. Waste name: BAG HOUSE DUSTS AND FILTER/SEPARATION SOLIDS FROM THE PRODUCTION OF CARBAMATES AND CARBAMOYL OXIMES.

. Waste code: K159
. Waste name: ORGANICS FROM THE TREATMENT OF THIOCARBAMATE WASTES.

. Waste code: K161
. Waste name: PURIFICATION SOLIDS (INCLUDING FILTRATION, EVAPORATION, AND CENTRIFUGATION SOLIDS), BAG HOUSE DUST AND FLOOR SWEEPINGS FROM THE PRODUCTION OF DITHIOCARBAMATE ACIDS AND THEIR SALTS. (THIS LISTING DOES NOT INCLUDE K125 OR K126).

. Waste code: K169
. Waste name: CRUDE OIL STORAGE TANK SEDIMENT FROM PETROLEUM REFINING OPERATIONS

. Waste code: K170
. Waste name: CLARIFIED SLURRY OIL TANK SEDIMENT AND/OR IN-LINE FILTER/SEPARATION SOLIDS FROM PETROLEUM REFINING OPERATIONS

. Waste code: K171
. Waste name: SPENT HYDROTREATING CATALYST FROM PETROLEUM REFINING OPERATIONS,INCLUDING GUARD BEDS USED TO DESULFURIZE FEEDS TO OTHER CATALYTIC REACTORS (THIS LISTING DOES NOT INCLUDE INERT SUPPORT MEDIA)

. Waste code: K172

Biennial Reports:

Last Biennial Reporting Year: 2013

Annual Waste Handled:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 0

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs): 0

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Corrective Action Summary:

Event date: 06/22/1992
Event: RFA Completed, Assessment was a PA-Plus.

Event date: 07/08/1992
Event: CA Prioritization, Facility or area was assigned a high corrective action priority.

Event date: 02/25/1995
Event: RFI Report Received

Event date: 08/27/1996
Event: Igration of Contaminated Groundwater under Control, Unacceptable migration of contaminated groundwater is observed or expected.

Event date: 08/27/1996
Event: Current Human Exposures under Control, Current human exposures are NOT under control.

Event date: 10/21/1998
Event: RFI Imposition

Event date: 09/04/2000
Event: RFI Workplan Received

Event date: 08/26/2003
Event: Igration of Contaminated Groundwater under Control, Yes, Migration of Contaminated Groundwater Under Control has been verified. Based on a review of information contained in the EI determination, it has been determined that migration of contaminated groundwater is under control at the facility. Specifically, this determination indicates that the migration of contaminated groundwater is under control, and that monitoring will be conducted to confirm that contaminated groundwater remains within the existing area of contaminated groundwater. This determination will be re-evaluated when the Agency becomes aware of significant changes at the facility.

Event date: 08/26/2003
Event: Current Human Exposures under Control, Yes, Current Human Exposures Under Control has been verified. Based on a review of information contained in the EI determination, current human exposures are

TRIUMVIRATE ENVIRONMENTAL MERRIMACK INC (Continued) **1000170150**

expected to be under control at the facility under current and reasonably expected conditions. This determination will be re-evaluated when the Agency/State becomes aware of significant changes at the facility.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of

ELECTRO CIRCUITS INC (Continued) **1000181345**

events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 03/07/2016

Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 03/07/2016

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 11/13/2015

Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

State and tribal Brownfields sites

BROWNFIELDS: Completed Brownfields Covenants Listing

Under Massachusetts law, M.G.L. c. 21E is the statute that governs the cleanup of releases of oil and/or hazardous material to the environment. The Brownfields Act of 1998 amended M.G.L. c. 21E by establishing significant liability relief and financial incentives to spur the redevelopment of brownfields, while ensuring that the Commonwealth's environmental standards are met. Most brownfields are redeveloped with the benefit of liability protections that operate automatically under M.G.L. c. 21E.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historic Dry Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

GEOCHECK ®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

LOWELL HIGH SCHOOL
50 FATHER MORISSETTE BLVD
LOWELL, MA 01852

TARGET PROPERTY COORDINATES

Latitude (North):	42.647097 - 42° 38' 49.55''
Longitude (West):	71.31045 - 71° 18' 37.62''
Universal Tranverse Mercator:	Zone 19
UTM X (Meters):	310595.2
UTM Y (Meters):	4724000.0
Elevation:	89 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5644820 LOWELL, MA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

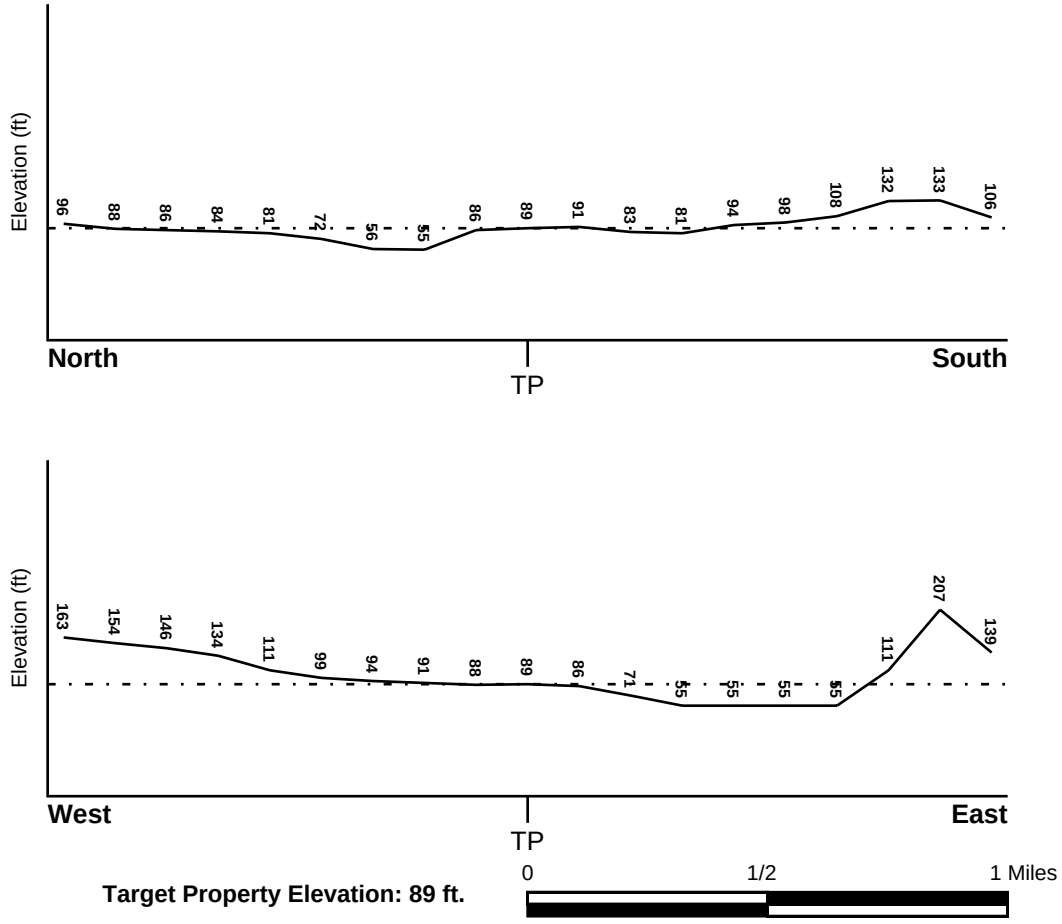
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Target Property Elevation: 89 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County	FEMA Flood Electronic Data
MIDDLESEX, MA	YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property: 25017C - FEMA DFIRM Flood data

Additional Panels in search area: Not Reported

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
EAST HALF OF LOWELL	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
1	1/8 - 1/4 Mile SW	SE
A8	1/2 - 1 Mile SE	NNE
9	1/2 - 1 Mile NW	NE

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Paleozoic
System:	Ordovian
Series:	Lower Paleozoic granitic rocks
Code:	Pzg1 *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Plutonic and Intrusive Rocks

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: fine sandy loam
silt loam
very fine sandy loam

Surficial Soil Types: fine sandy loam
silt loam
very fine sandy loam

Shallow Soil Types: No Other Soil Types

Deeper Soil Types: fine sandy loam
channery - silt loam
gravelly - loamy sand
silt loam
loamy fine sand
stratified
gravelly - sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: MassDEP
Telephone: 617-292-5907

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Massachusetts Geographic Information System (MassGIS) Datalayers
Source: Executive Office of Environmental Affairs

Public Water Supply Database: The Public Water Supply datalayer contains the locations of public community surface and groundwater supply sources and public non-community supply sources as defined in 310 CMR 22.00.

OTHER STATE DATABASE INFORMATION

Areas of Critical Environmental Concern Datalayer: The Areas of Critical Environmental Concern (ACEC) datalayer shows the location of areas that have been designated ACECs by the Secretary of Environmental Affairs. ACEC designation requires greater environmental review of certain kinds of proposed development under state jurisdiction within the ACEC boundaries. The ACEC Program is administered by the Department of Environmental Management (DEM) on behalf of the Secretary of Environmental Affairs. The Massachusetts Coastal Zone Management (MCZM) Office managed the original Coastal ACEC Program from 1978 to 1993, and continues to play a key role in monitoring coastal ACECs. Procedures for ACEC designation and the general policies governing the effects of designation are contained in the ACEC regulations (301 CMR 12.00). The ACEC datalayer has been compiled by MCZM and DEM and includes both coastal and inland areas.

EPA Designated Sole Source Aquifers Datalayer: The Sole Source Aquifer datalayer was compiled by the Department of Environmental Protection (DEP) Division of Water Supply (DWS). Seven Sole Source Aquifers have been designated by the US Environmental Protection Agency (EPA) for Massachusetts. A Sole Source Aquifer (SSA) is an aquifer designated by US EPA as the sole or principal source of drinking water for a given aquifer service area; that is, an aquifer which is needed to supply 50% or more of the drinking water for that area and for which there are no reasonably available alternative sources should that aquifer become contaminated. The aquifers were defined by a EPA hydrogeologist.

Aquifers Datalayer: MassGIS produced an aquifer datalayer composed of 20 individual panels, generally based on the boundaries of the major drainage basins. Areas of high and medium yield were mapped. This datalayer includes polygon attribute coding to help in the identification of areas in which cleanup of hazardous waste sites must meet drinking water standards, as defined in the Massachusetts Contingency Plan (MCP) (310 CMR 40.00000).

Non-Potential Drinking Water Source Areas: Non-Potential Drinking Water Source Areas (NPDWSA) are regulatory in nature, representing one of many considerations used in determining the standards to which ground water must be cleaned in the event of a release of oil or hazardous material. NPDWSAs are not based on existing water quality and do not indicate poor ambient conditions.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

DEP Approved Zone IIs Datalayer: The Department of Environmental Protection (DEP) approved Zone IIs datalayer was compiled by the DEP Division of Water Supply (DWS). The database contains 281 approved Zone IIs statewide. As stated in 310 CMR 22.02, a Zone II is "that area of an aquifer which contributes water to a well under the most severe pumping and recharge conditions that can be realistically anticipated (180 days of pumping at safe yield, with no recharge from precipitation.) It is bounded by the groundwater divides which result from pumping the well and by the contact of the aquifer with less permeable materials such as till or bedrock. In some cases, streams or lakes may act as recharge boundaries. In all cases, Zone IIs shall extend up gradient to its point of intersection with prevailing hydrogeologic boundaries (a groundwater flow divide, a contact with till or bedrock, or a recharge boundary)." These data are used in association with the Public Water Supplies datalayer. The following describes certain unique features of this association.

- Any proposed new well which will pump at least 100,000 gallons per day must have a Zone II delineation completed and approved by DEP prior to the well coming on line.
- Additionally, a new source may not be on-line yet, but other, older wells may fall within its Zone II boundary.
- Further, existing wells must have a Zone II delineated as a condition of receiving a water withdrawal permit under the Water Management Act.

Next Steps to Finalize Submission of your FY 2014 Statement of Interest

Thank you for submitting your FY 2014 Statement of Interest (SOI) to the MSBA electronically. **Please note, the District's submission is not yet complete**. The District is required to print and mail a hard copy of the SOI to the MSBA along with the required supporting documentation, which is described below.

Each SOI has two Certification pages that must be signed by the Superintendent, the School Committee Chair, and the Chief Executive Officer*. Please make sure that **both** certifications contained in the SOI have been signed and dated by each of the specified parties and that the hardcopy SOI is submitted to the MSBA with **original signatures**.

SIGNATURES: Each SOI has two (2) Certification pages that must be signed by the District.

In some Districts, two of the required signatures may be that of the same person. If this is the case, please have that person sign in both locations. Please do not leave any of the signature lines blank or submit photocopied signatures, as your SOI will be incomplete.

**Local chief executive officer: In a city or town with a manager form of government, the manager of the municipality; in other cities, the mayor; and in other towns, the board of selectmen unless, in a city or town, some other municipal office is designated as the chief executive office under the provisions of a local charter.*

VOTES: Each SOI must be submitted with the proper vote documentation. This means that (1) the required governing bodies have voted to submit each SOI, (2) the specific vote language required by the MSBA has been used, and (3) the District has submitted a record of the vote in the format required by the MSBA.

- **School Committee Vote:** Submittal of all SOIs must be approved by a vote of the School Committee.
  - For documentation of the vote of the School Committee, Minutes of the School Committee meeting at which the vote was taken must be submitted with the original signature of the Committee Chairperson. The Minutes must contain the actual text of the vote taken which should be substantially the same as the MSBA's SOI vote language.
- **Municipal Body Vote:** SOIs that are submitted by cities and towns must be approved by a vote of the appropriate municipal body (e.g., City Council/ Aldermen/Board of Selectmen) in addition to a vote of the School Committee.
  - Regional School Districts do not need to submit a vote of the municipal body.
  - For the vote of the municipal governing body, a copy of the text of the vote, which shall be substantially the same as the MSBA's SOI vote language, must be submitted with a certification of the City/Town Clerk that the vote was taken and duly recorded, and the date of the vote must be provided.

CLOSED SCHOOLS: Districts must download the report from the "Closed School" tab, which can be found on the District Main page. Please print this report, which then must be signed by the Superintendent, the School Committee Chair, and the Chief Executive Officer. A signed report, with original signatures must be included with the District's hard copy SOI submittal. **If a District submits multiple SOIs, only one copy of the Closed School information is required.**

ADDITIONAL DOCUMENTATION FOR SOI PRIORITIES #1 AND #3: If a District selects Priority #1 and/or Priority #3, the District is required to submit additional documentation with its SOI.

- If a District selects Priority #1, Replacement or renovation of a building which is structurally unsound or otherwise in a condition seriously jeopardizing the health and safety of the school children, where no alternative exists, the MSBA requires a hard copy of the engineering or other report detailing the nature and severity of the problem and a written professional opinion of how imminent the system failure is likely to manifest itself. The District also must submit photographs of the problematic building area or system to the MSBA.
- If a District selects Priority #3, Prevention of a loss of accreditation, the MSBA requires the full accreditation report(s) and any supporting correspondence between the District and the accrediting entity.

ADDITIONAL INFORMATION: In addition to the information required with the SOI hard copy submittal, the District may also provide any reports, pictures, or other information they feel will give the MSBA a better understanding of the issues identified at a facility.

If you have any questions about the SOI process please contact Brian McLaughlin at 617-720-4466 or Brian.McLaughlin@massschoolbuildings.org.

Submission Date 4/10/2014

SOI CERTIFICATION

To be eligible to submit a Statement of Interest (SOI), a district must certify the following:

- ☑ The district hereby acknowledges and agrees that this SOI is NOT an application for funding and that submission of this SOI in no way commits the MSBA to accept an application, approve an application, provide a grant or any other type of funding, or places any other obligation on the MSBA.
- ☑ The district hereby acknowledges that no district shall have any entitlement to funds from the MSBA, pursuant to M.G.L. c. 70B or the provisions of 963 CMR 2.00.
- ☑ The district hereby acknowledges that the provisions of 963 CMR 2.00 shall apply to the district and all projects for which the district is seeking and/or receiving funds for any portion of a municipally-owned or regionally-owned school facility from the MSBA pursuant to M.G.L. c. 70B.
- ☑ The district hereby acknowledges that this SOI is for one existing municipally-owned or regionally-owned public school facility in the district that is currently used or will be used to educate public PreK-12 students and that the facility for which the SOI is being submitted does not serve a solely early childhood or Pre-K student population.
- ☑ After the district completes and submits this SOI electronically, the district must sign the required certifications and submit one signed original hard copy of the SOI to the MSBA, with all of the required documentation described under the "Vote" tab, on or before the deadline.
- ☑ The district will schedule and hold a meeting at which the School Committee will vote, using the specific language contained in the "Vote" tab, to authorize the submission of this SOI. This is required for cities, towns, and regional school districts.
- ☑ Prior to the submission of the hard copy of the SOI, the district will schedule and hold a meeting at which the City Council/Board of Aldermen or Board of Selectmen/equivalent governing body will vote, using the specific language contained in the "Vote" tab, to authorize the submission of this SOI. This is not required for regional school districts.
- ☑ On or before the SOI deadline, the district will submit the minutes of the meeting at which the School Committee votes to authorize the Superintendent to submit this SOI. The District will use the MSBA's vote template and the vote will specifically reference the school and the priorities for which the SOI is being submitted. The minutes will be signed by the School Committee Chair. This is required for cities, towns, and regional school districts.
- ☑ The district has arranged with the City/Town Clerk to certify the vote of the City Council/Board of Aldermen or Board of Selectmen/equivalent governing body to authorize the Superintendent to submit this SOI. The district will use the MSBA's vote template and submit the full text of this vote, which will specifically reference the school and the priorities for which the SOI is being submitted, to the MSBA on or before the SOI deadline. This is not required for regional school districts.
- ☑ The district hereby acknowledges that this SOI submission will not be complete until the MSBA has received all of the required vote documentation and certification signatures in a format acceptable to the MSBA.

Chief Executive Officer *	**School Committee Chair**	**Superintendent of Schools**
Michael Q. Geary	Rodney M. Elliott	Jean M. Franco
Acting City Manager

School District Lowell

District Contact Jay Lang TEL: (978) 674-2020

Name of School Lowell High

Submission Date 4/10/2014

Note

The following Priorities have been included in the Statement of Interest:

1. ☐ Replacement or renovation of a building which is structurally unsound or otherwise in a condition seriously jeopardizing the health and safety of school children, where no alternative exists.
2. ☐ Elimination of existing severe overcrowding.
3. ☐ Prevention of the loss of accreditation.
4. ☑ Prevention of severe overcrowding expected to result from increased enrollments.
5. ☐ Replacement, renovation or modernization of school facility systems, such as roofs, windows, boilers, heating and ventilation systems, to increase energy conservation and decrease energy related costs in a school facility.
6. ☐ Short term enrollment growth.
7. ☑ Replacement of or addition to obsolete buildings in order to provide for a full range of programs consistent with state and approved local requirements.
8. ☐ Transition from court-ordered and approved racial balance school districts to walk-to, so-called, or other school districts.

SOI Vote Requirement

☑ I acknowledge that I have reviewed the MSBA's vote requirements for submitting an SOI which are set forth in the Vote Tab of this SOI. I understand that the MSBA requires votes from specific parties/governing bodies, in a specific format using the language provided by the MSBA. Further, I understand that the MSBA requires certified and signed vote documentation to be submitted with the SOI. I acknowledge that my SOI will not be considered complete and, therefore, will not be reviewed by the MSBA unless the required accompanying vote documentation is submitted to the satisfaction of the MSBA.

Potential Project Scope: Potential New School

Is this SOI the District Priority SOI? YES

School name of the District Priority SOI: 2014 Lowell High

Is this part of a larger facilities plan? YES

If "YES", please provide the following:

Facilities Plan Date: 2/28/2014

Planning Firm: OMR Architects

Please provide an overview of the plan including as much detail as necessary to describe the plan, its goals and how the school facility that is the subject of this SOI fits into that plan:

In April 2013, OMR Architects was hired to prepare a Comprehensive Facilities Assessment and Master Plan which included 29 Lowell school facilities- elementary, middle, PK-8, high, alternative, day and the adult education center. The goals of the study were: 1) Perform a Physical and Programmatic Assessment of the Lowell Public School facilities, and 2) Develop a 10 Year Master Plan for critical maintenance, renovations and additions and/or building replacements. The facilities assessment and master plan included: reviewing the schools and their relationships within the City of Lowell and their defining neighborhoods; analyzing the existing conditions of all of the facilities (architecture, site, structure, MEP/FP) and providing baseline repair estimates; three educational visioning sessions with school and district administration and educational leaders to set the goals and values for the master plan study; analysis of NESDEC enrollment projections for ten years; educational programming space analysis comparing the existing and projected population and facilities to MSBA guidelines; understanding site availability in Lowell; developing multiple masterplan options and comparing these with cost and value; developing preferred options; and developing a 10 year capital plan for the design and construction work of this report. The Lowell High School fits into the Masterplan as the Preferred Solution Option 1D/E with a total project cost of $245.4M, not including escalation or land acquisition. This 650,000 GSF solution requires the possession of adjacent land and includes an addition/ demolition/ renovation/ repurposing response to the existing Lowell High School facilities. The same Masterplan includes the Elementary, Middle & K-8 School Preferred Solution of Option 1H with a total project cost of $270M, not including escalation or land acquisition. This solution includes: additions and renovations to Wang, Daley and Robinson Middle Schools to make eight-strand schools serving 792 students each; an addition/ renovation/ conversion of Rogers School to be a four-strand PK-8 facility serving 960 students; a new, four-strand PK-8 facility serving 960 students; and major and minor repairs of 23 other school facilities.

Please provide the current student to teacher ratios at the school facility that is the subject of this SOI: 28 students per teacher

Please provide the originally planned student to teacher ratios at the school facility that is the subject of this SOI: 24 students per teacher

Does the District have a Master Educational Plan that includes facility goals for this building and all school buildings in District? YES

If "YES", please provide the author and date of the District's Master Educational Plan.

OMR Architects February 28, 2014

Is there overcrowding at the school facility? YES

If "YES", please describe in detail, including specific examples of the overcrowding.

This is projected overcrowding. The school district's projected enrollment is significantly higher than the current 2013-2014 enrollment of 3,134 students in grades 9-12. NESDEC's 10-year average enrollment projection for the Lowell Public School District shows a need for the high school sized appropriately to house 3,424 in the 10 year projected average, but with a high in 2022-2023 of 3,900 students in grades 9-12 and no expectation for the PK-8 enrollment to go down in the subsequent years, the committee feels that 3,900 students is the appropriate size for the facility. Overall, there is a documented space need for approximately 2,500 additional seats in the entire Lowell Public School system in the upcoming years.

See NESDEC enrollment projections attachments.

Has the district had any recent teacher layoffs or reductions? NO

If "YES", how many teaching positions were affected? 0

At which schools in the district?

Please describe the types of teacher positions that were eliminated (e.g., art, math, science, physical education, etc.).

Has the district had any recent staff layoffs or reductions? NO

If "YES", how many staff positions were affected? 0
At which schools in the district?
Please describe the types of staff positions that were eliminated (e.g., guidance, administrative, maintenance, etc.).

Please provide a description of the program modifications as a consequence of these teacher and/or staff reductions, including the impact on district class sizes and curriculum.

Does not apply.

Please provide a detailed description of your most recent budget approval process including a description of any budget reductions and the impact of those reductions on the district's school facilities, class sizes, and educational program.

On June 5, 2013, the Lowell School Committee approved the FY2014 annual operating budget of $144,360,281, a 4.28% increase over FY2013. There were no budget reductions impacting the school district’s facilities, class sizes or educational programs.

General Description

BRIEF BUILDING HISTORY: Please provide a detailed description of when the original building was built, and the date(s) and project scopes(s) of any additions and renovations (maximum of 5000 characters).

The Lowell High School facilities are comprised of multiple buildings located on a few city blocks crossing a canal in the Downtown neighborhood. The original 1892 building was added to in 1922 and renovated in 1971 and 1997 (minor), and included a large interior light well at the intersection of the two brick buildings. The 1980 facility is made up of an educational wing and a field house wing connected by lobby spaces and circulation, and was renovated in 1997. These two buildings, the 1892/1922 and the 1980, are connected by two enclosed, glazed bridges which span across the canal and park below. The Freshman Academy, a completely separate structure, is one city block away. Built in 1900 and added on in 1939, it was renovated in 1986. Ninth grade students typically walk along a less dense urban street to access specialty classrooms and the physical education spaces in the main buildings. The Freshman structure also houses their own cafeteria and theater. The Steam Plant, original construction unknown but renovated in 1996, which serves the entire complex, is located between the Freshman Academy and the 1920 facility, and is connected to the Freshman Academy above ground by overhead pipes and to the 1920 Building with a utilities tunnel under Kirk Street.

Outdoor athletic facilities are located in multiple locations including Cawley Stadium and Shedd Park to the southeast of the school, the Lowell Boathouse to the west, and Mount Pleasant Golf Course to the southwest. All are accessible only by bus or car.

Lowell Freshman Academy- 3 stories (1 is below grade)
Lowell HS Steam Plant - 1 story
Lowell High School - 1922 Building (Kouloheras) - 3 stories (1 is below grade)
Lowell High School - 1980 Buildings (Lord & Fieldhouse) – 3 stories

Scope of Renovations include: New windows and storefront systems were retrofitted to the existing 1892 and 1922 Buildings in 1980 and in 1995, respectively. Extensive renovations of the interiors of the 1892 and 1922 Buildings were included in the scope of the 1995 addition. These renovations succeed in updating many of the interior finishes as well as creating uniformity of finish materials between the new and existing. The scope of these renovations was limited to the academic floors and many spaces particularly on the lower level were left untouched. The auditorium was fully renovated including a new mechanical system with air conditioning. A new mezzanine was constructed in the upper part of the 1892 Building which serves as a suite for faculty work, lounge and dining. The upper part of this space is not accessible.

The Freshman Academy was repurposed and fully renovated in 1986. These renovations at the lowest level included the creation of a small theatre and a cafeteria dedicated to the freshman student population. The 1986 project included targeted renovations on the upper levels for academics, science, library, computer labs and faculty spaces. Most spaces were renovated to varying degrees at this time.

The 1980 Building has been maintained over the years but has not been renovated. Most finishes and systems are original with some notable exceptions: 1) the roof top mechanical systems have been recently upgraded, unfortunately, these upgrades have not been very effective. 2) There has been a concerted effort to replace existing carpet in most academic areas with vinyl tile. 3) Toilet rooms benefit from ongoing maintenance with the exception of the Locker/Showers which require full and major renovation.

TOTAL BUILDING SQUARE FOOTAGE: Please provide the original building square footage PLUS the square footage of any additions.

628558

SITE DESCRIPTION: Please provide a detailed description of the current site and any known existing conditions that would impact a potential project at the site. Please note whether there are any other buildings, public or private, that share this current site with the school facility. What is the use(s) of this building(s)? (maximum of 5000 characters).

Lowell High School sits on two parcels on municipally owned land totaling 243,000 square feet. In addition to the 1922 and
1980 buildings, a third building located across (and not connected) the street houses the Lowell High School Freshman Academy. The LHS Freshman Academy sits on a 10,000 square foot parcel.

The site for the steam plant is shared with the National Park Service Building and the exact limits of the site are unknown. Zoning is Downtown Mixed Use District. See site plan and existing conditions analysis attachments.
Context:
- Generally a flat site(s) fully developed and bordered either by city streets or adjacent properties. The High School occupies three separate distinct parcels that form the campus. The campus is divided by a canal, or in the case of the Freshman Academy, a city street. Students and staff are required to cross a city street or traverse the second story bridges to travel between buildings.
- All drop-off / pick-up takes place on the adjacent city streets and sidewalks. This creates serious traffic and safety issues.
- There is a city owned parking garage across a main street that serves both staff and students. There is metered, on street parking for visitors. There is little or no onsite parking.
- There is a discrete loading dock for deliveries and trash/recycling located to the southeast end of the campus. Access is from Father Morissette Blvd.
- Fire lane and emergency access to all buildings is good.
Surfaces and Features:
- There are a number of paved courtyards and walks adjacent to the main entrance and the cafeteria. The condition of these courtyards varies greatly from good to poor. The existing canal between the two main buildings is landscaped on each side and provides for a pleasant urban park like atmosphere. Unfortunately, there is also a Trolley for tourist and visitors to Lowell that parallels one side of the canal and further divides and separates the main campus. There are two connecting enclosed bridges at the second floor that span the trolley tracks and the canal to accommodate pedestrian traffic between the two buildings.
- The constrained site does not provide for any outside athletic or physical education opportunities.
- No apparent site drainage issues were identified. Drainage is handled by the city storm system.

Lowell Freshman Academy- 92,758 SF (1900 & 1939 portions)
Lowell HS Steam Plant – 2,500 SF, no additions
Lowell High School - 1922 Building (Kouloheras) – 322,000 (whole facility)
Lowell High School - 1980 Buildings (Lord & Fieldhouse) – 211,300 GSF, no additions
TOTAL: 628,558 GSF

ADDRESS OF FACILITY: Please type address, including number, street name and city/town, if available, or describe the location of the site. (Maximum of 300 characters)

Lowell Freshman Academy, 40 Paige Street, Lowell, MA 01852
Lowell HS Steam Plant, Paige Street, Lowell, MA 01852
Lowell High School - 1922 Building (Kouloheras), 50 Father Morissette Blvd, Lowell MA 01852
Lowell High School - 1980 Buildings (Lord & Fieldhouse), 50 Father Morissette Blvd, Lowell M

BUILDING ENVELOPE: Please provide a detailed description of the building envelope, types of construction materials used, and any known problems or existing conditions (maximum of 5000 characters).

Exterior Envelope:
- Exterior windows appear to be in fair to poor condition with a few exceptions; plastic lexan glazing and insulated units

with broken seals should be replaced. In most cases the operable hardware needs to be replaced or maintained. Security screens should be replaced or refurbished. Perimeter sealants and glazing beads for the most part are in need of replacement. Buildings have brick veneers in all cases. Size and type of brick varies depending on the age of the building or addition. Some buildings/additions have traditional masonry back up while the newer buildings have metal studs. The condition of the exterior envelope is generally good with limited, but specific some areas requiring immediate attention. Interestingly, the older buildings in many cases are faring better than the newer construction.
- Painted/anodized aluminum door and frames generally appear to be in poor condition with a couple of exceptions. Painted steel door frames with transoms have failed. In general all storefront/curtain wall systems require maintenance and/or replacement. The fixed acrylic glazing for one of the two bridges is in good condition the other bridge will require re-glazing at some point in the future.
- All exterior door hardware is in fair to poor condition and should be replaced or repaired.
- Buildings have brick veneers in all cases. Size and type of brick varies depending on the age of the building or addition. Some buildings/additions have traditional masonry back up while the newer buildings have metal studs. The condition of the exterior envelope is generally good but with limited areas requiring immediate attention. Interestingly, the older buildings in many cases are faring better than the newer construction. The spit faced concrete block at the 1980's Building is in good condition. Existing cement asbestos cladding needs attention and/or replacement in some cases. The lintels over openings in the 1922 building appear to be compromised and should be investigated for potential repair and/or replacement. Existing skylights are original to the 1922 Building and need replacement. The Kalwall translucent glazing within the lightwell has far exceed it useful life and should be replaced.
Roof:
- The roofing membranes/flashings vary in age and condition. Most roofs are in fair condition with one notable exception; a large area of the 1922 Building has failed. In contrast, the pitched (and flat) roof of the 1892 building has been recently been replaced with artificial slate and new copper gutters/leaders. The workmanship is of the highest quality. The field house has a sloped corrugated metal roof with built in gutters and downspouts that appear to have reached or exceeded their life expectancy. Some sections of the built in gutter have failed and have damaged the façade. Ponding is occurring in many flat roof locations. Roof drains appear to be clogged in some locations and will require periodic maintenance.

Has there been a Major Repair or Replacement of the EXTERIOR WALLS ? NO
Year of Last Major Repair or Replacement: 1995
Description of Last Major Repair or Replacement:
Partial window and entrance retrofits and other miscellaneous projects.

Has there been a Major Repair or Replacement of the ROOF? YES
Year of Last Major Repair or Replacement: 2012
Type Of ROOF: EPDM/Slate(2012)/Metal - Partial replacement and repair.
Description of Last Major Repair or Replacement:
A full replacement of the slate roof on the 1892 Building. This is a small portion of the high school roof, the other sections have not been repair or replaced.

Has there been a Major Repair or Replacement of the WINDOWS? YES
Year of Last Major Repair or Replacement: 1995
Type Of WINDOWS: Aluminum, single hung
Description of Last Major Repair or Replacement:
New windows retrofit in 1980 and 1996 in the 1922 Bldg.

MECHANICAL and ELECTRICAL SYSTEMS: Please provide a detailed description of the current mechanical and electrical systems and any known problems or existing conditions (maximum of 5000 characters).

MEPFP: Freshman Academy
FIRE PROTECTION - There are areas of the building without coverage of a wet sprinkler system. The system should be supplemented to cover all areas of the building.
HVAC- Heating and ventilating units are in fair to poor condition. Heat exchangers show signs of having corrosion. Both will be required to be replaced in the near future. It is recommended that the present pneumatic automatic temperature controls be replaced with a DDC system. Exhaust systems should be replaced.

ELECTRICAL - The main service is in poor condition and should be replaced. Branch circuits are in fair condition except neutral conductors appear to be shared and many outlets that are near sinks are not GFCI protected. These items should be corrected. There is no emergency source of power. It is recommended that an emergency generator be provided. The fire alarm system is in poor condition and should be replaced. Lighting fixtures have recently been upgraded with more energy efficient lamps and ballasts, however there are a number of damaged fixtures which should be replaced.

MEPFP: 1922 and 1980 Buildings
FIRE PROTECTION- The building is mostly protected with an automatic dry sprinkler and wet stand pipe system. Sprinklers should be added at areas without coverage.
HVAC- Steam from the boiler plant is converted to hot water which serves fin tube radiators throughout the building. Gas fired roof top units provide ventilation for the building. Cooling for the auditorium is provided by rooftop units and a chiller. These systems are in fair condition. However the heat exchangers and circulation pumps are corroded and will need to be replaced soon. The automatic temperature controls system should be supplemented with DDC thermostats. All pneumatic control systems should be replaced with new DDC systems.
ELECTRICAL – The main service installed in 1990 is in fair condition but the secondary switch board which dates earlier should be replaced. Panel feeders are in fair condition but panel boards should be replaced. Branch circuits require updating to separate neutral conductors. Lighting fixtures are in fair condition. Lamping and ballasts have recently been updated. Emergency power is provided by a generator located in the Boiler Plant. An abandoned generator in the basement should be removed. It is recommended that the clock and paging systems be replaced.
The fire alarm system is outdated and should be replaced.

Has there been a Major Repair or Replacement of the BOILERS? NO
Year of Last Major Repair or Replacement: 1996
Description of Last Major Repair or Replacement:
Units were retubed in 2009

Has there been a Major Repair or Replacement of the HVAC SYSTEM ? NO
Year of Last Major Repair or Replacement: 2005
Description of Last Major Repair or Replacement:
Several roof top units on the 1980 Building were replaced in 2005

Has there been a Major Repair or Replacement of the ELECTRICAL SERVICES AND DISTRIBUTION SYSTEM? NO
Year of Last Major Repair or Replacement: 1997
Description of Last Major Repair or Replacement:
Several sections of the High School were upgraded as part of the 1997 Renovation

HEATING FUEL: Which of the heating fuel types below does your building primarily rely on for heating?

Natural Gas

BUILDING INTERIOR: Please provide a detailed description of the current building interior including a description of the flooring systems, finishes, ceilings, lighting, etc. (maximum of 5000 characters).

Finishes:
- Masonry and GWB walls require painting especially corridors and shared core spaces.
- Sagging and damaged acoustic ceilings systems should be replaced – condensation and/or roof leaks above ceilings require repair.
- Carpet is being replaced in many locations with resilient tile as part of an ongoing project.
- VCT in fair to good condition in many areas and new in others – replace damaged tiles as needed.
- Given the age and the number of buildings there are many different floor finishes and, of course, their condition varies greatly. Generally, wood, older ACT and VCT, rubber and sheet vinyl floors are in poor condition. Terrazzo floors are old but are in good condition except for an occasional crack. Existing painted concrete floors in the basement of the 1922 Building are spauling with shrinkage and settlement cracks. Ceramic tile floors (and walls) are recent for the most part with

the notable exception of the locker/shower rooms in the Fieldhouse. Most of these spaces (toilet rooms) benefit from an ongoing maintenance commitment. This includes toilet partitions and accessories.
- Gymnasium synthetic flooring is in fair to fair/poor condition. Floor needs courts and lanes to be restriped. The synthetic floor extends into the lobby area and has failed due to excessive traffic.
- Casework/Millwork and hardware conditions vary greatly from poor to good depending on location and age. Millwork is non-conforming to current ADA/MAAB requirements.
Openings:
- The condition of interior doors and hardware vary greatly depending on age and location. In many cases the hardware is non-conforming. It should be noted that the oldest buildings date back to the late 1800's and early 1900's the doors and frames are original to that period. Other locations are as new as 1980 and 1995 and, as would be expected, in good conditions and mostly conforming. Unfortunately, this represents only about half of the overall campus.
- Hollow metal door and frames should be painted and/or replaced
- Magnetic hold open devices require repair and/or replacement at some locations
Vertical Circulation:
- There are a total of 4 elevators. Three of which are old and non-conforming. The elevator in the oldest building is the newest and is in good condition.
- Stairs handrails and guardrails do not meet current building code requirements and should be modified.
- Access to stage is by way of a lift and meet currents ADA/MAAB requirements. There is handicapped seating in the auditorium. The balcony and control booth are not accessible.
Lighting: in general is in fair condition. Classrooms consist of continuous rows of surface fluorescent wrap around type fixtures with a (2) lamp cross section electronic ballast powering 32WT8 lamps. The gymnasium fixtures have recently been upgraded to (4) lamp T5HO high bays with occupancy sensors and wire guards. Library fixtures are pendant direct/indirect (2) lamp cross section with electronic ballasts and 32WT8 lamps. Corridors consist of recessed fluorescent 2X2 fixtures with acrylic lens. The auditorium house lighting contains fluorescent strips mounted in coves for indirect lighting and incandescent PAR down lights. General areas consist of surface mounted 2X2's and 8" fluorescent down lights. Light levels seem adequate. Lighting control consists of occupancy sensors in the classrooms and time clocks for exterior lighting. All other lights are controlled with local live voltage switching.

PROGRAMS and OPERATIONS: Please provide a detailed description of the current programs offered and indicate whether there are program components that cannot be offered due to facility constraints, operational constraints, etc. (maximum of 5000 characters).

Lowell High School currently serves approximately 3,200 students and employs 400 full-time staff members. LHS provides a comprehensive high school offering of programs for all Lowell Public School students in grade 9 – 12, as well as ROTC, Culinary arts, and swimming. In particular, the science related program offerings are constrained due to outdated and inadequate education spaces with the buildings. The facility also houses city-wide services programmed for the students including a community health center, bank, CCTV, DARE, UP and a thrift shop. See space summary attachment.

CORE EDUCATIONAL SPACES: Please provide a detailed description of the Core Educational Spaces within the facility, a description of the number and sizes (in square feet) of classrooms, a description of science rooms/labs including ages and most recent updates, and a description of the media center/library (maximum of 5000 characters).

The core educational space of Lowell High School is spread across three separate buildings, two of which are connected via two above ground tunnels. The third building, which houses only 9th graders, is a standalone academic building.

The original building, consists of 77 traditional classrooms, 2 computer labs, 1music lab, 1 digital photography lab, 1 graphic design lab, and 1 language lab (currently not in working order). The average square footage of a traditional classroom in this building is approximately 850 square ft. There are no dedicated science labs in this building. The designated chemistry lab is within a classroom. There is working gas, with working gas lines. The total square footage of workable lab space in this room is 480 square ft. There is no fume hood installed in this room. There have been no major

updates or renovations to this lab/room in the past 25 years.

The second building which was constructed in 1980 has 34 classrooms and 2 dedicated computer labs. This building also houses the LHS television studio. The average square footage of a traditional classroom in this building is approximately 661 square ft. The 1980 building has 4 dedicated science labs. The total size of the four science labs is 3,083 square ft. One of the labs has working gas and a fume hood. One of these labs has an inoperable fume hood. The four science labs have not been updated since the original build out in 1980.

The 3rd building, designated as the Freshman Academy is a standalone academic facility. This building has 37 traditional classrooms and two computer labs. The average size of the traditional classrooms in this building is approximately 730 square ft. There is one dedicated room for science experiences, this room has running water. There are no eye wash stations or fume hoods in this lab. This room was a former home economics room, and has never been fully updated as a dedicated science lab.

The Lowell High School Media Center is located in the 1980 building. The media center has 10 computer stations for student use. The Media Center was last updated in 1997. One of the dedicated computer labs is off the back of the media center.

CAPACITY and UTILIZATION: Please provide a detailed description of the current capacity and utilization of the school facility. If the school is overcrowded, please describe steps taken by the administration to address capacity issues. Please also describe in detail any spaces that have been converted from their intended use to be used as classroom space (maximum of 5000 characters).

Lowell High School currently serves approximately 3,200 students and employs 400 full-time staff members. LHS provides a comprehensive high school offering of programs for all Lowell Public School students in grade 9 – 12.

See space summary attachment.

MAINTENANCE and CAPITAL REPAIR: Please provide a detailed description of the district's current maintenance practices, its capital repair program, and the maintenance program in place at the facility that is the subject of this SOI. Please include specific examples of capital repair projects undertaken in the past, including any override or debt exclusion votes that were necessary (maximum of 5000 characters).

The district is responsible for the daily cleaning and maintenance of the School, while the City of Lowell DPW is responsible for the major repairs associated with the school facility. The Lowell Public Schools employs a full-time custodial crew of twenty (20) building custodians to clean and maintain the facilities on a daily basis. The City of Lowell Department of Public Works (DPW) provides for the repair of broken furnishings and equipment and major repairs. The district, in conjunction with the City of Lowell, prepares an annual capital plan for inclusion in the City's overall budget. The Lowell Public Schools has recently concluded a comprehensive facilities assessment with the assistance of OMR Architects to assess and document the needs of each school facility city-wide. A copy of the facilities assessment pertaining to this school is attached to the SOI to serve as additional backup for consideration of this project. No overrides or debt exclusion votes have been necessary in the past to fund school related capital projects with the MSBA's assistance.

Priority 4

Question 1: Please describe the conditions within the community and School District that are expected to result in increased enrollment.

The school district projected enrollment is significantly higher than the current 2013-2014 enrollment of 11,043 students in grades PK-8 and 3,134 students in grades 9-12. NESDEC's 10-year average enrollment projection for the Lowell Public School District shows a need for school buildings sized appropriately to house 11,811 students in grades PK-8 and 3,900 students in grades 9-12. In addition, givenLowell's complex, district-wide, school assignment policy and regular mid-year fluctuation of class sizes, it is recommended that 15 additional swing classrooms be provided in the PK-8 space program across the district.

Understanding the current overcrowding situation though, the elementary, middle and PK-8 schools are showing physical space needs across the board in most student-designated spaces, especially in core academic classrooms due to the current overcrowding. Grades K-4 are currently overcrowded by 593 students and based on enrollment projections will be overcrowded by 924 students in the next four years. Grades 5-8 are currently overcrowded by 594 students and based on enrollment projections will be overcrowded by 1,174 students in the next six years. Add to this the 15 swing classroom need. Therefore with the projected population added into the already overcrowded classrooms, there is a documented space need for approximately 2,500 additional seats in theLowellPublic Schoolsystem in the upcoming years.

Given the confirmed need to expand the grade PK-8 schools by 2,500 additional seats, it is agreed that it will be necessary to build additional school buildings or a comprehensive expansion of the existing facilities. There is a desire to keep the strand sizes small and keep school enrollments below 1,000 students at grades PK-8, but there is also a scarcity of suitable land to build additional schools in the City ofLowell. The committee considered moving PK out of the elementary and middle schools and consolidating those services in smaller facilities around the city. And they considered reconfiguring the existing schools to place fifth graders in the elementary schools. Each of these reconfiguration solutions freed up existing square footage to accommodate more students in the current facilities, but the City feels most comfortable retaining the PK in the schools and maintaining the existing grade configuration. The continuation of increasing enrollment throughoutLowellwill mean that the district will need to bring in modular classrooms in subsequent years to many of the PK-8 facilities. There is little space to build new in the City, busing around the city is too expensive and parents want neighborhood schools.

This may seem to not affect the high school, but knowing the full needs of the total school district system, provides a complete understanding of the much larger problem thatLowellfaces in the next decade. Since every child inLowellgoes through the one high school, the city feels that this grouping of buildings has the most need at this time.

Priority 4

Question 2: Please describe the measures the School District has taken or is planning to take in the immediate future to mitigate the problem(s) described above.

The school district and the city recognize the issue of current and projected overcrowding. The district began by hiring OMR Architects to analyze the bigger issues of the existing facilities and develop a 10 year plan to resolve the issues in a systematic fashion. Coupled with that was the enrollment changes that were discovered during the process as what once was thought of as an enrollment bubble, seems to have become a constant that is more significant than can be handled with minor classroom changes. In addition, this summer, the district is planning on renovating the Rogers PK-K school (once served as a middle school and now houses district offices and some PK-K) to take on the developing elementary school problem in a systematic fashion.

There is only one high school in Lowell, made up of multiple buildings. It is at the center of the city. There is overwhelming support to keep it in the city center for a number of reasons including: it is a historical building; one unified school is important to school pride; busing to multiple locations is reduced as there is a city bus system used by many students; location near UMASS Lowell and the City Municipal buildings brings opportunities for the students and the education; the urban presence of the school adds to the pride of the city; parking for students and teachers is simplified by city parking garages; and building a new school for 3,900 students is cost prohibitive. Knowing that these school parcels are important to theLowellSchool District, they are discussing acquiring a small parcel of land to the SW of the current 1980 facility to help with future construction phasing. The Lowell Planning Department has also started considering the extension ofDutton Streetto meet up withFather Morrisette Blvd, if the 1980s building is demolished. This would allow a safer drop-off and pick up scenario for students in the future.

Priority 4

Question 3: Please provide a detailed explanation of the impact of the problem described in this priority on your district's educational program. Please include specific examples of how the problem prevents the district from delivering the educational program it is required to deliver and how students and/or teachers are directly affected by the problem identified.

Students and teachers are directly affected as the available room for instruction is reduced. This is felt within the regular education classrooms and special population classrooms. Small rooms and/or spaces for teachers to meet in small groups or for 1:1 instruction are very difficult to come by in the facility. The school facility also lacks dedicated spaces for required services (OT/PT, speech, etc.) to be delivered to students. The school is at capacity for adding additional sub-separate programs, such as CSA (autism) classrooms to provide instruction in the district as opposed to tuitioning CSA students to out-of-district placements.

Please also provide the following:

Cafeteria Seating Capacity:	350
Number of lunch seatings per day:	8
Are modular units currently present on-site and being used for classroom space?:	NO

If "YES", indicate the number of years that the modular units have been in use:
Number of Modular Units:
Classroom count in Modular Units:
Seating Capacity of Modular classrooms:
What was the original anticipated useful life in years of the modular units when they were installed?:

Have non-traditional classroom spaces been converted to be used for classroom space?:	NO

If "YES", indicate the number of non-traditional classroom spaces in use:
Please provide a description of each non-traditional classroom space, its originally-intended use and how it is currently used (maximum of 1000 characters).:

Please explain any recent changes to the district's educational program, school assignment polices, grade configurations, class size policy, school closures, changes in administrative space, or any other changes that impact the district's enrollment capacity (maximum of 5000 characters). :

As a short-term measure to reduce current class size enrollment at the elementary school grade levels, the Lowell School Committee recently voted to re-open the Rogers School to serve students in grades Pre-K – 2 for the upcoming 2014/15 school year. This is a short-term solution to begin to address overcrowding at the elementary school level, however when this population reaches the 5th grade at the start of the 2016/17 school year, the current middle school configuration (number of classes) will not be able to accommodate the entering 5th grade students.

What are the district's current class size policies (maximum of 500 characters)?:

There are no class size policies, but the preferred class sizes are 20-22 at elementary, 22-24 at middle and under 25 at high school. The preferred school strand sizes are four at elementary schools, six at middle schools and two at Washington, Moody and K-8 schools. To solve the overcrowding issue, and due to the lack of available land, there is a willingness to expand middle schools to eight strand and K-8 to four strand schools with additions.

Priority 7

Question 1: Please provide a detailed description of the programs not currently available due to facility constraints, the state or local requirement for such programs, and the facility limitations precluding the programs from being offered.

With the current overcrowding conditions -- which has intensified the problematic issues with the existing conditions of the buildings related to maintenance, building systems and other larger capital projects -- and the magnitude of the future enrollment projections, and the changing methodologies and space needs necessary to meet 21st century teaching and learning standards, there is a significant shortfall in the current net and gross square footage in the great majority of the Lowell school buildings, including the high school.

Coupled with this is the desire to bring special needs students and their associated programs, back into this school for a better educational environment for the students and teachers. Currently, many special needs students are displaced for partial semesters to one of the alternative or day schools in the city, and are brought back into the mainstream at different intervals throughout the year. This disrupts the educational experience for all the students and contributes to additional and sometimes unplanned overcrowding in classrooms throughout the school year. Additions to this school should include much needed special needs spaces and programs.

The district desires to have21st century-style, flexible spacesfor the development of critical thinking, creative problem solving, independent learning, and student and teacher collaboration at each school. This facility is obsolete and not conducive to 21st century teaching and learning methodologies. These standards in school design include:

- Flexible spaces for student collaboration, interaction and creative thinking, such as small seminar, large group and breakout spaces
- Adaptable and varied spaces that allow for personalization, differentiated instruction and student choice
- Distributed spaces adjacent to classrooms to build student - teacher and teacher - teacher connections, such as teacher planning spaces
- Spaces for visibility to experiential and hands on activities or project-based learning, which include places to work and display, such as Fabrication Labs and non-passive learning environments.
- The evolution of the Library toMediaCenterto Information Commons to today's series of spaces that form the Learning Commons
- Right sized spaces that allow for today's seamless and interactive technology, evolving tools and accessibility needs
- Efficient, interdisciplinary layouts to optimize the time and ways we educate our students
- Buildings with a sense of place, indoor / outdoor connections, natural daylight and appropriate environmental systems for sustainability and student engagement
- And the changing tools and systems required to make secure and safe buildings

The single high school in Lowell, serving grades 9-12 across a sprawling urban campus of buildings, is showing insufficient space in the areas of core academic, vocations and technology and media center, with a clear need for state-of-the-art science and fabrication labs, small and large group seminar, and group work spaces for the students. The current science labs are both under-sized and under- engineered and therefore do not meet state and local standards and codes. At the present time, the current number and configuration of science classrooms/laboratories constrain the staff from providing science programming that meets state and local requirements, including the Common Core initiative. Teacher offices are not integrated into the educational areas making it difficult for interactions between the faculty and students as well as faculty to faculty. There are also student-designated spaces which are oversized based on current MSBA guidelines, such as the physical education and auditorium/ drama spaces, but without further, in-depth, educational programming with the users, a reasonable and probable conclusion is that these spaces fill a much needed role in scheduling and usage throughout the

school day. The considerable size of the student population, a model seen in few other high schools inMassachusetts, will need further discussions with the MSBA. Bringing theFreshmanAcademyinto the folds of the main building in a wing of their own, will provide more safety and security for these students, help develop four year teacher interactions, and provide efficiency in their day to day movement through campus. This HS facility will see a need in the next decade for educating 3,900 students each year as well as provide community-integrated spaces for the City.

Priority 7

Question 2: Please describe the measures the district has taken or is planning to take in the immediate future to mitigate the problem(s) described above.

In April 2013, OMR Architects was hired to prepare a Comprehensive Facilities Assessment and Master Plan which included 29 Lowell school facilities- elementary, middle, PK-8, high, alternative, day and the adult education center. The goals of the study were: 1) Perform a Physical and Programmatic Assessment of the Lowell Public School facilities, and 2) Develop a 10 Year Master Plan for critical maintenance, renovations and additions and/or building replacements.

The facilities assessment and master plan included: reviewing the schools and their relationships within the City of Lowell and their defining neighborhoods; analyzing the existing conditions of all of the facilities (architecture, site, structure, MEP/FP) and providing baseline repair estimates; three educational visioning sessions with school and district administration and educational leaders to set the goals and values for the master plan study; analysis of NESDEC enrollment projections for ten years; educational programming space analysis comparing the existing and projected population and facilities to MSBA guidelines; understanding site availability in Lowell; developing multiple masterplan options and comparing these with cost and value; developing preferred options; and developing a 10 year capital plan for the design and construction work of this report.

The Lowell High School fits into the Masterplan as the Preferred Solution Option 1D/E with a total project cost of $245.4M, not including escalation or land acquisition. This 650,000 GSF solution requires the possession of adjacent land and includes an addition/ demolition/ renovation/ repurposing response to the existing Lowell High School facilities. The same Masterplan includes the Elementary, Middle & K-8 School Preferred Solution of Option 1H with a total project cost of $270M, not including escalation or land acquisition. This solution includes: additions and renovations to Wang, Daley and Robinson Middle Schools to make eight-strand schools serving 792 students each; an addition/ renovation/ conversion of Rogers School to be a four-strand PK-8 facility serving 960 students; a new, four-strand PK-8 facility serving 960 students; and major and minor repairs of 23 other school facilities.

As a short-term measure to reduce current class size enrollment at the elementary school grade levels, the Lowell School Committee recently voted to re-open theRogersSchoolto serve students in grades Pre-K – 2 for the upcoming 2014/15 school year. This is a short-term solution to begin to address overcrowding at the elementary school level, however when this population reaches the 5thgrade at the start of the 2016/17 school year, the current middle school configuration (number of classes) will not be able to accommodate the entering 5thgrade students.

Priority 7

Question 3: Please provide a detailed explanation of the impact of the problem described in this priority on your district's educational program. Please include specific examples of how the problem prevents the district from delivering the educational program it is required to deliver and how students and/or teachers are directly affected by the problem identified.

An example of the facility deficiency may be observed in Room 314 in the 1922BuildingofLHS, a science lab. There is a working gas with working gas lines. The total square footage of workable the lab space in this room is 480 square ft. Science labs in the 1980BuildingofLHSalso have working gas with working gas lines, however the total square footage of workable the lab space in this room is 661 square ft.

Understand that the number of occupants allowed in the laboratory must be set at a safe level based on building and fire safety codes, size and design of the laboratory teaching facility, chemical/physical/biological hazards, and students" needs (NSTA 2000; Roy 2006). Science classes should have no more than 24 students to allow for adequate supervision during science activities, even if the occupancy load limit might accommodate more (NSTA 2004). It is equally important to ensure adequate workspace for each student. NSTA recommends 60 sq. ft. for each secondary student.

Research data show that accidents rise dramatically as class enrollments exceed 24 students or when inadequate individual workspace is provided (West et al. 2005).

Recommended lab size:

60 sq. ft. x 25 students =1500 sq. ft.

Room 314 at 480 square feet of lab space falls short of NSTA recommendations by1120 sq. ft.

The labs in the 600's at 661 square feet of lab space fall short of NSTA recommendations by 839 square feet (this calculates to 26.5 square feet of workable lab space per student).

ADAcompliance is also an issue.

Another example of facility deficiency may be observed in theLibraryMediaCenter. The library has 110 seats in addition to 25 computer stations in the library and 30 computer stations in the attached computer lab. Due to area constraints only two classes can be in the library at any one time comfortably. The number of classes running each period range from 125 classes to 167.

REQUIRED FORM OF VOTE TO SUBMIT AN SOI

REQUIRED VOTES

If a City or Town, a vote in the following form is required from both the City Council/Board of Aldermen **OR** the Board of Selectmen/equivalent governing body **AND** the School Committee.

If a regional school district, a vote in the following form is required from the Regional School Committee only. FORM OF VOTE Please use the text below to prepare your City's, Town's or District's required vote(s).

FORM OF VOTE

Please use the text below to prepare your City's, Town's or District's required vote(s).

Resolved: Having convened in an open meeting on _____, prior to the closing date, the _____ *[City Council/Board of Aldermen, Board of Selectmen/Equivalent Governing Body/School Committee]* of _____*[City/Town]*, in accordance with its charter, by-laws, and ordinances, has voted to authorize the Superintendent to submit to the Massachusetts School Building Authority the Statement of Interest dated _____ for the _____*[Name of School]* located at _____*[Address]* which describes and explains the following deficiencies and the priority category(s) for which an application may be submitted to the Massachusetts School Building Authority in the future

_____

_____

_____

_____

_____

_____; *[Insert a description of the priority(s) checked off on the Statement of Interest Form and a brief description of the deficiency described therein for each priority];* and hereby further specifically acknowledges that by submitting this Statement of Interest Form, the Massachusetts School Building Authority in no way guarantees the acceptance or the approval of an application, the awarding of a grant or any other funding commitment from the Massachusetts School Building Authority, or commits the City/Town/Regional School District to filing an application for funding with the Massachusetts School Building Authority.

CERTIFICATIONS

The undersigned hereby certifies that, to the best of his/her knowledge, information and belief, the statements and information contained in this statement of Interest and attached hereto are true and accurate and that this Statement of Interest has been prepared under the direction of the district school committee and the undersigned is duly authorized to submit this Statement of Interest to the Massachusetts School Building Authority. The undersigned also hereby acknowledges and agrees to provide the Massachusetts School Building Authority, upon request by the Authority, any additional information relating to this Statement of Interest that may be required by the Authority.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Nobis Engineering, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

Search Results:

Year	Scale	Details	Source
2012	1"=500'	Flight Year: 2012	USDA/NAIP
2010	1"=500'	Flight Year: 2010	USDA/NAIP

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

Ammar M. Dieb
President

UEC:\216 332.00\Report.DOC

Enclosure

1.0 INTRODUCTION:

Universal Environmental Consultants (UEC) has been providing comprehensive asbestos services since 2001 and has completed projects throughout New England. We have completed projects for a variety of clients including commercial, industrial, municipal, and public and private schools. We maintain appropriate asbestos licenses and staff with a minimum of twenty five years of experience.

UEC was contracted by Perkins Eastman to conduct the following services at the Lowell High School, Lowell, MA:

- Asbestos Containing Materials (ACM) determination inspection and sampling;
- Polychlorinated Biphenyls (PCB's)-Electrical Equipment and Light Fixtures inspection;
- PCB's Caulking Inspection;
- Lead Based Paint (LBP) inspection;
- Mercury in Rubber Flooring inspection and sampling;
- Airborne Mold inspection and sampling;
- Radon sampling;

The high school consists of several buildings/wings as follows:

- Kouloheras/Coburn/1997 Addition;
- Lord Building /Field House;
- Freshman Academy;
- Steam Plant.

The scope of work included the inspection of accessible ACM, collection of bulk samples from materials suspected to contain asbestos, determination and quantities of types of ACM found and cost estimates for remediation. A comprehensive survey per the Environmental Protection Agency (EPA) NESHAP regulation would be required prior to any renovation or demolition activities.

Bulk samples analyses for asbestos were performed using the standard Polarized Light Microscopy (PLM) Method in accordance with EPA standard. Bulk samples were collected by a Massachusetts licensed asbestos inspector Mr. Leonard J. Busa (AI-030673) and analyzed by a Massachusetts licensed laboratory Asbestos Identification Laboratory, Woburn, MA.

Mercury in rubber flooring sample was analyzed by an EPA approved laboratory EMSL, Cinnaminson, NJ.

Airborne mold samples were analyzed by an EPA approved laboratory EMSL, Woburn, MA.

Radon samples were analyzed by an EPA licensed laboratory AccuStar, Medway, MA.

Samples results are attached.

2.0 FINDINGS:

Asbestos Containing Materials (ACM):
The regulations for asbestos inspection are based on representative sampling. It would be impractical and costly to sample all materials in all areas. Therefore, representative samples of each homogenous area were collected and analyzed or assumed.

All suspect materials were grouped into homogenous areas. By definition a homogenous area is one in which the materials are evenly mixed and similar in appearance and texture throughout. A homogeneous area shall be determined to contain asbestos based on findings that the results of at least one sample collected from that area shows that asbestos is present in an amount greater than 1 percent in accordance with EPA regulations. Per the

Department of Environmental Protection (DEP) any amount of asbestos found must be disposed as asbestos. No additional suspect and accessible ACM were found during this survey. However, hidden ACM may be found during the renovation and demolition activities.

Number of Samples Collected:

Kouloheras/Coburn/1997 Addition:

Ninety eight (98) bulk samples were collected from materials suspected of containing asbestos, including:

Type and Location of Suspect Material

1. Bedding/adhesive for ceramic floor at basement custodian room
2. Cementitious painted floor at basement main corridor
3. Lab table at classroom 314
4. Adhesive for tectum wall panel at basement heating room 23
5. Adhesive for tectum wall panel at basement heating room 23

98. Grey spot linoleum floor covering at bridge I

Sample Results:

Type and Location of Suspect Material	Sample Result
1. Bedding/adhesive for ceramic floor at basement custodian room	No Asbestos Detected
2. Cementitious painted floor at basement main corridor	No Asbestos Detected
3. Lab table at classroom 314	20% Asbestos
4. Adhesive for tectum wall panel at basement heating room 23	No Asbestos Detected
5. Adhesive for tectum wall panel at basement heating room 23	No Asbestos Detected
6. White fire block above ceiling at basement heating room 23	No Asbestos Detected
7. Grey duct sealant at teacher's center attic	No Asbestos Detected
8. Lime/grey duct sealant at attic	No Asbestos Detected
9. Insulation inside wood fire door type I at basement stairwell	No Asbestos Detected
10. Insulation inside wood fire door type II at second floor auditorium lobby	No Asbestos Detected
11. White brick mortar at teacher's center attic	No Asbestos Detected
12. Fireproofing at auditorium lobby	No Asbestos Detected
13. Fireproofing at auditorium lobby	No Asbestos Detected
14. Hard tan glazing caulking for vision lite in wood door at classroom 133	No Asbestos Detected
15. Soft black glazing caulking for borrowed lite at second floor	3% Asbestos
16. Hard grey glazing caulking for borrowed lite at second floor	2% Asbestos
17. Hard grey glazing caulking for borrowed lite at second floor	No Asbestos Detected
18. Soft black glazing caulking for borrowed lite at first floor	No Asbestos Detected
19. 2' x 2' Suspended acoustical ceiling tile at band storage room	No Asbestos Detected
20. 2' x 2' Suspended acoustical ceiling tile at auditorium lobby	No Asbestos Detected
21. 2' x 2' Suspended acoustical ceiling tile at teacher's center	No Asbestos Detected
22. Blue/dark grey spot linoleum floor covering at classroom 017	No Asbestos Detected
23. Grey spot linoleum floor covering at bridge I	No Asbestos Detected
24. Light grey spot linoleum floor covering at bridge II (new bridge)	No Asbestos Detected
25. Adhesive for grey spot linoleum floor covering at bridge I	No Asbestos Detected
26. Joint compound at classroom 12	No Asbestos Detected
27. Joint compound at heating room 23	No Asbestos Detected
28. Ceiling joint compound at basement custodian area	No Asbestos Detected
29. Joint compound at first floor by room 139	No Asbestos Detected
30. Joint compound at basement small mechanical room	No Asbestos Detected
31. Joint compound at teacher's center hall	No Asbestos Detected
32. Joint compound at hallway outside lockers by room 136	No Asbestos Detected
33. Joint compound at custodian closet by room 223	No Asbestos Detected
34. Joint compound behind ceramic wall tile at second floor elevator	No Asbestos Detected
35. Grey/brown grey/white vinyl floor tile at upper level above teacher's center	No Asbestos Detected
36. Adhesive for grey/brown grey/white vinyl floor tile at upper level above teacher's center	No Asbestos Detected
37. Grey/brown grey/white vinyl floor tile at upper level above teacher's center	No Asbestos Detected
38. Adhesive for grey/brown grey/white vinyl floor tile at upper level above teacher's center	No Asbestos Detected
39. Dark blue vinyl floor tile at classroom 105 closet	No Asbestos Detected
40. Adhesive for dark blue vinyl floor tile at classroom 105 closet	No Asbestos Detected
41. Dark blue vinyl floor tile at teacher's center kitchen	No Asbestos Detected
42. Adhesive for dark blue vinyl floor tile at teacher's center kitchen	No Asbestos Detected
43. Dark blue vinyl floor tile at classroom 28	No Asbestos Detected
44. Light blue vinyl floor tile at ROTC storage room	No Asbestos Detected
45. Caramel vinyl floor tile at third floor plant room top of stairwell I	No Asbestos Detected
46. Adhesive for caramel vinyl floor tile at third floor plant room top of stairwell I	No Asbestos Detected
47. White/black grey vinyl floor tile at end of bridge	No Asbestos Detected
48. White/blue spots vinyl floor tile at hallway outside teacher's center	No Asbestos Detected
49. Mastic for white/blue spots vinyl floor tile at hallway outside teacher's center	No Asbestos Detected
50. Sea green vinyl floor tile at hallway outside teacher's center	No Asbestos Detected
51. Mastic for sea green vinyl floor tile at hallway outside teacher's center	No Asbestos Detected

52.	White/blue spots vinyl floor tile at classroom 314	No Asbestos Detected
53.	White/blue spots vinyl floor tile at basement ROTC hall	No Asbestos Detected
54.	Mastic for white/blue spots vinyl floor tile at basement ROTC hall	No Asbestos Detected
55.	Mastic for white/blue spots vinyl floor tile at basement ROTC hall	No Asbestos Detected
56.	Light grey/white vinyl floor tile at basement stairwell	2% Asbestos
57.	Mastic for light grey/white vinyl floor tile at basement stairwell	No Asbestos Detected
58.	Vinyl floor tile under plywood/carpet at classroom 117	No Asbestos Detected
59.	Mastic for vinyl floor tile under plywood/carpet at classroom 117	5% Asbestos
60.	Vinyl floor tile under plywood/carpet at storage room 126-A	No Asbestos Detected
61.	Mastic for vinyl floor tile under plywood/carpet at storage room 126-A	3% Asbestos
62.	Ceiling plaster at third floor custodian closet	No Asbestos Detected
63.	Ceiling plaster at basement band room	No Asbestos Detected
64.	Glue daub for ceiling plaster at basement band room	3% Asbestos
65.	Wall plaster at teacher's center	No Asbestos Detected
66.	Wall plaster at auditorium	No Asbestos Detected
67.	Wall plaster at third floor stairwell	No Asbestos Detected
68.	Wall plaster at classroom 105	No Asbestos Detected
69.	Wall plaster at classroom 110	No Asbestos Detected
70.	Wall plaster at classroom 223	No Asbestos Detected
71.	Wall plaster at main corridor by classroom 220	No Asbestos Detected
72.	Wall plaster at main corridor by classroom 321	No Asbestos Detected
73.	Fireproofing at hallway by classroom 352	No Asbestos Detected
74.	Hard tan glazing caulking for vision lite in wood door at classroom 323	No Asbestos Detected
75.	Joint compound behind ceramic wall tile at boy's room by room 203	No Asbestos Detected
76.	Hard black lab table at classroom 304	No Asbestos Detected
77.	Slate chalkboard at classroom 329	No Asbestos Detected
78.	White residue on slate chalkboard at classroom 329	No Asbestos Detected
79.	Wall plaster at classroom 304	No Asbestos Detected
80.	Concrete slab under hardwood floor at rear hallway of room 220-C	No Asbestos Detected
81.	Hard tan glazing caulking for vision lite in wood door at classroom 131	No Asbestos Detected
82.	Hard grey glazing caulking for vision lite in metal door at first floor stairwell	2% Asbestos
83.	Hard grey glazing caulking for vision lite in metal door at second floor stairwell	No Asbestos Detected
84.	Hard grey glazing caulking for vision lite in metal door at rear hallway	2% Asbestos
85.	Exterior window framing caulking	No Asbestos Detected
86.	Exterior window framing caulking	No Asbestos Detected
87.	Exterior window framing caulking	No Asbestos Detected
88.	Exterior window framing caulking	No Asbestos Detected
89.	Exterior window framing caulking	No Asbestos Detected
90.	Exterior window framing caulking	No Asbestos Detected
91.	Exterior door framing caulking	2% Asbestos
92.	Exterior residue door framing caulking on brick	2% Asbestos
93.	Exterior door framing caulking	2% Asbestos
94.	Exterior horizontal white caulking in sill	No Asbestos Detected
95.	Exterior horizontal white caulking in sill	No Asbestos Detected
96.	Blue/dark grey spot linoleum floor covering at Coburn basement stairwell	No Asbestos Detected
97.	Adhesive for blue/dark grey spot linoleum floor covering at Coburn basement stairwell	No Asbestos Detected
98.	Grey spot linoleum floor covering at bridge I	No Asbestos Detected

Observations and Conclusions:

The condition of ACM is very important. ACM in good condition does not present a health issue unless it is disturbed. Therefore, it is not necessary to remediate ACM in good condition unless it will be disturbed through renovation, demolition or other activity.

Refer to the AHERA Management Plan for condition of ACM.

1. Lab table was found to contain asbestos.
2. Soft black glazing caulking for borrowed lite was found to contain asbestos.
3. Hard grey glazing caulking for borrowed lite was found to contain asbestos.
4. Light grey/white vinyl floor tile was found to contain asbestos.
5. Mastic for vinyl floor tile under plywood/carpet was found to contain asbestos.
6. Glue daub for ceiling plaster was found to contain asbestos.
7. Hard grey glazing caulking for vision lite in metal door was found to contain asbestos.
8. Exterior door framing caulking was found to contain asbestos.
9. Exterior residue door framing caulking on brick was found to contain asbestos.
10. Glue holding blackboard was assumed to contain asbestos.
11. Pipe insulation was assumed to contain asbestos.
12. Stage fire curtain was assumed to contain asbestos.
13. Transite panels were assumed to contain asbestos and assumed to exist under windows on both bridges.
14. Underground sewer pipes were assumed to contain asbestos.
15. Damproofing on exterior and foundation walls was assumed to contain asbestos. The demolition contractor will have to segregate the ACM from non-ACM building surfaces for proper disposal in an EPA approved landfill that does not recycle. A non-traditional abatement plan would have to be prepared and submitted to the DEP for approval.
16. Testing was not performed of the roof to avoid damage. Therefore, roofing was assumed to contain asbestos. However, roofing does not have to be removed by a licensed asbestos abatement contractor. Roofing material does not have to be removed by a licensed asbestos contractor. However, the General Contractor must comply with OSHA regulation during demolition and with state regulations for proper disposal. A non-traditional abatement plan would have to be prepared and submitted to the DEP for approval.
17. All other suspect materials were found not to contain asbestos. Hidden ACM may be found during renovation and demolition activities.

Lord Building/Field House:

Sixty (60) bulk samples were collected from materials suspected of containing asbestos, including:

Type and Location of Suspect Material

1. Grey sink damproofing at teacher's room
2. Soft black glazing caulking for borrowed lite at main lobby
3. Vertical white caulking in CMU wall at administrative conference room
4. Dark blue vinyl floor tile at cafeteria
5. Mastic for dark blue vinyl floor tile at cafeteria
6. White with light blue vinyl floor tile at cafeteria
7. Mastic for white with light blue vinyl floor tile at cafeteria
8. White with black/grey vinyl floor tile at exit hall by administrative conference room
9. Mastic for white with black/grey vinyl floor tile at exit hall by administrative conference room
10. White with black/grey vinyl floor tile at exit hall by kitchen
11. Mastic for white with black/grey vinyl floor tile at exit hall by kitchen
12. Exterior window framing caulking at receiving
13. Exterior window soft brown glazing caulking at receiving
14. Exterior window framing caulking at kitchen
15. Exterior window soft brown glazing caulking at kitchen
16. Exterior window framing caulking for transite panel by main entrance II
17. Exterior transite panel by main entrance II
18. Exterior transite panel covering vertical steel column
19. Exterior transite panel covering vertical steel column
20. Exterior transite panel covering vertical steel column
21. Exterior window glazing caulking for transite panel by main entrance II
22. Exterior black damproofing behind brick at foundation by kitchen
23. Exterior black damproofing behind brick at foundation by kitchen

24. Joint compound at column hall by room 620
25. Joint compound at hall outside library
26. Joint compound at column by gymnasium
27. 2’ x 2’ Suspended acoustical ceiling tile at library computer lab
28. 2’ x 2’ Suspended acoustical ceiling tile at third floor copy room
29. 2’ x 2’ Suspended acoustical ceiling tile at library conference room
30. Fireproofing at library
31. Fireproofing at library
32. Fireproofing at library
33. Blown-in insulation in CMU wall at gymnasium
34. Older caramel vinyl floor tile at little theater storage room
35. Mastic for older caramel vinyl floor tile at little theater storage room
36. Older caramel vinyl floor tile at kitchen storage room
37. Mastic for older caramel vinyl floor tile at kitchen storage room
38. Soft black glazing caulking for vision lite in metal door at room 610
39. White with black/grey vinyl floor tile at hall outside room 610-B
40. Mastic for white with black/grey vinyl floor tile at hall outside room 610-B
41. White with black/grey vinyl floor tile at second floor hall by stairwell 6
42. Mastic for white with black/grey vinyl floor tile at second floor hall by stairwell 6
43. Adhesive for white with black/grey vinyl floor tile at hall outside library
44. Black sink damproofing at nurse
45. Exterior damproofing under brick on foundation at pool building
46. Exterior flashing protruding from brick at pool building
47. Exterior unit vent grille caulking at pool building
48. Exterior hidden caulking for transite panel encasing vertical steel column
49. Exterior hidden caulking for transite panel encasing vertical steel column
50. Transite panel encasing vertical steel column at pool building
51. Damproofing on CMU at flower bed at Trolley side
52. Exterior window framing caulking at Trolley side
53. Soft black glazing caulking for vision lite in metal door at first floor stairwell door
54. Joint compound on ceiling soffit at second floor gymnasium lobby
55. Finish on CMU wall at pool
56. Adhesive for ceramic baseboard at boy’s locker room
57. Adhesive for ceramic baseboard at pool
58. Glue tab for fiberglass insulated duct at sub-basement of pool
59. Glue tab for fiberglass insulated duct at sub-basement of pool
60. Grey sealant on metal duct at sub-basement of pool

Sample Results:

Type and Location of Suspect Material	Sample Result
1. Grey sink damproofing at teacher’s room	No Asbestos Detected
2. Soft black glazing caulking for borrowed lite at main lobby	3% Asbestos
3. Vertical white caulking in CMU wall at administrative conference room	2% Asbestos
4. Dark blue vinyl floor tile at cafeteria	No Asbestos Detected
5. Mastic for dark blue vinyl floor tile at cafeteria	No Asbestos Detected
6. White with light blue vinyl floor tile at cafeteria	No Asbestos Detected
7. Mastic for white with light blue vinyl floor tile at cafeteria	No Asbestos Detected
8. White with black/grey vinyl floor tile at exit hall by administrative conference room	No Asbestos Detected
9. Mastic for white/black/grey vinyl floor tile at exit hall by administrative conference room	5% Asbestos
10. White with black/grey vinyl floor tile at exit hall by kitchen	No Asbestos Detected
11. Mastic for white/black/grey vinyl floor tile at exit hall by kitchen	5% Asbestos
12. Exterior window framing caulking at receiving	No Asbestos Detected
13. Exterior window soft brown glazing caulking at receiving	5% Asbestos

14. Exterior window framing caulking at kitchen	No Asbestos Detected
15. Exterior window soft brown glazing caulking at kitchen	2% Asbestos
16. Exterior window framing caulking for transite panel by main entrance II	No Asbestos Detected
17. Exterior transite panel by main entrance II	20% Asbestos
18. Exterior transite panel covering vertical steel column	20% Asbestos
19. Exterior transite panel covering vertical steel column	20% Asbestos
20. Exterior transite panel covering vertical steel column	20% Asbestos
21. Exterior window glazing caulking for transite panel by main entrance II	2% Asbestos
22. Exterior black damproofing behind brick at foundation by kitchen	10% Asbestos
23. Exterior black damproofing behind brick at foundation by kitchen	10% Asbestos
24. Joint compound at column hall by room 620	No Asbestos Detected
25. Joint compound at hall outside library	No Asbestos Detected
26. Joint compound at column by gymnasium	No Asbestos Detected
27. 2' x 2' Suspended acoustical ceiling tile at library computer lab	No Asbestos Detected
28. 2' x 2' Suspended acoustical ceiling tile at third floor copy room	No Asbestos Detected
29. 2' x 2' Suspended acoustical ceiling tile at library conference room	No Asbestos Detected
30. Fireproofing at library	No Asbestos Detected
31. Fireproofing at library	No Asbestos Detected
32. Fireproofing at library	No Asbestos Detected
33. Blown-in insulation in CMU wall at gymnasium	No Asbestos Detected
34. Older caramel vinyl floor tile at little theater storage room	No Asbestos Detected
35. Mastic for older caramel vinyl floor tile at little theater storage room	10% Asbestos
36. Older caramel vinyl floor tile at kitchen storage room	No Asbestos Detected
37. Mastic for older caramel vinyl floor tile at kitchen storage room	10% Asbestos
38. Soft black glazing caulking for vision lite in metal door at room 610	No Asbestos Detected
39. White with black/grey vinyl floor tile at hall outside room 610-B	No Asbestos Detected
40. Mastic for white with black/grey vinyl floor tile at hall outside room 610-B	5% Asbestos
41. White with black/grey vinyl floor tile at second floor hall by stairwell 6	No Asbestos Detected
42. Mastic for white with black/grey vinyl floor tile at second floor hall by stairwell 6	No Asbestos Detected
43. Adhesive for white with black/grey vinyl floor tile at hall outside library	5% Asbestos
44. Black sink damproofing at nurse	No Asbestos Detected
45. Exterior damproofing under brick on foundation at pool building	10% Asbestos
46. Exterior flashing protruding from brick at pool building	10% Asbestos
47. Exterior unit vent grille caulking at pool building	No Asbestos Detected
48. Exterior hidden caulking for transite panel encasing vertical steel column	2% Asbestos
49. Exterior hidden caulking for transite panel encasing vertical steel column	2% Asbestos
50. Transite panel encasing vertical steel column at pool building	20% Asbestos
51. Damproofing on CMU at flower bed at Trolley side	No Asbestos Detected
52. Exterior window framing caulking at Trolley side	No Asbestos Detected
53. Soft black glazing caulking for vision lite in metal door at first floor stairwell door	No Asbestos Detected
54. Joint compound on ceiling soffit at second floor gymnasium lobby	No Asbestos Detected
55. Finish on CMU wall at pool	No Asbestos Detected
56. Adhesive for ceramic baseboard at boy's locker room	No Asbestos Detected
57. Adhesive for ceramic baseboard at pool	No Asbestos Detected
58. Glue tab for fiberglass insulated duct at sub-basement of pool	No Asbestos Detected
59. Glue tab for fiberglass insulated duct at sub-basement of pool	No Asbestos Detected
60. Grey sealant on metal duct at sub-basement of pool	No Asbestos Detected

Observations and Conclusions:

The condition of ACM is very important. ACM in good condition does not present a health issue unless it is disturbed. Therefore, it is not necessary to remediate ACM in good condition unless it will be disturbed through renovation, demolition or other activity.

Refer to the AHERA Management Plan for condition of ACM.

1. Soft black glazing caulking for borrowed lite was found to contain asbestos.
2. Vertical white caulking in CMU wall was found to contain asbestos.
3. Mastic for white with black/grey vinyl floor tile was found to contain asbestos.
4. Mastic for older caramel vinyl floor tile was found to contain asbestos.
5. Exterior window soft brown glazing caulking was found to contain asbestos.
6. Exterior transite panel was found to contain asbestos.
7. Exterior transite panel covering vertical steel column was found to contain asbestos.
8. Exterior window glazing caulking for transite panel was found to contain asbestos.
9. Glue holding tectum deck at the pool building was assumed to contain asbestos.
10. Exterior black damproofing behind brick at foundation was found to contain asbestos. The demolition contractor will have to segregate the ACM from non-ACM building surfaces for proper disposal in an EPA approved landfill that does not recycle. A non-traditional abatement plan would have to be prepared and submitted to the DEP for approval.
11. Exterior flashing protruding from brick was found to contain asbestos. The demolition contractor will have to segregate the ACM from non-ACM building surfaces for proper disposal in an EPA approved landfill that does not recycle. A non-traditional abatement plan would have to be prepared and submitted to the DEP for approval.
12. Exterior hidden caulking for transite panel encasing vertical steel column was found to contain asbestos.
13. Glue holding blackboard was assumed to contain asbestos.
14. Underground sewer pipes were assumed to contain asbestos.
15. Testing was not performed of the roof to avoid damage/warranty. Therefore, roofing was assumed to contain asbestos. Roofing material does not have to be removed by a licensed asbestos abatement contractor. However, the Contractor must comply with OSHA regulation during demolition and with state regulations for proper disposal. A non-traditional abatement plan would have to be prepared and submitted to the DEP for approval.
16. All other suspect materials were found not to contain asbestos. Hidden ACM may be found during renovation and demolition activities.

Freshmen Academy:

Sixty six (66) bulk samples were collected from materials suspected of containing asbestos, including:

Type and Location of Suspect Material

1. Joint compound at loft above stage
2. Joint compound at hallway by room 712
3. Joint compound at stairwell by room 701
4. Joint compound at classroom 902
5. Joint compound at hallway by room 851
6. Joint compound at classroom 851
7. Swirl joint compound at custodian room by room 703
8. Swirl joint compound at fire panel room
9. 1 ‘ x 1’ Acoustical ceiling tile at basement main corridor
10. 1 ‘ x 1’ Acoustical ceiling tile at basement main corridor
11. 2 ‘ x 2’ Suspended acoustical ceiling tile at hallway by room 851
12. Soft black glazing caulking for vision lite in metal door at rear exit door
13. Soft black glazing caulking for vision lite in metal door at stairwell by elevator
14. Soft black glazing caulking for borrowed lite at classroom 854
15. Soft black glazing caulking for borrowed lite at classroom 704
16. Soft black glazing caulking for vision lite in metal door at stairwell by room 701
17. Wood fire door insulation at hallway storage room
18. Wood fire door insulation at loft above stage
19. Purple sink damproofing at classroom 700
20. Grey sink damproofing at main office kitchen
21. Grey sink damproofing at classroom 720
22. Joint compound at classroom 902

23. Adhesive for rubber flooring at stairwell
24. Adhesive for rubber flooring at stairs up to security
25. Tan duct sealant at third floor HVAC room
26. Tan duct sealant at third floor HVAC room
27. Grey duct sealant at loft above stage
28. Tan sealant around sink drain at classroom 851
29. Black mastic in speaker box at loft above stage
30. Ceiling plaster at custodian room by room 703
31. Ceiling plaster at classroom 851
32. Grey sink damproofing at classroom 851
33. Adhesive on gypsum for green glazed wall tile at basement hallway
34. Light brown vinyl floor tile at kitchen storage room
35. Black mastic for light brown vinyl floor tile at kitchen storage room
36. Light grey/blue vinyl floor tile at stairwell by room 810
37. Light grey/blue vinyl floor tile at classroom 816
38. Light grey vinyl floor tile at hallway by room 810
39. Black mastic for light grey vinyl floor tile at hallway by room 810
40. Light grey vinyl floor tile at classroom 859
41. Black mastic for light grey vinyl floor tile at classroom 859
42. Light grey vinyl floor tile at main corridor by room 813
43. Black mastic for light grey vinyl floor tile at main corridor by room 813
44. Golden brown vinyl floor tile intermixed with light grey tile at classroom 901
45. Black mastic for golden brown vinyl floor tile intermixed with light grey tile at classroom 901
46. Red vinyl floor tile at classroom 856
47. Old tan vinyl floor tile at storage in room 852
48. Black mastic for old tan vinyl floor tile at storage in room 852
49. Leveler for old tan vinyl floor tile at storage in room 852
50. New white/green/red vinyl floor tile at room 717
51. Mastic for new white/green/red vinyl floor tile at room 717
52. Leveler for new white/green/red vinyl floor tile at room 717
53. New white/green/red vinyl floor tile at room 700
54. Mastic for new white/green/red vinyl floor tile at room 700
55. Leveler for new white/green/red vinyl floor tile at room 700
56. Exterior window framing caulking
57. Exterior window framing caulking
58. Exterior window framing caulking
59. Exterior residue door framing caulking
60. Exterior window framing caulking
61. Hard wall plaster at room 717
62. Ceiling plaster at room 717
63. Ceiling plaster at stairwell by room 701
64. Paint on stone foundation under stairs by room 701
65. 2’ x 4’ Suspended acoustical ceiling tile at main corridor by lounge
66. Exposed adhesive on wall for white board at nurse

Sample Results:

Type and Location of Suspect Material	Sample Result
1. Joint compound at loft above stage	No Asbestos Detected
2. Joint compound at hallway by room 712	No Asbestos Detected
3. Joint compound at stairwell by room 701	No Asbestos Detected
4. Joint compound at classroom 902	No Asbestos Detected
5. Joint compound at hallway by room 851	No Asbestos Detected
6. Joint compound at classroom 851	No Asbestos Detected

7. Swirl joint compound at custodian room by room 703	No Asbestos Detected
8. Swirl joint compound at fire panel room	No Asbestos Detected
9. 1 ‘ x 1’ Acoustical ceiling tile at basement main corridor	No Asbestos Detected
10. 1 ‘ x 1’ Acoustical ceiling tile at basement main corridor	No Asbestos Detected
11. 2 ‘ x 2’ Suspended acoustical ceiling tile at hallway by room 851	No Asbestos Detected
12. Soft black glazing caulking for vision lite in metal door at rear exit door	5% Asbestos
13. Soft black glazing caulking for vision lite in metal door at stairwell by elevator	5% Asbestos
14. Soft black glazing caulking for borrowed lite at classroom 854	5% Asbestos
15. Soft black glazing caulking for borrowed lite at classroom 704	5% Asbestos
16. Soft black glazing caulking for vision lite in metal door at stairwell by room 701	5% Asbestos
17. Wood fire door insulation at hallway storage room	No Asbestos Detected
18. Wood fire door insulation at loft above stage	No Asbestos Detected
19. Purple sink damproofing at classroom 700	10% Asbestos
20. Grey sink damproofing at main office kitchen	No Asbestos Detected
21. Grey sink damproofing at classroom 720	No Asbestos Detected
22. Joint compound at classroom 902	No Asbestos Detected
23. Adhesive for rubber flooring at stairwell	No Asbestos Detected
24. Adhesive for rubber flooring at stairs up to security	No Asbestos Detected
25. Tan duct sealant at third floor HVAC room	No Asbestos Detected
26. Tan duct sealant at third floor HVAC room	No Asbestos Detected
27. Grey duct sealant at loft above stage	No Asbestos Detected
28. Tan sealant around sink drain at classroom 851	2% Asbestos
29. Black mastic in speaker box at loft above stage	10% Asbestos
30. Ceiling plaster at custodian room by room 703	No Asbestos Detected
31. Ceiling plaster at classroom 851	No Asbestos Detected
32. Grey sink damproofing at classroom 851	No Asbestos Detected
33. Adhesive on gypsum for green glazed wall tile at basement hallway	No Asbestos Detected
34. Light brown vinyl floor tile at kitchen storage room	No Asbestos Detected
35. Black mastic for light brown vinyl floor tile at kitchen storage room	No Asbestos Detected
36. Light grey/blue vinyl floor tile at stairwell by room 810	No Asbestos Detected
37. Light grey/blue vinyl floor tile at classroom 816	No Asbestos Detected
38. Light grey vinyl floor tile at hallway by room 810	No Asbestos Detected
39. Black mastic for light grey vinyl floor tile at hallway by room 810	No Asbestos Detected
40. Light grey vinyl floor tile at classroom 859	No Asbestos Detected
41. Black mastic for light grey vinyl floor tile at classroom 859	No Asbestos Detected
42. Light grey vinyl floor tile at main corridor by room 813	No Asbestos Detected
43. Black mastic for light grey vinyl floor tile at main corridor by room 813	No Asbestos Detected
44. Golden brown vinyl floor tile intermixed with light grey tile at classroom 901	No Asbestos Detected
45. Mastic for golden brown vinyl floor tile intermixed with light grey tile at classroom 901	No Asbestos Detected
46. Red vinyl floor tile at classroom 856	No Asbestos Detected
47. Old tan vinyl floor tile at storage in room 852	No Asbestos Detected
48. Black mastic for old tan vinyl floor tile at storage in room 852	No Asbestos Detected
49. Leveler for old tan vinyl floor tile at storage in room 852	No Asbestos Detected
50. New white/green/red vinyl floor tile at room 717	No Asbestos Detected
51. Mastic for new white/green/red vinyl floor tile at room 717	No Asbestos Detected
52. Leveler for new white/green/red vinyl floor tile at room 717	No Asbestos Detected
53. New white/green/red vinyl floor tile at room 700	No Asbestos Detected
54. Mastic for new white/green/red vinyl floor tile at room 700	No Asbestos Detected
55. Leveler for new white/green/red vinyl floor tile at room 700	No Asbestos Detected
56. Exterior window framing caulking	No Asbestos Detected
57. Exterior window framing caulking	No Asbestos Detected
58. Exterior window framing caulking	No Asbestos Detected
59. Exterior residue door framing caulking	No Asbestos Detected
60. Exterior window framing caulking	No Asbestos Detected
61. Hard wall plaster at room 717	No Asbestos Detected

62. Ceiling plaster at room 717 — No Asbestos Detected
63. Ceiling plaster at stairwell by room 701 — No Asbestos Detected
64. Paint on stone foundation under stairs by room 701 — No Asbestos Detected
65. 2' x 4' Suspended acoustical ceiling tile at main corridor by lounge — No Asbestos Detected
66. Exposed adhesive on wall for white board at nurse — No Asbestos Detected

Observations and Conclusions:
The condition of ACM is very important. ACM in good condition does not present a health issue unless it is disturbed. Therefore, it is not necessary to remediate ACM in good condition unless it will be disturbed through renovation, demolition or other activity.

Refer to the AHERA Management Plan for condition of ACM.

1. Soft black glazing caulking for vision lite in metal door was found to contain asbestos.
2. Soft black glazing caulking for borrowed lite was found to contain asbestos.
3. Purple sink damproofing was found to contain asbestos.
4. Tan sealant around sink drain was found to contain asbestos.
5. Black mastic in speaker box was found to contain asbestos.
6. Underground sewer pipes were assumed to contain asbestos.
7. Damproofing on exterior and foundation walls was assumed to contain asbestos. The demolition contractor will have to segregate the ACM from non-ACM building surfaces for proper disposal in an EPA approved landfill that does not recycle. A non-traditional abatement plan would have to be prepared and submitted to the DEP for approval.
8. Testing was not performed of the roof to avoid damage. Therefore, roofing was assumed to contain asbestos. However, roofing does not have to be removed by a licensed asbestos abatement contractor. Roofing material does not have to be removed by a licensed asbestos contractor. However, the General Contractor must comply with OSHA regulation during demolition and with state regulations for proper disposal. A non-traditional abatement plan would have to be prepared and submitted to the DEP for approval.
9. All other suspect materials were found not to contain asbestos. Hidden ACM may be found during renovation and demolition activities.

Steam Plant:

Sixteen (16) bulk samples were collected from materials suspected of containing asbestos, including:

Type and Location of Suspect Material

1. Interior door framing caulking at entrance to generator room
2. Interior door framing caulking at entrance to generator room
3. Generator exhaust insulation
4. Generator exhaust insulation
5. Generator exhaust insulation
6. Tan cement in boiler end section
7. Tan cement in boiler end section
8. Paint on brick wall
9. Paint on brick wall
10. Paint on concrete floor
11. Exterior window framing caulking
12. Exterior window framing caulking
13. Exterior unit vent grille caulking
14. Glazing caulking for small window in old wood door
15. Glazing caulking for small window in old wood door
16. Old brick floor in front on boilers

Sample Results:

Type and Location of Suspect Material	Sample Result
1. Interior door framing caulking at entrance to generator room	No Asbestos Detected
2. Interior door framing caulking at entrance to generator room	No Asbestos Detected
3. Generator exhaust insulation	No Asbestos Detected
4. Generator exhaust insulation	No Asbestos Detected
5. Generator exhaust insulation	No Asbestos Detected
6. Tan cement in boiler end section	No Asbestos Detected
7. Tan cement in boiler end section	No Asbestos Detected
8. Paint on brick wall	No Asbestos Detected
9. Paint on brick wall	No Asbestos Detected
10. Paint on concrete floor	No Asbestos Detected
11. Exterior window framing caulking	No Asbestos Detected
12. Exterior window framing caulking	No Asbestos Detected
13. Exterior unit vent grille caulking	No Asbestos Detected
14. Glazing caulking for small window in old wood door	No Asbestos Detected
15. Glazing caulking for small window in old wood door	No Asbestos Detected
16. Old brick floor in front on boilers	No Asbestos Detected

1. Pipe insulation was assumed to contain asbestos. The insulation was found in metal elevated enclosure leaving the plant to Freshmen Academy.
2. Exterior flashing protruding from foundation was found to contain asbestos. The demolition contractor will have to segregate the ACM from non-ACM building surfaces for proper disposal in an EPA approved landfill that does not recycle. A non-traditional abatement plan would have to be prepared and submitted to the DEP for approval.
3. Underground sewer pipes were assumed to contain asbestos.
4. Damproofing on exterior and foundation walls was assumed to contain asbestos. The demolition contractor will have to segregate the ACM from non-ACM building surfaces for proper disposal in an EPA approved landfill that does not recycle. A non-traditional abatement plan would have to be prepared and submitted to the DEP for approval.
5. All other suspect materials were found not to contain asbestos. Hidden ACM may be found during renovation and demolition activities.

Polychlorinated Biphenyls (PCB's)-Electrical Equipment and Light Fixtures:

Observations and Conclusions:

Visual inspection of various equipments such as light fixtures, thermostats, exit signs and switches was performed for the presence of PCB's and mercury. Ballasts in light fixtures were assumed not to contain PCB's since there were labels indicating that "No PCB's" was found. Tubes in light fixtures, thermostats, signs and switches were assumed to contain mercury. It would be very costly to test those equipments and dismantling would be required to access. Therefore, the above mentioned equipments should be considered to contain PCB's and mercury and disposed in an EPA approved landfill as part of the demolition project.

PCB's in Caulking:

PCB's are manmade chemicals that were widely produced and distributed across the country from the 1950s to 1977 until the production of PCB's was banned by the US Environmental Protection Agency (EPA) law which became effective in 1978. PCB's are a class of chemicals made up of more than 200 different compounds. PCB's are non-flammable, stable, and good insulators so they were widely used in a variety of products including: electrical transformers and capacitors, cable and wire coverings, sealants and caulking, and household products such as television sets and fluorescent light fixtures. Because of their chemical properties, PCB's are not very soluble in water and they do not break down easily in the environment. PCB's also do not readily evaporate into air but tend to remain as solids or thick liquids. Even though PCB's have not been produced or used in the country for more than

30 years, they are still present in the environment in the air, soil, and water and in our food. EPA requires that all construction waste including caulking be disposed as PCB's if PCB's level exceed 50 mg/kg (ppm). An abatement plan might also be required.

Observations and Conclusions:
Building materials and caulking were assumed to contain PCB's.

Lead Based Paint (LBP):
Observations and Conclusions:
LBP was assumed to exist on painted surfaces in all areas constructed prior to 1978. A school is not considered a regulated facility. All LBP activities performed, including waste disposal, should be in accordance with applicable Federal, State, or local laws, ordinances, codes or regulations governing evaluation and hazard reduction. In the event of discrepancies, the most protective requirements prevail. These requirements can be found in OSHA 29 CFR 1926-Construction Industry Standards, 29 CFR 1926.62-Construction Industry Lead Standards, 29 CFR 1910.1200-Hazards Communication, 40 CFR 261-EPA Regulations. According to OSHA, any amount of LBP triggers compliance.

Mercury in Rubber Flooring:

Lord Building/Field House:

Number of Samples Collected:

Two (2) bulk samples were collected from the rubber flooring:

Type and Location of Suspect Material

1. Rubber floor at gymnasium
2. Rubber floor at gymnasium ramp down to pool

Sample Results:

Type and Location of Suspect Material	Sample Result
1. Rubber floor at gymnasium	90 mg/kg
2. Rubber floor at gymnasium ramp down to pool	60 mg/kg

Observations and Conclusions:
Samples results of the rubber flooring indicated the presence of high level of mercury. Mercury was assumed to have leached into the concrete slab. Sampling would be required to determine extent of contamination/leaching.

Airborne Mold:
Airborne mold testing was performed utilizing Zefon International Incorporated's Air-O-Cell® sampling device following all manufacturer supplied recommended sampling procedures. Air-O-Cell® is a direct read total particulate air sampling device. It works using the inertial impaction principle similar to other spore trap devices. It is designed for the rapid collection and analysis of airborne particulate including bioaerosols. The particulate includes fibers (e.g. asbestos, fiberglass, cellulose, clothing fibers) opaque particles (e.g. fly ash, combustion particles, copy toner, oil droplets, paint), and bioaerosols (e.g. mold spores, pollen, insect parts, skin cell fragments).[1]

[1] Zefon International Inc. <www.zefon.com>

The method involves drawing a known quantity of air through a sterile sampling cassette. Subsequent to sampling, the cassette is sealed and transferred to a microbiology laboratory under chain of custody protocol for microscopic analysis. This method counts both viable and nonviable mold spores.

There are currently no guidelines or standards promulgated by a government agency or widely recognized scientific organizations for the interpretation of airborne mold spore levels. The most commonly employed tool used to assess if mold growth is occurring and there is amplification in a structure is to evaluate the indoor levels and species as well as to compare levels and species of mold outdoors to indoors. Typically, if there were more molds indoors, and/or if species were present indoors which were not present outdoors, then growth and amplification is likely occurring and further evaluation and perhaps remediation is recommended.

Kouloheras/Coburn/1997 Addition:

AIRBORNE MOLD and PARTICULATE

131600829-0007	Outside of Building	17,807	70	ND	20

AIRBORNE MOLD and PARTICULATE
(Subjective Scales)

Lab ID #	Location	Skin Fragment Density (SFD)	Fibrous Particulates (FP)	Total Background Particulate (TBP)
131604602-0001	Classroom 014	2	1	1
131604602-0002	Custodian Room by Stairwell C	2	1	3
131604602-0003	Band Storage Room	2	1	2
131604602-0004	Classroom 029	2	1	3
131604602-0005	Classroom 028	2	1	2
131604602-0006	Classroom 012	2	1	2
131604602-0007	Outside of Building	1	1	3

Observations and Conclusions:
The indoor airborne mold spore concentrations were lower than the outside sample. Based on comparisons with historical data from projects of similar type, building utilization, geographic location and season, the indoor airborne levels are considered high. Indoor mold spore counts in early fall are typically in the 4,500-6,500-spores/cubic meter range.

Breathing zone indoor samples indicated the presence of several common types of mold which are not considered to be hazardous and were also found outside. Levels inside are most likely being migrated from outside, which might indicate the higher levels of certain types of mold.

Pollen, insect fragments and Hyphal fragments were either not present or low in the samples. Hyphal fragment is a non-reproductive part of the mold.

Total background particulate on all samples was assessed as "1-3" on a scale of 1-5 where 1 is low and 5 is high. Skin fragment density on all samples was assessed as "1-2" on a scale of 1-4 where 1 is low and 4 is high. The total background levels are measured to determine airborne dust not related to airborne mold. Skin fragments are measured to determine proper housing cleaning.

Radon:

Number of Samples Collected

Kouloheras/Coburn/1997 Addition:

Number of Samples Collected

Seven (7) air samples were collected at the following locations:

Location of Material

1. Basement room 014
2. Basement custodian stairwell
3. Basement band storage room
4. Basement room 029
5. Basement room 028
6. Basement fan room
7. Basement room 012

Sample Results:

Location of Material	Sample Result
1. Basement room 014	0.7 pCi/L
2. Basement custodian stairwell	<0.4 pCi/L
3. Basement band storage room	0.5 pCi/L
4. Basement room 029	0.5 pCi/L
5. Basement room 028	0.4 pCi/L
6. Basement fan room	0.5 pCi/L
7. Basement room 012	<0.4 pCi/L

Observations and Conclusions:
The measured radon concentrations of the samples were found to be lower than the EPA guideline of 4 picoCuris of radon per liter of air (pCi/L). No further action is required.

Lord Building/Field House:

Six (6) air samples were collected at the following locations:

Location of Material

1. First floor main office

2. First floor student postings storage room
3. First floor custodial room
4. First floor administrative conference room
5. First floor athletic director office
6. First floor teacher's room

Sample Results:

Location of Material	Sample Result
1. First floor main office	<0.4 pCi/L
2. First floor student postings storage room	<0.4 pCi/L
3. First floor custodial room	<0.4 pCi/L
4. First floor administrative conference room	<0.4 pCi/L
5. First floor athletic director office	<0.4 pCi/L
6. First floor teacher's room	<0.4 pCi/L

Observations and Conclusions:
The measured radon concentrations of the samples were found to be lower than the EPA guideline of 4 picoCuris of radon per liter of air (pCi/L). No further action is required.

Freshmen Academy:

Number of Samples Collected

Seven (7) air samples were collected at the following locations:

Location of Material

1. Basement room 702
2. Basement room 703
3. Basement storage room 703/704
4. Basement storage room 701/702
5. Basement room 704
6. Basement room 705
7. Basement small hall rear of stage

Sample Results:

Location of Material	Sample Result
1. Basement room 702	1.3 pCi/L
2. Basement room 703	1.4 pCi/L
3. Basement storage room 703/704	2.2 pCi/L
4. Basement storage room 701/702	6.2 pCi/L
5. Basement room 704	0.9 pCi/L
6. Basement room 705	0.7 pCi/L
7. Basement small hall rear of stage	1.1 pCi/L

Observations and Conclusions:
The measured radon concentrations of the samples were found to be lower than the EPA guideline of 4 picoCuris of radon per liter of air (pCi/L) with the exception of one sample collected Basement storage room 701/702 (6.2 pCi/L). A mitigation system is recommended. No further action is required at other areas.

3.0 COST ESTIMATES:

The cost includes removal and disposal of all accessible ACM, other hazardous material and an allowance for removal of inaccessible or hidden ACM that may be found during renovation or demolition project. No additional suspect and accessible ACM were found during this survey. Hidden ACM may be found during renovation or demolition activities. Quantities listed below were based on actual field measurement and should be within 5% +/-.

Location	Material	Approximate Quantity	Cost Estimate ($)
Kouloheras/Coburn/1997 Addition:			
	Glue Daub on Ceiling Plaster	4,000 SF	20,000.00

4.0 DESCRIPTION OF SURVEY METHODS AND LABORATORY ANALYSES:

Asbestos:
Asbestos samples were collected using a method that prevents fiber release. Homogeneous sample areas were determined by criteria outlined in EPA document 560/5-85-030a. Bulk material samples were analyzed using PLM and dispersion staining techniques with EPA method 600/M4-82-020 by an EPA licensed laboratory Asbestos Identification Laboratory, Woburn, MA..

Mercury in Rubber Flooring:
Bulk sample was analyzed in accordance with EPA method 7471B by an EPA approved laboratory EMSL, Cinnaminson, NJ.

Airborne Mold:
The samples were analyzed by an EPA approved laboratory EMSL, Woburn, MA.

Radon:
Radon samples were analyzed by an EPA licensed laboratory AccuStar, Medway, MA.

5.0 LIMITATIONS AND CONDITIONS:

This report has been completed based on visual and physical observations made and information available at the time of the site visits, as well as an interview with the Owner's representatives. This report is intended to be used as a summary of available information on existing conditions with conclusions based on a reasonable and knowledgeable review of evidence found in accordance with normally accepted industry standards, state and federal protocols, and within the scope and budget established by the client. Any additional data obtained by further review must be reviewed by UEC and the conclusions presented herein may be modified accordingly.

This report and attachments, prepared for the exclusive use of Owner for use in an environmental evaluation of the subject site, are an integral part of the inspections and opinions should not be formulated without reading the report in its entirety. No part of this report may be altered, used, copied or relied upon without prior written permission from UEC, except that this report may be conveyed in its entirety to parties associated with Owner for this subject study.

Work Analyzed: 2016-10-06

Analysis Method: BULK PLM ANALYSIS EPA/600/R-93/116

Dear Ammar Dieb,

Asbestos Identification Laboratory has completed the analysis of the samples from your office for the above referenced project .

The information and analysis contained in this report have been generated using the EPA /600/R-93/116 Method for the Determination of Asbestos in Bulk Building Materials. Materials or products that contain more than 1% of any kind or combination of asbestos are considered an asbestos containing building material as determined by the EPA. This Polarized Light Microscope (PLM) technique may be performed either by visual estimation or point counting. Point counting provides a determination of the area percentage of asbestos in a sample. If the asbestos is estimated to be less than 10% by visual estimation of friable material, the determination may be repeated using the point counting technique. The results of the point counting supersede visual PLM results. Results in this report only relate to the items tested. This report may not be used by the customer to claim product endorsement by NVLAP or any other U.S. Government Agency.

Laboratory results represent the analysis of samples as submitted by the customer. Information regarding sample location, description, area, volume, etc., was provided by the customer. Asbestos Identification Laboratory is not responsible for sample collection activities or analytical method limitations. Unless notified in writing to return samples, Asbestos Identification Laboratory discards customer samples after 30 days. Samples containing subsamples or layers will be analyzed separately when applicable. Reports are kept at Asbestos Identification Laboratory for three years. This report shall not be reproduced, except in full, without the written consent of Asbestos Identification Laboratory.

- NVLAP Lab Code: 200919-0
- Massachusetts Certification License: AA000208
- State of Connecticut, Department of Public Health Approved Environmental Laboratory Registration Number: PH-0142
- State of Maine, Department of Environmental Protection Asbestos Analytical Laboratory License Number: LB-0078(Bulk) LA-0087(Air)
- State of Rhode Island and Providence Plantations. Department of Health Certification: AAL-121
- State of Vermont, Department of Health Environmental Health License AL934461

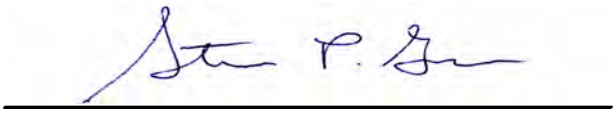
Myxomycetes++ = Myxomycetes/Periconia/Smut

No discernable field blank was submitted with this group of samples.



Steve Grise, Laboratory Manager
or other approved signatory

High levels of background particulate can obscure spores and other particulates leading to underestimation. Background levels of 5 indicate an overloading of background particulates, prohibiting accurate detection and quantification. Present = Spores detected on overloaded samples. Results are not blank corrected unless otherwise noted. The detection limit is equal to one fungal spore, structure, pollen, fiber particle or insect fragment. "*" Denotes particles found at 300X. "-" Denotes not detected. Due to method stopping rules, raw counts in excess of 100 are extrapolated based on the percentage analyzed. EMSL maintains liability limited to cost of analysis. This report relates only to the samples reported above and may not be reproduced, except in full, without written approval by EMSL. EMSL bears no responsibility for sample collection activities or analytical method limitations. Interpretation and use of test results are the responsibility of the client. Samples received in good condition unless otherwise noted.

Analysis Method: BULK PLM ANALYSIS EPA/600/R-93/116

Dear Ammar Dieb,

Asbestos Identification Laboratory has completed the analysis of the samples from your office for the above referenced project .

The information and analysis contained in this report have been generated using the EPA /600/R-93/116 Method for the Determination of Asbestos in Bulk Building Materials. Materials or products that contain more than 1% of any kind or combination of asbestos are considered an asbestos containing building material as determined by the EPA. This Polarized Light Microscope (PLM) technique may be performed either by visual estimation or point counting. Point counting provides a determination of the area percentage of asbestos in a sample. If the asbestos is estimated to be less than 10% by visual estimation of friable material, the determination may be repeated using the point counting technique. The results of the point counting supersede visual PLM results. Results in this report only relate to the items tested. This report may not be used by the customer to claim product endorsement by NVLAP or any other U.S. Government Agency.

Laboratory results represent the analysis of samples as submitted by the customer. Information regarding sample location, description, area, volume, etc., was provided by the customer. Asbestos Identification Laboratory is not responsible for sample collection activities or analytical method limitations. Unless notified in writing to return samples, Asbestos Identification Laboratory discards customer samples after 30 days. Samples containing subsamples or layers will be analyzed separately when applicable. Reports are kept at Asbestos Identification Laboratory for three years. This report shall not be reproduced, except in full, without the written consent of Asbestos Identification Laboratory.

The following analytical report covers the analysis performed on samples submitted to EMSL Analytical, Inc. on 9/23/2016. The results are tabulated on the attached data pages for the following client designated project:

Lowell High School, Lord Bldg Field House, Lowell, MA

The reference number for these samples is EMSL Order #011606205. Please use this reference when calling about these samples. If you have any questions, please do not hesitate to contact me at (856) 303-2500.

Approved By:

Phillip Worby, Chemistry Laboratory Manager

The test results contained within this report meet the requirements of NELAP and/or the specific certification program that is applicable, unless otherwise noted.
NELAP Certifications: NJ 03036, NY 10872, PA 68-00367

The samples associated with this report were received in good condition unless otherwise noted. This report relates only to those items tested as received by the laboratory. The QC data associated with the sample results meet the recovery and precision requirements established by the NELAP, unless specifically indicated. All results for soil samples are reported on a dry weight basis, unless otherwise noted. This report may not be reproduced except in full and without written approval by EMSL Analytical, Inc.

Steve Grise, Laboratory Manager
or other approved signatory

High levels of background particulate can obscure spores and other particulates leading to underestimation. Background levels of 5 indicate an overloading of background particulates, prohibiting accurate detection and quantification. Present = Spores detected on overloaded samples. Results are not blank corrected unless otherwise noted. The detection limit is equal to one fungal spore, structure, pollen, fiber particle or insect fragment. "*" Denotes particles found at 300X. "-" Denotes not detected. Due to method stopping rules, raw counts in excess of 100 are extrapolated based on the percentage analyzed. EMSL maintains liability limited to cost of analysis. This report relates only to the samples reported above and may not be reproduced, except in full, without written approval by EMSL. EMSL bears no responsibility for sample collection activities or analytical method limitations. Interpretation and use of test results are the responsibility of the client. Samples received in good condition unless otherwise noted.

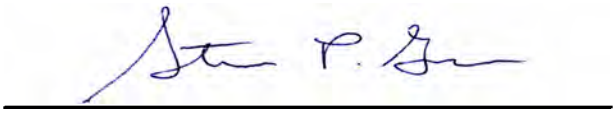
Analyt. Sensitivity 600x	-	22	-
Analyt. Sensitivity 300x	-	7*	-
Skin Fragments (1-4)	-	1	-
Fibrous Particulate (1-4)	-	1	-
Background (1-5)	-	1	-

Bipolaris++ = Bipolaris/Drechslera/Exserohilum
Myxomycetes++ = Myxomycetes/Periconia/Smut

No discernable field blank was submitted with this group of samples.



Steve Grise, Laboratory Manager
or other approved signatory

High levels of background particulate can obscure spores and other particulates leading to underestimation. Background levels of 5 indicate an overloading of background particulates, prohibiting accurate detection and quantification. Present = Spores detected on overloaded samples. Results are not blank corrected unless otherwise noted. The detection limit is equal to one fungal spore, structure, pollen, fiber particle or insect fragment. "*" Denotes particles found at 300X. "-" Denotes not detected. Due to method stopping rules, raw counts in excess of 100 are extrapolated based on the percentage analyzed. EMSL maintains liability limited to cost of analysis. This report relates only to the samples reported above and may not be reproduced, except in full, without written approval by EMSL. EMSL bears no responsibility for sample collection activities or analytical method limitations. Interpretation and use of test results are the responsibility of the client. Samples received in good condition unless otherwise noted.

Samples analyzed by EMSL Analytical, Inc. Woburn, MA AIHA-LAP, LLC --EMLAP Accredited #180179

Analysis Method: BULK PLM ANALYSIS EPA/600/R-93/116

Dear Ammar Dieb,

Asbestos Identification Laboratory has completed the analysis of the samples from your office for the above referenced project .

The information and analysis contained in this report have been generated using the EPA /600/R-93/116 Method for the Determination of Asbestos in Bulk Building Materials. Materials or products that contain more than 1% of any kind or combination of asbestos are considered an asbestos containing building material as determined by the EPA. This Polarized Light Microscope (PLM) technique may be performed either by visual estimation or point counting. Point counting provides a determination of the area percentage of asbestos in a sample. If the asbestos is estimated to be less than 10% by visual estimation of friable material, the determination may be repeated using the point counting technique. The results of the point counting supersede visual PLM results. Results in this report only relate to the items tested. This report may not be used by the customer to claim product endorsement by NVLAP or any other U.S. Government Agency.

Laboratory results represent the analysis of samples as submitted by the customer. Information regarding sample location, description, area, volume, etc., was provided by the customer. Asbestos Identification Laboratory is not responsible for sample collection activities or analytical method limitations. Unless notified in writing to return samples, Asbestos Identification Laboratory discards customer samples after 30 days. Samples containing subsamples or layers will be analyzed separately when applicable. Reports are kept at Asbestos Identification Laboratory for three years. This report shall not be reproduced, except in full, without the written consent of Asbestos Identification Laboratory.

High levels of background particulate can obscure spores and other particulates leading to underestimation. Background levels of 5 indicate an overloading of background particulates, prohibiting accurate detection and quantification. Present = Spores detected on overloaded samples. Results are not blank corrected unless otherwise noted. The detection limit is equal to one fungal spore, structure, pollen, fiber particle or insect fragment. "*" Denotes particles found at 300X. "-" Denotes not detected. Due to method stopping rules, raw counts in excess of 100 are extrapolated based on the percentage analyzed. EMSL maintains liability limited to cost of analysis. This report relates only to the samples reported above and may not be reproduced, except in full, without written approval by EMSL. EMSL bears no responsibility for sample collection activities or analytical method limitations. Interpretation and use of test results are the responsibility of the client. Samples received in good condition unless otherwise noted.

Disclaimer:

The uncertainty of this radon measurement is ~+/- 10 %. Factors contributing to uncertainty include statistical variations, daily and seasonal variations in radon concentrations, sample collection techniques and operation of the dwelling. Interference with test conditions may influence the test results.

This report may only be transferred to a third party in its entirety. Analytical results relate to the samples AS RECEIVED BY THE LABORATORY. Results shown on this report represent levels of radon gas measured between the dates shown in the room or area of the site identified above as "Property Tested". Incorrect information will affect results. The results may not be construed as either predictive or supportive of measurements conducted in any area of this structure at any other time. AccuStar Labs, its employees and agents are not responsible for the consequences of any action taken or not taken based upon the results reported or any verbal or written interpretation of the results.

Analysis Method: BULK PLM ANALYSIS EPA/600/R-93/116

Dear Ammar Dieb,

Asbestos Identification Laboratory has completed the analysis of the samples from your office for the above referenced project .

The information and analysis contained in this report have been generated using the EPA /600/R-93/116 Method for the Determination of Asbestos in Bulk Building Materials. Materials or products that contain more than 1% of any kind or combination of asbestos are considered an asbestos containing building material as determined by the EPA. This Polarized Light Microscope (PLM) technique may be performed either by visual estimation or point counting. Point counting provides a determination of the area percentage of asbestos in a sample. If the asbestos is estimated to be less than 10% by visual estimation of friable material, the determination may be repeated using the point counting technique. The results of the point counting supersede visual PLM results. Results in this report only relate to the items tested. This report may not be used by the customer to claim product endorsement by NVLAP or any other U.S. Government Agency.

Laboratory results represent the analysis of samples as submitted by the customer. Information regarding sample location, description, area, volume, etc., was provided by the customer. Asbestos Identification Laboratory is not responsible for sample collection activities or analytical method limitations. Unless notified in writing to return samples, Asbestos Identification Laboratory discards customer samples after 30 days. Samples containing subsamples or layers will be analyzed separately when applicable. Reports are kept at Asbestos Identification Laboratory for three years. This report shall not be reproduced, except in full, without the written consent of Asbestos Identification Laboratory.

UTILITY INFORMATION STATEMENT

1. THE SUB-SURFACE UTILITY INFORMATION SHOWN HEREON IS COMPILED BASED ON FIELD SURVEY INFORMATION, RECORD INFORMATION AS SUPPLIED BY THE APPROPRIATE UTILITY COMPANIES, AND PLAN INFORMATION SUPPLIED BY THE CLIENT, IF ANY; THEREFORE WE CANNOT GUARANTEE THE ACCURACY OF SAID COMPILED SUB-SURFACE INFORMATION TO ANY CERTAIN DEGREE OF STATED TOLERANCE. ONLY PHYSICALLY LOCATED SUB-SURFACE UTILITY FEATURES FALL WITHIN NORMAL STANDARD OF CARE ACCURACIES.

2. THE LOCATIONS OF UNDERGROUND PIPES, CONDUITS, AND STRUCTURES HAVE BEEN DETERMINED FROM SAID INFORMATION, AND ARE APPROXIMATE ONLY. COMPILED LOCATIONS OF ANY UNDERGROUND STRUCTURES, NOT VISIBLY OBSERVED AND LOCATED, CAN VARY FROM THEIR ACTUAL LOCATIONS.

3. ADDITIONAL BURIED UTILITIES/STRUCTURES MAY BE ENCOUNTERED.

4. THE STATUS OF UTILITIES, WHETHER ACTIVE, ABANDONED, OR REMOVED, IS AN UNKNOWN CONDITION AS FAR AS OUR COMPILATION OF THIS INFORMATION.

5. IT IS INCUMBENT UPON INDIVIDUALS USING THIS INFORMATION TO UNDERSTAND THAT COMPILING UTILITY INFORMATION IS NOT EXACT, AND IS SUBJECT TO CHANGE BASED UPON VARYING PLAN INFORMATION RECEIVED AND ACTUAL LOCATIONS.

6. THE ACCURACY OF MEASURED UTILITY INVERTS AND PIPE SIZES IS SUBJECT TO FIELD CONDITIONS, THE ABILITY TO MAKE VISUAL OBSERVATIONS, DIRECT ACCESS TO THE VARIOUS ELEMENTS AND OTHER MATTERS.

7. THE PROPER UTILITY ENGINEERING/COMPANY SHOULD BE CONSULTED AND THE ACTUAL LOCATIONS OF SUBSURFACE STRUCTURES SHOULD BE VERIFIED IN THE FIELD (V.I.F.) BEFORE PLANNING FUTURE CONNECTIONS. CONTACT THE DIG SAFE CALL CENTER AT 1-888-344-7233, SEVENTY-TWO HOURS PRIOR TO EXCAVATION, BLASTING, GRADING, AND/OR PAVING.

8. AS OF THE DATE OF THIS PLAN RECORD INFORMATION HAS NOT BEEN RECEIVED BY NITSCH ENGINEERING FOR THE FOLLOWING UTILITIES:

NOTES

1. THIS DOCUMENT IS AN INSTRUMENT OF SERVICE OF NITSCH ENGINEERING. IT IS ISSUED TO PERKINS EASTMAN, AIA FOR PURPOSES RELATED DIRECTLY AND SOLELY TO NITSCH ENGINEERING'S SCOPE OF SERVICES UNDER CONTRACT WITH PERKINS EASTMAN, AIA FOR EXISTING CONDITIONS SURVEY OF LOWELL HIGH SCHOOL CAMPUS. ANY USE OR REUSE OF THIS DOCUMENT FOR ANY REASON BY ANY PARTY FOR PURPOSES UNRELATED DIRECTLY AND SOLELY TO SAID CONTRACT AND PROJECT SHALL BE AT THE USER'S SOLE AND EXCLUSIVE RISK AND LIABILITY, INCLUDING LIABILITY FOR VIOLATION OF COPYRIGHT LAWS, UNLESS WRITTEN AUTHORIZATION IS GIVEN THEREFOR BY NITSCH ENGINEERING.

2. THE PURPOSE OF THIS PLAN IS TO SHOW EXISTING CONDITIONS SURVEY AS THE RESULT OF AN ON-THE-GROUND INSTRUMENT SURVEY WHICH OCCURRED BETWEEN AUGUST 24 AND OCTOBER 11 OF 2016.

3. HORIZONTAL COORDINATES REFER TO NAD83 BASE ON RTK GPS OBSERVATION.

4. ELEVATION REFERS TO CITY OF LOWELL VERTICAL DATUM BASED ON RTK GPS OBSERVATION AND CHECKING BENCHMARKS..

5. THE INFORMATION CONTAINED ON THE DISK OR ELECTRONIC DRAWING FILE ACCOMPANYING THIS PLAN MUST BE COMPARED TO THE SEALED AND SIGNED HARD COPY OF THE PLAN TO ENSURE THE ACCURACY OF ALL INFORMATION AND TO ENSURE NO CHANGES, ALTERATIONS, OR MODIFICATIONS HAVE BEEN MADE. RELIANCE SHALL NOT BE MADE ON A DOCUMENT TRANSMITTED BY COMPUTER OR OTHER ELECTRONIC MEANS UNLESS FIRST COMPARED TO THE ORIGINAL SEALED DOCUMENT ISSUED AT THE TIME OF THE SURVEY. DUE TO THE CRITICAL NATURE OF SURVEYING, DATA ACQUISITION, AND AUTOCAD PLAN DEVELOPMENT, IF CRITICAL DIMENSIONAL INFORMATION IS NEEDED AND IS NOT SPECIFICALLY SHOWN ON THE ELECTRONIC DRAWING FILE, PLEASE CONTACT NITSCH ENGINEERING.

UTILITY INFORMATION STATEMENT

1. THE SUB-SURFACE UTILITY INFORMATION SHOWN HEREON IS COMPILED BASED ON FIELD SURVEY INFORMATION, RECORD INFORMATION AS SUPPLIED BY THE APPROPRIATE UTILITY COMPANIES, AND PLAN INFORMATION SUPPLIED BY THE CLIENT, IF ANY; THEREFORE WE CANNOT GUARANTEE THE ACCURACY OF SAID COMPILED SUB-SURFACE INFORMATION TO ANY CERTAIN DEGREE OF STATED TOLERANCE. ONLY PHYSICALLY LOCATED SUB-SURFACE UTILITY FEATURES FALL WITHIN NORMAL STANDARD OF CARE ACCURACIES.

2. THE LOCATIONS OF UNDERGROUND PIPES, CONDUITS, AND STRUCTURES HAVE BEEN DETERMINED FROM SAID INFORMATION, AND ARE APPROXIMATE ONLY. COMPILED LOCATIONS OF ANY UNDERGROUND STRUCTURES, NOT VISIBLY OBSERVED AND LOCATED, CAN VARY FROM THEIR ACTUAL LOCATIONS.

3. ADDITIONAL BURIED UTILITIES/STRUCTURES MAY BE ENCOUNTERED.

4. THE STATUS OF UTILITIES, WHETHER ACTIVE, ABANDONED, OR REMOVED, IS AN UNKNOWN CONDITION AS FAR AS OUR COMPILATION OF THIS INFORMATION.

5. IT IS INCUMBENT UPON INDIVIDUALS USING THIS INFORMATION TO UNDERSTAND THAT COMPILING UTILITY INFORMATION IS NOT EXACT, AND IS SUBJECT TO CHANGE BASED UPON VARYING PLAN INFORMATION RECEIVED AND ACTUAL LOCATIONS.

6. THE ACCURACY OF MEASURED UTILITY INVERTS AND PIPE SIZES IS SUBJECT TO FIELD CONDITIONS, THE ABILITY TO MAKE VISUAL OBSERVATIONS, DIRECT ACCESS TO THE VARIOUS ELEMENTS AND OTHER MATTERS.

7. THE PROPER UTILITY ENGINEERING/COMPANY SHOULD BE CONSULTED AND THE ACTUAL LOCATIONS OF SUBSURFACE STRUCTURES SHOULD BE VERIFIED IN THE FIELD (V.I.F.) BEFORE PLANNING FUTURE CONNECTIONS. CONTACT THE DIG SAFE CALL CENTER AT 1-888-344-7233, SEVENTY-TWO HOURS PRIOR TO EXCAVATION, BLASTING, GRADING, AND/OR PAVING.

8. AS OF THE DATE OF THIS PLAN RECORD INFORMATION HAS NOT BEEN RECEIVED BY NITSCH ENGINEERING FOR THE FOLLOWING UTILITIES:

NOTES

1. THIS DOCUMENT IS AN INSTRUMENT OF SERVICE OF NITSCH ENGINEERING. IT IS ISSUED TO PERKINS EASTMAN, AIA FOR PURPOSES RELATED DIRECTLY AND SOLELY TO NITSCH ENGINEERING'S SCOPE OF SERVICES UNDER CONTRACT WITH PERKINS EASTMAN, AIA FOR EXISTING CONDITIONS SURVEY OF LOWELL HIGH SCHOOL CAMPUS. ANY USE OR REUSE OF THIS DOCUMENT FOR ANY REASON BY ANY PARTY FOR PURPOSES UNRELATED DIRECTLY AND SOLELY TO SAID CONTRACT AND PROJECT SHALL BE AT THE USER'S SOLE AND EXCLUSIVE RISK AND LIABILITY, INCLUDING LIABILITY FOR VIOLATION OF COPYRIGHT LAWS, UNLESS WRITTEN AUTHORIZATION IS GIVEN THEREFOR BY NITSCH ENGINEERING.

2. THE PURPOSE OF THIS PLAN IS TO SHOW EXISTING CONDITIONS SURVEY AS THE RESULT OF AN ON-THE-GROUND INSTRUMENT SURVEY WHICH OCCURRED BETWEEN AUGUST 24 AND OCTOBER 11 OF 2016.

3. HORIZONTAL COORDINATES REFER TO NAD83 BASE ON RTK GPS OBSERVATION.

4. ELEVATION REFERS TO CITY OF LOWELL VERTICAL DATUM BASED ON RTK GPS OBSERVATION AND CHECKING BENCHMARKS..

5. THE INFORMATION CONTAINED ON THE DISK OR ELECTRONIC DRAWING FILE ACCOMPANYING THIS PLAN MUST BE COMPARED TO THE SEALED AND SIGNED HARD COPY OF THE PLAN TO ENSURE THE ACCURACY OF ALL INFORMATION AND TO ENSURE NO CHANGES, ALTERATIONS, OR MODIFICATIONS HAVE BEEN MADE. RELIANCE SHALL NOT BE MADE ON A DOCUMENT TRANSMITTED BY COMPUTER OR OTHER ELECTRONIC MEANS UNLESS FIRST COMPARED TO THE ORIGINAL SEALED DOCUMENT ISSUED AT THE TIME OF THE SURVEY. DUE TO THE CRITICAL NATURE OF SURVEYING, DATA ACQUISITION, AND AUTOCAD PLAN DEVELOPMENT, IF CRITICAL DIMENSIONAL INFORMATION IS NEEDED AND IS NOT SPECIFICALLY SHOWN ON THE ELECTRONIC DRAWING FILE, PLEASE CONTACT NITSCH ENGINEERING.

PUBLIC and NONPROFIT PARCELS

CITY PROPERTIES

City of Lowell holds and extensive number of properties throughout the city used for a variety of public purposes. City properties are under the management by the following City authorities:

- Public School Department
- Parks and Recreation Department
- Fire Department
- Water Utility Department
- Public Works Department
- Wastewater Department
- Inspectional Services Department
- Cemeteries

The following table lists city owned and managed open spaces and parks. This is not a complete inventory of city owned land.

BUILDABLE ACREAGE = 6.4

BUILDING (GSF) = 641,600

RENOVATION AREA (GSF) = 623,700

ADDITION/ NEW AREA (GSF) = 17,900

EXISTING 2, 3 & 5 STORY + 2 STORY ADDTN

PARKING (GARAGE) = 1200 CAR CAPACITY

PROS/CONS

+ PROXIMITY TO TRANSPORTATION
+ PROXIMITY TO CITY/SOCIAL SERVICES
+ ADJACENT PKG GARAGE (COVERED)
+ MEETS ALL SPACE NEEDS (COUNT/SIZE)
+/- MEETS SOME EDUC. OBJECTIVES
- COMM./ACTIVITY AREAS SPREAD/SPLIT
- FRESHMAN ACADEMY IS REMOTE (INEFFICIENT SPACE USE/SAFETY ISSUE)
- SOLAR ORIENTATION IS PROBLEMATIC
- WINDOWLESS CLASSROOMS REMAIN
- LIMITED ACCESS TO GREEN SPACE
- HIGHER OPERATING COSTS (SIZE+ENV.)

CONSTRUCTION

5 YEAR PHASED PROJECT
- EXTENSIVE MODULAR CLASSROOMS
- TEMPORARY GYM FACILITIES REQUIRED

RELATIVE COSTS

TOTAL PROJECT COST = $331,360,298

ESTIMATED CITY'S SHARE = $116,472,533

Educational Visioning & Programming Summary v9

Lowell High School, Lowell Massachusetts

Overall Feasibility/Schematic Design Process

The Feasibility Study (**FS**), typically 6-8 months, is the earliest and most critical part of the design process. This phase includes information gathering, investigation/assessment of current conditions, establishment of goals/objectives, definition of program and needs, development of planning options and, ultimately selection of a preferred solution.

The MSBA defines the FS phase in two parts; the Preliminary Design Program (**PDP**) and subsequent Preferred Schematic Report (**PSR**). Upon approval, the project would move into Schematic Design (**SD**), where it is fully defined and scoped for a Project Funding Agreement (**PFA**). Each step requires MSBA approval to proceed and ultimately must be approved by the City/Town Vote to continue into full Design Development, Construction Documents, Bidding and Construction.

Feasibility Study (Two Major MSBA Submissions)		Schematic Design
Preliminary Design Program	**Preferred Schem. Report**	**Schem. Design Report**
• Existing Cond's/Site Assessments • Educational Visioning & Goals • Educational Program (by District) • Educ Specifications/Space Needs • Develop & Assess Prelim. Options • Select Preferred Site/Plan Options	• Refinement of Plan Options • Safety & Sustainability Goals • Massing/Design Studies • Final Assessment & Select (1)	• Detailed Room Layouts • Finalize Project Scope

The First Half of the Feasibility Study (the PDP)

As information gathering and assessment of existing conditions occur, our team also begins to assess the District's educational practices, its goals and objectives for the future, including curriculum, organizational models, grade structures, teaming and teaching/learning methods. This typically originates from the District's Educational Plan, if it exists, but must be refined and articulated by the District (not the architect) in the form of the MSBA's Educational Program (narrative). The MSBA considers the Ed-Program the basis for design and holds the District and Design Team accountable for its contents and the responsiveness of planning options to meet its objectives.

We facilitate a process to help the District articulate the Educational Program by assembling an educational sub-group or Educational Leadership Team (ELT) that understands current programs and initiatives, can help shape the Visioning Process to define goals, make programming decisions and participate in writing the Educational Program narrative itself. This process includes simultaneous Visioning and Programming.

New Vista Design (NVD) leads the Visioning Process that will engage a broader working group or Educational Work Group (EWG) of City, School & Community representatives in a series of workshops to explore current 21st century learning/best practices, your current practices, educational goals/objectives and how the design can best support those. Perkins Eastman/DPC (Arch) will begin the Programming Process, which includes analysis

of your programs, coordinates adjustments per your goals and projected enrollment and tabulates program requirements in the form of a Space Summary. Both NVD and PE/DPC will work with the ELT group to ensure these come together and are reflected in the District's written Educational Program. The stakeholder groups that are part of the Visioning and Programming Process include;

Educational Leadership Team (ELT) – usually 4 to 6 key staff and core decision makers for the educational program; typically individuals who provide leadership within the District/school and the individual(s) involved in the master schedule.

Educational Working Group (EWG) – typically 25 to 50 thought leaders and engaged faculty representatives that reflect the broader school and community and can help connect the vision to ideas that are appropriate for this school. Should include SBC representatives, district and school leadership, teachers, parents, interested and engaged students and community partners or leaders.

Faculty / User Groups – depending on the size of staff and depth of engagement desired, full departments or department representatives would participate in focus group meetings (by subject) during the preliminary design program phase. We often also include general updates and/or larger format presentations.

Community Stakeholders – full and diverse community representation is intended to be held within the Educational Work Group, which takes part in visioning workshops. In addition, the overall process (not just the educational programming outlined here), will engage individual and/or full community groups throughout the design.

Typical Educational Leadership Team Participants

1. Brian Martin (LHS Head of School); bmartin@lowell.k12.ma.us, 978.937.8901 (c.978.995.6925)
2. Amy McLeod (LHS Dir of Curriculum, Instruction & Assessment); amcleod@lowell.k12.ma.us, 978-446-7448
3. Roxanne Howe (LHS Discipline & Operations); rhowe@lowell.k12.ma.us, 978.275.6308
4. Jeannine Durkin (LPS Deputy Superintendent, Student Support Services); jdurkin@lowell.k12.ma.us, 978-888-1951
5. Rick Underwood (LPS Director of Operations); runderwood@lowell.k12.ma.us, 978.454.2010
6. Robert Bell (PE/DPC Educational Planner & Programmer); r.bell@perkinseastman.com, 617.712.2115 (c.781.983.2083)
7. K.C. Nelson (LPS Technology Manager); kcnelson@lowell.k12.ma.us, 978.479.7178
8. David Stephen (New Vista, Educational Visioning & Program Specialist); david@newvistadesign.net, 617.733.0847
9. Mary Ann Williams (Skanska, OPM); maryann.williams@skanska.com, 617.574.1463 (c.617.293.6869)

Copies To / Occasional Participants;

10. Kathy Provenchor (LHS Administrative Support); kprovencher@lowell.k12.ma.us,
11. Joe Drown (PE/DPC Sr. PM); j.drown@perkinseastman.com, 617.712.2107
12. Alicia Caritano (PE/DPC Asst. PM); A.Caritano@perkinseastman.com, 617.
13. Dawn Guarriello (PE/DPC Sr. PA); d.guarriello@perkinseastman.com, 617.712.2192
14. Mike McGovern (Asst. City Manager); mmcgovern@lowellma.gov, 978.674.1002

Creativity
Humanity
Purpose

Date/Time	Who	Task / Description:
Late Aug.	Arch	Information Gathering for Educational Programming
Master Schedule, Program of Studies, School Schedules, Staff/Dept List, Room Assignment Plan (incl. number/name/size if avail.) & Policies, incl. class size & teaching contract hours		
Thru September	Arch	Dev. Visioning Strategy, Program Analysis & Existing Cond's
Early-September	LPS	Assemble an ELT (Educational Leadership Team)
Sept. 14th 1pm	ELT	Kick-Off Meeting - discuss visioning/programming process
Sept. 15th 10am	MSBA	Kick-Off Meeting
Mid-September	LPS/Arch	Assemble the EWG, Start Program Analysis (step 1 of 4)
Sept. 27th 1pm	ELT	Follow-Up progress on EWG, discuss visioning workshop I
Thru October	Arch	Begin Visioning, Program Adjustments & Site Development
Oct. 6th 10am	SBC	Monthly Update
Oct. 12th 1pm	ELT	Meeting - discuss program analysis + adjustments
Oct. 14th 7:30-11:30am		EWG **Visioning Workshop I**
Oct. 17th 6:30p	Neigh.	Centralville NAG w/ Centralville CC at Dom Poloski Club
Mid-October	Arch	Start Program Adjustments (programming step 2 of 4)
Oct. 26th 1pm	ELT	Meeting – discuss user meetings/program adjustments
Thru November	Arch	Complete Visioning, Program Requirements & Space Needs
Early-November	Arch	Start Program Requirements (programming step 3 of 4)
Nov. 1st 7:30-11:30am		EWG **Visioning Workshop II**
Nov. 3rd 10am	SBC	Monthly Update
Nov. 7th 7pm	Neigh.	Pawtucketville CC w/ East Pawtucketville CG at Wang School
Nov. 9th 1pm	ELT	Meeting – program requirements, refine Educ. Program (Narr)
6:30p	Neigh.	Belvidere RC w/ Sacred Heart NIG, Riverside CC & Back Ctrl NIG at Sullivan School
Mid-November	Arch	Reconcile Space Summary (programming step 4 of 4)
Nov.14 7pm	Neigh.	Highlands C/NA w/ Low Highlands NG, Cupples Sq BRA & FOTP at Temple Emanuel
Nov.15/16 (day)	LPS	User Group Meetings (indiv. groups scheduled 7:15am-3:15pm)
Nov.17 7:30-11:30am		EWG Visioning Workshop III
Nov.18 8-12:30	ELT/SBC	**School Tours** (Essex Tech 8am, Winchester HS 10:30am)
Nov. 28 7pm	Neigh.	Lowell Down-Town NA w/ Jackson Appleton BRA, Acre Coal. at LTC STUDIOS
Nov. 30 1pm	ELT	Meeting – discuss space summary, set-up MSBA conf-call
Late-November	LPS	Update Educ. Program (Narrative) per goals/vision/needs
Thru December	All	Develop/Assess Planning Options
Dec. 1st 10am	SBC	Monthly Update
Dec. 7th 12pm	LHS	Full Faculty Meeting (overview/input on Visioning outcomes)
Dec. 8th 6:30p	Comm	**Community Meeting** at Lowell HS Auditorium
Early December	Arch.	Begin Options, Sustainability, Safety/Security & Regulatory
Mid-December	ELT	review plan options per Educ. Program (goals/vision/needs)
Late-December	Arch.	Dev. Assessment Criteria, Capital and Operating Costs

Participants	Brian Martin (Head of School), Amy McLeod (Dir. Of Curric. Instr. & Assessment), Roxane Howe (Discipline & Operations), Jeanine Durkin (Deputy Supt. SSS), Richard Underwood (Dir. Of Operations), MaryAnn Williams (Skanska), Robert Bell (PE/DPC), David Steven (NVD)	

New Business (Agenda Items)		Notes	Action by / Date Req'd
1.1	Introductions	• Additional contact information was provided re: ELT participants • The group discussed having a few other Individuals join the ELT, like the Dir. Of Technology to help inform on the vision	Brian and Amy to follow-up with individuals that will be asked to join
1.2	Overall MSBA FS/SD Process	• Bob described PDP vs PSR vs SD phases • The specific PDP Schedule was reviewed • ELT responsibilities were highlighted (primarily to direct/shape visioning, make programming decisions and develop and refine the Educational Program • ELT communication should go out to the full group, rather than a point person, but Kathy Provencher is to be copied	Kathy has been added to the distribution list and additional contact information added (see **updated attachment**)
1.3	Programming Process	• Amy suggests they will be rethinking the school's schedule (periods/cycle) to incorporate longer sessions (blocks) • Mark Lou is the actual school scheduler, future meetings to be arranged via Amy • Brian noted there has been a large increase in Life Skills. SPED space has become a significant issue	PE/DPC to include school schedule discussions in future ELT meetings The school has Special Needs projections (**school to provide**)

This Meeting Record is our understanding of the items as they were discussed. Please report any discrepancies to Perkins Eastman. If no discrepancies are reported in five working days, this Meeting Record will stand as published.

1.4	Educational Visioning Process	• Thoughts on Prior District-Wide Visioning by David (2013) were discussed, many aspects can be revisited • The starting point for visioning will be to pick-up from where the school is now in its educational plan and relate • Technology, Safety and Security are some of the key concerns and initiatives • The need for broader faculty group meetings and community engagement was discussed and noted as part of the overall process, but not specifically charted as programming/visioning. Brian noted the Auditorium and Sports Center as most viable venues for larger groups	David will assemble potential presentation slides and engagement exercises to review at the next ELT meeting The District had a safety audit done in June (**school to provide**) PE/DPC will be working with the City and SBC on a broader outreach plan for thru Oct/Nov.
1.5	Assembling the Educational Work Group (EWG)	• The purpose of forming this group was discussed along with ideal participants, including, teachers, students, parents, business/community partners, city and facilities staff and other thought leaders.	Brian and his team will begin identifying people
1.6	Reschedule Next Meeting	• Purpose; to Check-in on progress forming the EWG and plan Visioning Work Shop 1	**Rescheduled for 9/27** at 1pm Head of School Conference Room

Next Meeting: **9/27/2016** to review progress on forming the EWG, plan Visioning Workshop(s), refine ELT schedule and discuss the process of exploring a new school schedule

cc: Kathy Provenchor (LHS Admin), Mike McGivern (Asst. City Mgr), J. Drown (Sr. Project Mgr), A. Caritano (Asst. Project Mgr), D. Guarriello (Sr. Designer)

Attachments: **Educational Visioning and Programming Summary v5**

This Meeting Record is our understanding of the items as they were discussed. Please report any discrepancies to Perkins Eastman. If no discrepancies are reported in five working days, this Meeting Record will stand as published.

Perkins Eastman | DPC

MEETING RECORD

Date Prepared	9/28/2016	
Project Name	Lowell High School	
Project Number	67150	
Subject	**ELT Meeting 2**	
Meeting Location	LHS, Head of School Conference	
Meeting Date	**9/27/2016**	
Prepared By	Robert Bell	r.bell@perkinseastman.com
	T: 617-712-2115	F: 617-449-4049
Participants	Brian Martin (Head of School), Amy McLeod (Dir. Of Curric. Instr. & Assessment), Roxane Howe (Discipline & Operations), Jeanine Durkin (Deputy Supt. SSS), Richard Underwood (Dir. Of Operations), K.C. Nelson (Technology Mgr), MaryAnn Williams (Skanska), Robert Bell (PE/DPC), David Steven (NVD)	

New Business (Agenda Items)		Notes	Action by / Date Req'd
2.1	New ELT Participant	• K.C. Nelson, Network Manager & acting Technology Director	added to the ELT contact & distribution list (see updated attachment)
2.2	Field Trip to Other Schools	• The ELT would like to see example schools, preferably relevant urban loc's, and/or see the latest in school design. Winchester HS (Skanska was OPM) has new and reno with train track adjacent. Essex Tech, not urban, but has small school (academy) organization and distributed admin, dining and clusters. • Brian intends to expand the invitation to the SBC & others.	Mary Ann & Bob to coordinate potential tour locations & dates (**follow-up by next ELT**)
2.3	Visioning Schedule Update	• Workshop I is ok for October 14th, but all workshops are to be half day 7:30-11:30am. Workshop II will be Nov. 1st and Workshop III (assuming need) Nov. 17th • Jeannine will determine the location based on approximately 50 participants to be organized in tables of 6. Projection capability is needed • PE/DPC to fund simple breakfast (coffee/ pastries) to be provided by LHS culinary	Jeannine to look at options and reserve location(s) Brian (Kathy) to coordinate with the culinary group
2.4	Visioning Workshop(s)	• David provided an overview of the workshop presentations and activities;	

This Meeting Record is our understanding of the items as they were discussed. Please report any discrepancies to Perkins Eastman. If no discrepancies are reported in five working days, this Meeting Record will stand as published.

		Day 1 focused on learning goals, best practices and LHS's (SCOG) strengths, challenges, opportunities and goals. Day 2 will look at design patterns and guiding principles for the school project. Day 3 will focus on key spaces and adjacencies • Visioning process should weave-in LHS's 'Skills and Attributes of a LHS Student' • The School will participate in short presentations by academic groups	**David to forward slides** (for reference) and utilize LHS's Skills/ Attributes Amy to organize LHS's groups/presentation pieces for the workshop (**follow-up by next ELT**)
2.5	Assembling the Educational Work Group (EWG)	• 38 people have been identified so far, not including the design team • Including the Superintendent, City Management and other officials was noted as important to build broad consensus and validation, but must also be sure participants feel uninhibited. Representatives from LPS and the City are, or will be invited, including the Superintendent and Asst City Manager. • It was noted that ELT members, specifically should participate • Business partners not considered appropriate for the educational work	**David to provide an outline/description** of each session for Amy & Jeannine to utilize in the outreach Amy & Jeannine will continue to develop the list of EWG participants and **send-out the email with dates/descriptions**
2.6	Open Programming Items	• **Rethinking the school's schedule/cycle** (When/What would be the process)? The conversation is really just beginning. This process/project will tease it out, but unlikely to be completed within the project's programming process. Still, the discussions should begin to help inform and • **Increasing Life Skills/SPED populations** becoming a significant issue • Any information on **Safety and Security** (plans/policies) would be useful • Any Information on **Technology Plan** or initiatives would be useful	PE/DPC & NV to include school schedule as part of the Visioning work (**RB/DS to develop**) The school has Special Needs projections (**school to provide**) The school has a District Safety Audit (**school to provide**) K.C. to look into whether a plan or initiatives are in place (**school to provide**)

Next Meeting: **10/12/2016** at 1pm, Head of School Conference Room, to discuss fine-tuning of Visioning Workshops and confirm LHS staff presentation piece, review Program Analysis & discuss progress setting up tours

cc: Kathy Provenchor (LHS Admin), Mike McGivern (Asst. City Mgr), J. Drown (Sr. Project Mgr), A. Caritano (Asst. Project Mgr), D. Guarriello (Sr. Designer)

MEETING RECORD

Date Prepared	10/12/2016	
Project Name	Lowell High School	
Project Number	67150	
Subject	**ELT Meeting 3**	
Meeting Location	LHS, Head of School Conference	
Meeting Date	**10/12/2016**	
Prepared By	Robert Bell	r.bell@perkinseastman.com
	T: 617-712-2115	F: 617-449-4049
Participants	Brian Martin (Head of School), Amy McLeod (Dir. Of Curric. Instr. & Assessment), Roxane Howe (Discipline & Operations), Jeanine Durkin (Deputy Supt. SSS), Richard Underwood (Dir. Of Operations), K.C. Nelson (Technology Mgr), MaryAnn Williams (Skanska), Robert Bell (PE/DPC), David Steven (NVD)	

New Business (Agenda Items)		Notes	Action by / Date Req'd
3.1	Visioning Workshop(s)	• Confirmed room reserved/breakfast scheduled • Reviewed Agendas for WS 1, 2 & 3 • Discussed Faculty Presentation Groups • Reviewed Guiding Principles Slides • Discussed how/if to incorporate rethinking school Sched/Cycle.	David to email the agendas for each Work Shop and overview of Visioning A separate set of school Schedule/Cycle meetings will be planned via ELT.
3.2	Neighborhood/Community	• Reviewed Schedule Updates • Set tentative Community Mtg I for Dec 8, 6:30-8:30pm at LHS (Irish) Auditorium • Agenda for Neighborhood Mtg to include; o Overview of MSBA/process o Project scope/timeline o o Questions/Comments • Agenda for Comm Mtg to include; o Overview of Existing, o Share Visioning Goals, o Site Assessment o Preliminary Planning Concepts • Development of a flyer was discussed	PE/DPC to add neighborhood & community meetings to the ELT schedule PE/DPC to confirm date with City Mgr's Office (M. McGovern) prior to 1st Neighborhood Mtg
3.3	School Tours	• Scheduled Tours for Friday, Nov 18th (Essex Tech and Winchester HS)	PE/DPC to invite and confirm with City Mgr's Office (M. McGovern)
3.4	User Group Meetings	• To be scheduled for Tue/Wed, Nov 15/16 from 8am to 3pm	Roxanne to provide detailed schedule

This Meeting Record is our understanding of the items as they were discussed. Please report any discrepancies to Perkins Eastman. If no discrepancies are reported in five working days, this Meeting Record will stand as published.

3.5	Program Analysis Update	• Near Complete (finding all stu's/periods) • Some Questions/Follow-up needed • Note block schedule (8per x 5days = 40) would allow increased sections ea. course	PE/DPC to reach out to Mark Lew
3.6	Outstanding Items	• **Room Assignment Plan Needed** • **Formal Policy on Class Size?** • **Life Skills/SPED Projections?** • **Safety and Security Distr. Audit?** • **Technology Plan?**	Roxanne to forward room assignment info Brian/Jeanine to check on class size/policies No change in SPED projections (remains 15%); the needs have changed within the % Jeanine to provide info on Safety/Security Audit KC to forward District Technology Plan

Next Meeting: **10/26/2016** at 1pm, Head of School Conference Room

cc: Kathy Provenchor (LHS Admin), Mike McGivern (Asst. City Mgr), J. Drown (Sr. Project Mgr), A. Caritano (Asst. Project Mgr), D. Guarriello (Sr. Designer)

MEETING RECORD

Date Prepared	11/8/2016	
Project Name	Lowell High School	
Project Number	67150	
Subject	**ELT Meeting 4**	
Meeting Location	LHS, Head of School Conference	
Meeting Date	**10/26/2016**	
Prepared By	Robert Bell	r.bell@perkinseastman.com
	T: 617-712-2115	F: 617-449-4049
Participants	Brian Martin (Head of School), Amy McLeod (Dir. Of Curric. Instr. & Assessment), Roxane Howe (Discipline & Operations), Jeanine Durkin (Deputy Supt. SSS), Richard Underwood (Dir. Of Operations), K.C. Nelson (Technology Mgr), MaryAnn Williams (Skanska), Robert Bell (PE/DPC), David Steven (NVD)	

New Business (Agenda Items)		Notes	Action by / Date Req'd
4.1	Neighborhood/Community	• Thoughts on Initial Meeting were discussed. Focus seems to be on sites and desire to keep in town. • Some refinement of the slide show will occur to keep more on-point (process). • Brian and/or Amy and Roxane plan to attend each meeting. It was suggested that our presentation be put first on each agenda. • The Schedule (Programming/Visioning) was reviewed, including dates/times for Tours, User Groups & Full Community. A full faculty presentation was targeted for December 7th; intent will be to bring them along with Visioning and solicit thoughts • Brian suggested someone from each Neighborhood Group present at the large Community Meeting (desire to keep school at current location) • The 11/23 ELT meeting will be rescheduled to 11/30	PE will edit the slides for ongoing Neigh. Group meetings Locations for each Neigh. Group meeting will be added PE to provide updated schedule
4.2	School Tours	• Scheduled for Fri, Nov 18th (times established to wrap-up by early afternoon to allow Amy to participate). Transportation will be left to individuals.	PE/Skanska confirmed 8-10am at Essex Tech & 10:30-12:30 at Winchester HS.
4.3	User Group Meetings	• Scheduled for Tue/Wed, Nov 15th/16th	Start times will be moved earlier (7:15am)

This Meeting Record is our understanding of the items as they were discussed. Please report any discrepancies to Perkins Eastman. If no discrepancies are reported in five working days, this Meeting Record will stand as published.

		• Review of the list of meetings suggests a few more need to be added (kitchen, custodial, media center, technology)	to accommodate additional meetings
4.4	Program Analysis Update	• Program Analysis Complete; very few pupil periods not found. • Future Adjustments were discussed, with no specific change in emphasis. The enrollment increase will be prorated (proportionally) across all curricula.	PE will proceed into Program Adjustments (step 2 of 3)
4.5	Visioning Workshops	• Thoughts on Workshop I were exchanged; in general, very positive. The work group is very active/participatory and represents a good cross-section of the community and school. • Workshop II, Tuesday	PE to send Workshop II agenda Friday
4.6	Other/Outstanding Items	• Formal Policy on Class Size is needed • Safety and Security Distr. Audit is in the works • School Schedule will continue to be discussed at the ELT meetings. Amy and Bob to exchange thoughts. • It was notes that Roxane's email is incorrect in the documents and the distribution	LHS to provide direction on class size targets at 11/9 ELT meeting Safety/Security Audit cannot be shared at this time; still under review with the SC PE will correct Roxane's email in the distribution list and documents

Next Meeting: **11/9/2016** at 1pm, Head of School Conference Room

cc: Kathy Provenchor (LHS Admin), Mike McGovern (Asst. City Mgr), J. Drown (Sr. Project Mgr), A. Caritano (Asst. Project Mgr), D. Guarriello (Sr. Designer)

Perkins Eastman | DPC

MEETING RECORD

Date Prepared	11/30/2016	
Project Name	Lowell High School	
Project Number	67150	
Subject	**ELT Meeting 6**	
Meeting Location	LHS, Head of School Conference	
Meeting Date	**11/30/2016**	
Prepared By	Robert Bell	r.bell@perkinseastman.com
	T: 617-712-2115	F: 617-449-4049
Participants	Brian Martin (Head of School), Amy McLeod (Dir. Of Curric. Instr. & Assessment), Roxane Howe (Discipline & Operations), Jeanine Durkin (Deputy Supt. SSS), Richard Underwood (Dir. Of Operations), K.C. Nelson (Technology Mgr), MaryAnn Williams (Skanska), Robert Bell (PE/DPC)	

New Business (Agenda Items)		Notes	Action by / Date Req'd
6.1	Educ-Programming Questions	• Night School occurs on the top floor of Lord (600's rooms) • Culinary should follow Ch.74 guidelines, despite not being a Ch.74 prgm • Target class size averages similar to existing (typical academics at 24-25), but plan rooms to fit 30-32 sizes (900sf OK) • OK to plan for some ½ size classrooms • SPED keep class sizes as existing, but plan for change in participation • ELL to be sized for 20 student avg. • PE, Fine-Arts, Tech/TV to maintain current class size averages • Eliminate unassigned computer labs (incl. World Language) • Main Office w/ (1) Bursor + Accts Payable • Need Data/Tech Center + School Scheduler and Teachout space • Need space for (2) instruct specialists • Need testing room storage • Need substitute teacher office • Need adult education office • Need peer mediation office • Need Latino connection office	PE to revise Program Adjustments calc's accordingly LPS to provide information on SPED changes (see email)
6.2	Planning for Full Faculty Mtg	• Meeting is set for December 7th, 12:15. PE/NVD would be scheduled for 12:30-1pm	PE to email D. Stephen regarding the time/loc.

This Meeting Record is our understanding of the items as they were discussed. Please report any discrepancies to Perkins Eastman. If no discrepancies are reported in five working days, this Meeting Record will stand as published.

		• Intent is to provide overview of process, bring everyone up to speed on Visioning and teachers can follow-up	
6.3	Planning for Community Mtg	• Set for December 8th • Might be good to have Neighborhood Groups speak	Clarify location (Neighb. Groups have been told Irish Auditorium)
6.4	Start Educ-Program Narrative	• Needs to be developed in-time for mid-January SBC/SC approval • Narrative needs to be in sync with the Visioning objectives, User needs & Space Summary tabulations • Each section needs to describe what happens now and what is intended to change for the future • Provide particular explaination regarding the Auditorium size, Pool need, Little Theater and Other category spaces. • See Mt. Greylock example (sent prior)	PE to forward MSBA Educ-Program Template and example(s)

Next Meeting: **12/14/2016** at 1pm, Head of School Conference Room

cc: Kathy Provenchor (LHS Admin), Mike McGovern (Asst. City Mgr), J. Drown (Sr. Project Mgr), A. Caritano (Asst. Project Mgr), D. Guarriello (Sr. Designer)

MEETING RECORD

Date Prepared	12/14/2016	
Project Name	Lowell High School	
Project Number	67150	
Subject	**ELT Meeting 7**	
Meeting Location	LHS, Head of School Conference	
Meeting Date	**12/14/2016**	
Prepared By	Robert Bell	r.bell@perkinseastman.com
	T: 617-712-2115	F: 617-449-4049
Participants	Amy McLeod (Dir. Of Curric. Instr. & Assessment), Roxane Howe (Discipline & Operations), Jeanine Durkin (Deputy Supt. SSS), MaryAnn Williams (Skanska), Robert Bell (PE/DPC)	

New Business (Agenda Items)		Notes	Action by / Date Req'd
7.1	Educ-Programming & Space Summary Questions	• Maker Space should be readily accessible (not part of any specific 9th grade team) • Freshman has 3 teams now (of 8, 8 & 12) but with increased enrollment will become 4 teams of 8 • Tech program missing clean-energy • Culinary should increase to Ch.74 • Banks at 400sf is fine • PE; change gymnastics room to multi-purpose (gymnastics, yoga, cheering) • Athletics has sep office, conference and secretary • Athletics needs a finance office with safe • Would like stage increased per larger productions (match existing) • Could explore 2 cafeterias (one freshman) with satellite serving • Need separate main student support space (they handle enrollment fulltime) • 1 of the 2 greenhouses listed is actually a copy room (near D-House) • Technology Center spaces are to be listed within the Media Center sf (incl. CR size Tech Center as half storage, full CR for Teacher Training Lab with Instr. Tech Specialist desk and ½ CR data processing • Don't need SPED testing	PE to make necessary adjustments to all programming docs and the space summary Maker space and clean energy labs to be part of Vocations & Techn PE to email Brian to set-up a conference call (Friday) w/ Athletics to broach the difference between requests and what can be justified

This Meeting Record is our understanding of the items as they were discussed. Please report any discrepancies to Perkins Eastman. If no discrepancies are reported in five working days, this Meeting Record will stand as published.

		• PAL's program does not need separate or dedicated space (can use meeting space within the Library) • Interactive Learning does not need separate or dedicated space (occurs in any CR) • TRIO programs are for 1st generation college students • MCAS/Testing storage can be part of Media Center space	

Next Meeting: **1/11/2016** at 1pm, Head of School Conference Room

cc: Kathy Provenchor (LHS Admin), Mike McGovern (Asst. City Mgr), J. Drown (Sr. Project Mgr), A. Caritano (Asst. Project Mgr), D. Guarriello (Sr. Designer)

Perkins Eastman | DPC

MEETING RECORD

Date Prepared	1/11/2017	
Project Name	Lowell High School	
Project Number	67150	
Subject	**ELT Meeting 8**	
Meeting Location	LHS, Head of School Conference	
Meeting Date	**1/11/2017**	
Prepared By	Robert Bell	r.bell@perkinseastman.com
	T: 617-712-2115	F: 617-449-4049
Participants	Brian Martin (Head of School), Amy McLeod (Dir. Of Curric. Instr. & Assessment), Roxane Howe (Discipline & Operations), Jeanine Durkin (Deputy Supt. SSS), Richard Underwood (Dir. Of Operations), K.C. Nelson (Technology Mgr), Salah Khelfaoui, Ph.D. (Superintendent), Robin Desmond (Interim Asst. Supt Curric. & Instruction), Steve Gendron (School Committee), Mike McGovern (Asst City Manager), Rodney Conley (Deputy Chief Finance Officer), Gary Frische (School Business Administrator), MaryAnn Williams (Skanska), Robert Bell & Alicia Caritano (PE/DPC)	

New Business (Agenda Items)		Notes	Action by / Date Req'd
8.1	Overview of the Educational Program Narrative	• Major milestone and accomplishment. The Educ-Program is a pivotal document and becomes the foundation for design & decisions moving forward. • The document can evolve and will likely be edited through the next phase (May) • The document comes from the District and is supplemented by the design team charged with interpreting it into design and space needs (refer to the blue text)	Next Steps include review of space summary for alignment with Educ-Program LHS to re-forward the NEASC Report to PE
8.2	Review Educational Program Narrative	• Reviewed the Educational Program, including NEASC Report as Appendix • **Educ Program Requirements**; ELL and SPED should be noted as also being dispersed with academic clusters • **Grade & School Config Policies**; major objective is to bring freshman on-site. It was noted that the full-reno option does not. District to add safety concerns w/ off-site and on street. The benefits of returning the F.A. facility to the school were noted. • **Class Size Policies**; the class size average of 24 is being used vs MSBA's default 23. It was noted that despite the enrollment increase, the count of classrooms is dropping due to the difference in current	PE (Bob) and ELT (via Amy/Roxane) are to edit sections as noted

This Meeting Record is our understanding of the items as they were discussed. Please report any discrepancies to Perkins Eastman. If no discrepancies are reported in five working days, this Meeting Record will stand as published.

		and required utilization of rooms (71% exists vs 85% required) • **School Schedule**; traditional 35 period cycle and short periods. Desire for longer periods in the future would not skew the program calculations or participation because hypothetical new schedule could be 5 longer periods/day on a 7day cycle (same 35 periods) • **Teaching Methodology & Structure**; larger, more flexible classrooms are needed to better support project based activities and collaborative learning. Rooms are intended to be clustered pockets of STEM and Humanities that are in close proximity with good visibility and connectivity, including break-out spaces. All rooms are to be high-performance, fully wireless. • **ELL**; ELL teams are 4 rooms but dispersed as 2 room clusters integrated with other academics. • **Academic Support**; Need to add instructional specialist to teacher's center • **Lunch/Breakfast**; school will be switching from 4 lunch periods to 3 (matches MSBA standards). The school would like to increase breakfast participation • **Arts**; larger rooms than the MSBA guides are based on larger class sizes than the State assumes. • **PE**; reconciling the wants vs needs is a major challenge. The MSBA standards focus on PE needs, not Athletic. 9 PE teaching stations are justifiable. The goal of co-locating ROTC and SPED multi-purpose space with the Gymnasium will allow greater flexibility and usage for Athletics. Despite creative planning, a 200meter track does not fit within the Gym+ROTC+SPED Adaptive PE combined. Pools are not funded by the MSBA. **Question was raised if a larger Field House would be justifiable by the State given the lack of outdoor space.** Skanska noted the intent to have a conversation with the MSBA to see if there would be any wiggle room on reimbursement. • **Special Education**; existing spaces (along with science) are the most deficient.	

This Meeting Record is our understanding of the items as they were discussed. Please report any discrepancies to Perkins Eastman. If no discrepancies are reported in five working days, this Meeting Record will stand as published.

		SPED space needs are unique to each school, no real standard. • **ROTC**; 1 additional classroom is required • **Chapter 74 Programs**; PE to reconcile the space needs based on FTE of students. • **Transportation**; Add a section on the benefits of the parking garage. It was noted that visitor parking must align with the number of people that come (10k last year). Bussing will need to be determined by the City if a remote site is selected. • **Security**; PE to add a description of zoning the building for community and after-hours use and lock-down. Layers of security (passive and active) will be used. Current protocol to be described by the ELT, including use of Tsongas Arena in emergencies. It was noted that subsequent workshops will be planned for Safety/Security planning.	
8.3	Reference Space Summary	• This document is the companion to the Educational Program. It • Need to increase number of Data Closets • DESE space requirements to be determined based on Marketing FTE. FTE is not an exact science given students are scheduled as an elective.	PE to reach out to the DESE for precedent (Note; follow-up with DESE's Gary Gomes 781.338.3851 did not yield any helpful info)
8.4	Timeline Going Forward	• Edits will take a few days • ELT endorses the Educ Plan, Brian Submits to the Superintendent & School Committee for review • Steve wants to put on the agenda for next Wednesday (Facilities Sub-Committee); Sub-Committee makes recommendation to the School Committee (Feb 1st)	

Next Meeting: **1/18/2017** Tentative Overview of Educ-Program (Narr) prior to 1/24 SC-Facilities Sub Committee Review

cc: Kathy Provenchor (LHS Admin), Mike McGovern (Asst. City Mgr), J. Drown (Sr. Project Mgr), A. Caritano (Asst. Project Mgr), D. Guarriello (Sr. Designer)

Lowell High School Existing Conditions Evaluation/
Base Repair Report
Reference: Perkins Eastman Project # 67150.00

Part I: Existing Conditions Analysis
I. Location:

Lowell High School is located along Father Morissette Blvd and Arcand Drive. The Freshman Academy is detached and located at the intersection of Paige Street and John Street adjacent to which is the Steam Plant. The two main high school structures are the Lord building and the Kouloheras Building which span a segment of the National Historic Park's Merrimack Canal and Lucy Larcom Park.

II. Circulation:

Kouloheras Building: There are (4) secured entry/egress points along Kirk Street. These doors are locked for entry by visitors. All visitors are directed to the main entrance at the Lord Building. Kirk Street is one way heading north with two through lanes and temporary on-street parking/ 30 min loading spaces on either side. The majority of spaces on the west side of Kirk directly in front of the school are marked as tow zone. There is an accessible entrance/ramp at the North side of the building.

Sidewalks along Kirk are a minimum of 8-feet wide with the western sidewalk being wider. There are approximately 5 crosswalks spanning Kirk Street in front of the Kouloheras building all of which are flush and denoted with paint. Other streetscape features are limited but include post lights and street trees. There were no benches and trash receptacles. Visibility of signage could be improved. There is an accessible entrance/ramp at the North side of the building.

Lord/Fieldhouse Building: The field house has the largest street frontage on the corner of Father Morissette Blvd and Arcand Drive. The main entrance is located between the field house and the Lord building along Father Morissette Blvd across from the George Ayotte Garage. All bus drop-off takes place at this entrance. This includes limited drop-offs in the morning and transportation to afterschool activities in the afternoon. There are approximately 4 compact HC spaces at this entrance and an additional 4 spaces are located at the south side of the field house.

Freshman Academy: The Freshman Academy is located between Paige Street and French Street with secured entrance on Paige Street and the HC Entrance on the West. Both Paige and French street are two way with ample sidewalks. There are numbered on-street parking spaces on the South Side of Paige Street. Street furnishings such as lights and trees are limited along Paige Street. French street is wider with 4 lanes of traffic and is the extension of Father Morissette Blvd. Sidewalks are approximately 8' but with limited site furnishings. The entrance on French street is directly aligned with Boarding House Park. Parking for the Freshman Academy is on-street or at the George Ayotte or Joe Downes Garage.

Steam Plant: The Steam Plant is located adjacent to the Freshman Academy along French Street with a service drive between the two.

Pedestrian circulation includes walking to and from the parking garage across Father Morissette Boulevard at the beginning and end of the day. Circulation during the school day includes walking along the public sidewalks between the

buildings, along the Canal Park and through the skywalks across the canal. There is a lot of activity of students coming and going on and off campus throughout the day.

III. Parking:

The majority of staff, visitors and students use the George Ayotte parking garage (capacity of 1200). Additional parking is found at the Joe Downes Garage or street parking. All parking garages are owned and managed by the City of Lowell. Parking in the George Ayotte garage is free for employees. Student parking passes cost $17 a month.

IV. Vehicular Access:
The majority of students walk, bike or use public transportation (buses) to get to school. The breakdown is as follows: approximately 1/3 walk, 1/3 are dropped off and 1/3 drive or take public transportation. There is not a dedicated drop off and according to staff, cars back up on Father Morissette Blvd and surrounding streets in the mornings and afternoons. There are 4-6 contracted buses that take students after school to different sports facilities.

V. Emergency Access:

There is full fire access around the school on the public streets and through service areas.

VI. Trash Removal, Deliveries and Maintenance Storage

A loading dock and trash/recycling area is located behind the field house in the southeast corner.
Deliveries to the school involve the following:
1. Food 3 times /week
2. Paper products 1 time/month
3. Miscellaneous deliveries all go to the loading dock.
Trash Removal includes the following:
1. (1) 40 yard recycling dumpster located by the dock- removed as needed
2. (2) 10 yard dumpster located by loading dock –removed every day.
3. Food waste is not recycled

VII. Greenspace and Athletics

LHS uses two City-owned facilities- Shedd Park and Martin Cawley Athletic Complex. These two complexes accommodate the majority of the high school's athletic programs. The Cawley Complex has a brand new track and a synthetic turf football field (10 years old but still in good condition.) Both complexes are maintained by the City and students are bused to them. The Cawley complex is about 2 miles from LHS.

The Crew team uses Lowell UMass facilities and Hockey utilizes the Tsonga Center. Gymnastics and swimming is located in the field house.

Do to constant use of the multi-use fields at the Cawley Complex the fields do not have time to rest causing less then optimum surface conditions. The athletic department would benefit from an additional full sized multi-use field.

Currently there is no greenspace directly around the school for use by athletics or during gym class. Occasionally gym classes and teams will use the small lawn area outside of the Tsonga center across from the school. The school would benefit from a lawn area that is within the school campus and can be accessed by foot in less than 5 minutes.

Part II: Base Repair Report

I. Kouloheras Building:

Paving around the Kouloheras building is in overall good condition. Site amenities around the building such as bike racks, benches and secured trash receptacles are limited. Benches should be added at all entrances to accommodate all students and visitors.

Plant beds are limited to around the school and consist of mostly eroded lawn and overgrown shrubs against the foundation. Shade trees are limited and should be added around the entire building and more specifically at the entrances to provide shade.

II. Lord/Fieldhouse Building:

Entrance and Paving. The paving at the main entrance to the high school between the Lord Building and Field house is in poor condition and has cracked and heaved in multiple locations. These pose HC accessibility issues and create dangerous tripping hazards. Due to its location the entrance is also dark and poses visibility issues from some angles.

Cracked Paving at the Entrance.

Plaza Condition

Entrance plaza along Father Morissette Blvd is in poor condition with patched pavement and completely devoid of seating and pedestrian lighting and wayfinding. The curb ramp at the crosswalk accessing the school is poorly defined and without tactile warning plates. The curb reveal at this plaza is minimal and safety bollards should be considered. Plaza is wide open and lacks any sort of shade structure or trees from protection from the sun.

Curb Ramp at Entrance Plaza

Curb ramps at all crossings around the school need to be upgrading to meet current MA ADA standards.

Sidewalks along the canal side of the Lord building are in decent condition however despite their level of use there walkways are without benches and lighting. Trash cans are movable units and are not secured from being opened or moved. Walkway along the canal side of the Kouloheras building is in similar condition and also lacking seating and adequate lighting.

Walkway along the Canal Side of the Lord Building

Plant beds at entrance are in disrepair and creating erosion issues along the sidewalks.

Erosion onto sidewalks

HC parking spaces along Father Morissette Blvd do not meet MA ADA standards for accessible parking spaces and need to be re-constructed or re-located.

Compact HC Spaces

Asphalt service road is in poor condition with cracks and large low points creating drainage issues. Walkway around along western side of the field house is asphalt. Pathway is worn and extremely uneven with cross pitches in some cases exceeding 2%. Lack of curbing creates safety issues compounded by limited sidewalk widths.

Service Road and Walkway

Small egress plaza at west side of field house is unprotected against vehicular traffic allowing for cars to park in it. Plaza needs to be regraded to include curbing or additional bollards added.

Signage needs to be added around loading area and the field house to better define pedestrian and vehicular traffic.

III. Freshman Academy

Sidewalks are in good condition surrounding the Freshman Academy. Benches need to be added at all entrances. Street trees need to be added to provide shade at all entrances.

Lowell High School Existing Conditions Evaluation/Base Repair (Plumbing and Fire Protection)

VAV International

Perkins Eastman Project # 67150.00

Introduction

The base redesign covers five buildings. The Field House shares domestic cold water, and gas services with the Lord Building and Kouloheras Building. It also shares its fire protection services with the Lord building. The Kouloheras Building has its own fire protection service. The Freshman Academy has its own domestic cold water service and fire protection service and fire pump. The Steam Plant Building also has its own domestic cold water service, and shares its gas service with the Freshman Academy. The only building not provided with sprinklers is the Field House.

In general, for all five buildings, the piping is past its useful life. Hot water is supplied by a combination of electric water heaters and old gas-fired hot water storage tanks, decreasing efficiency. New, high-efficiency gas-fired hot water heaters are recommended to replace these.

The following existing conditions report provides more information on each of the buildings along with a summary of recommendations.

Kouloheras (1892, 1922 & 1997) Building:

Fire Protection

The Kouloheras building sprinkler system is served by a 4" water line, entering the east side of the building. The service is located in the basement, underneath Stair C. The building has sprinklers throughout, with FDV connections in the hallways. The only exception is the Teachers work room on the third floor, which is not provided with sprinklers. Protection will need to be provided in this area. The auditorium stage also has FDVs at each end, as required by code.

(Left) Fire protection service
(Right) FDV at stage

Plumbing

General

The waste and water piping in the Kouloheras building is past its useful life, and it is recommended to replace it. The building contains bathroom cores as well as art rooms, janitor's closets, lab rooms and a teaching kitchen. The fixtures in the bathrooms are not low-flow and it is recommended to replace them. The sinks in these lab rooms do not appear to be connected to an acid neutralization tank. A central neutralization system or local 5 gallon acid neutralization for each sink should be added. The emergency eyewashes do not appear to be served by tempered water, which is required to meet code. The hot water comes from the two domestic storage heaters in the basement of the Field House.

Drinking Fountains

The building has different types of drinking fountains throughout. Some were out of service.

(Left) Typical Handicapped accessible drinking fountain
(Right) Typical drinking fountain

Art Rooms

There are multiple art rooms in the basement of the Kouloheras Building. They each have an art sink. Only one of the art sinks had a solid's interceptor. A solids interceptor should be added per plumbing code.

(Left) Art room sink without solid's interceptor
(Right) Art room sink with solid's interceptor

Teaching Kitchen

There is a teaching kitchen located in the basement. It contains equipment that is served by the building's gas line. The kitchen has no floor drains, and the grease interceptor that serves the 3-bay sink is in poor condition.

(Left) Teaching kitchen

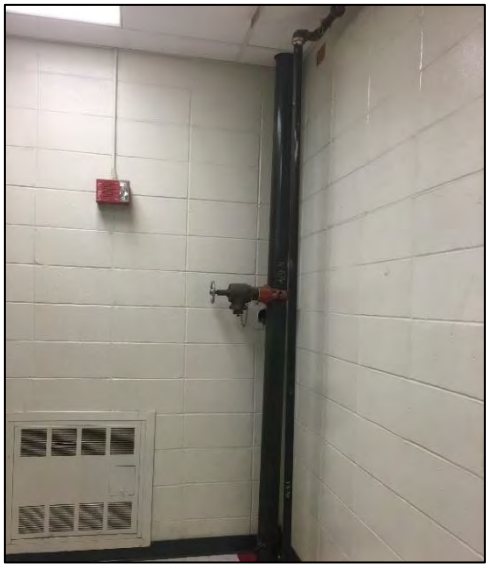
(Left) Three bay sink
(Right) Grease Interceptor

Lord/Field House 1980 Building:

Fire Protection

General

The 6" fire protection service for both the Lord building and the Field House is located in the basement of the Field house. The Field House itself is does not have sprinklers, but does have FDV's throughout. Due to the Base Repair encompassing a major renovation, a fire suppression system should be installed . The Lord building has standpipes with FDVs in the stairwells, as well as sprinkler heads in the entire building.



(Left) Standpipe with FDV
(Right) FDV with hose cabinet

(Above) Fire Protection Service

Plumbing

General

The Field House and Lord Building is served by a 6” domestic cold water services that enters through the basement of the Field House. Two gas fired domestic hot water storage heaters are also located in the basement, and account for the hot water for the Lord Building, Field House, and Kouloheras Building. It is recommended that the gas-fired storage tanks be replaced with new High Efficiency gas-fired hot water heaters. The 6” waste for the Field House exits on the west side, and the 6” RWL exits on the north.

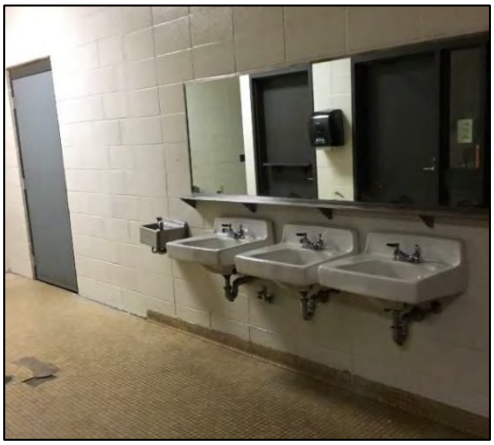
The two buildings together contain locker rooms, bathroom cores, and lab rooms. The fixtures in the bathroom cores, like with all the other buildings, are outdated, and it is recommended to replace them.

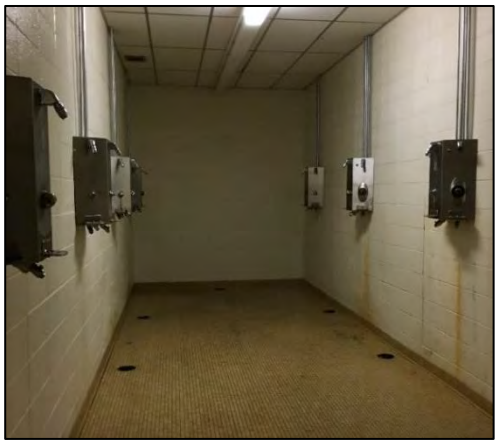
(Above) Domestic Cold Water Service

(Above) Gas fired domestic hot water storage heaters

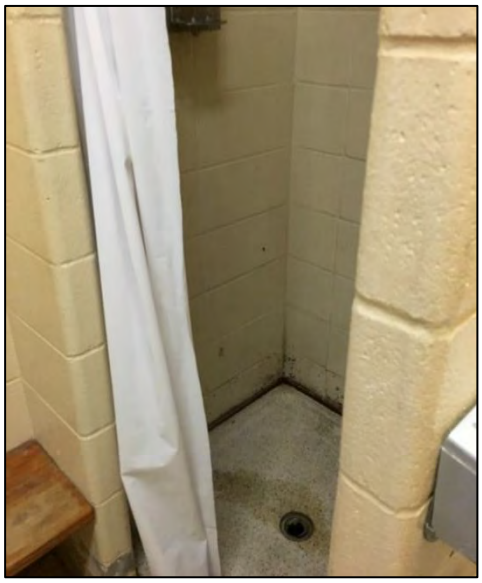
Locker Rooms

The Field House contains a swimming pool, as well as large women and men's locker rooms. The locker rooms have communal showers, as well as individual shower stalls. Per 248 CMR 10.10 "In shower rooms or in an area that multiple shower heads are installed and the individual shower space, area, stall or compartment is not provided with an individual waste outlet, the waste outlet shall be so located that the floor is designed and pitched so that waste water from one shower head area does not flow over the floor area serving another shower head area". The communal showers and the locker room showers and the "Type 2" showers may not meet these requirements.





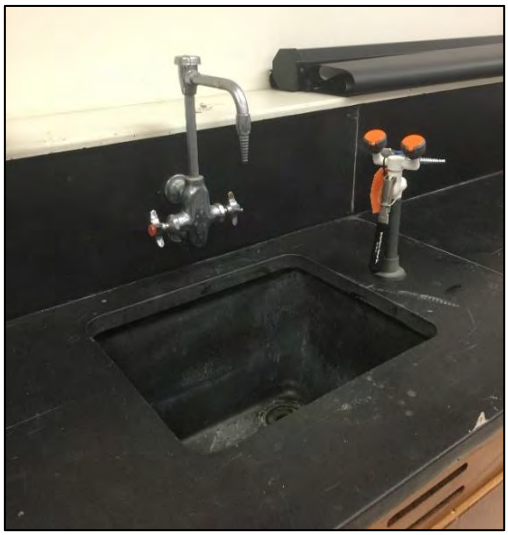
(Left) Locker room sinks
(Right) Communal locker room showers



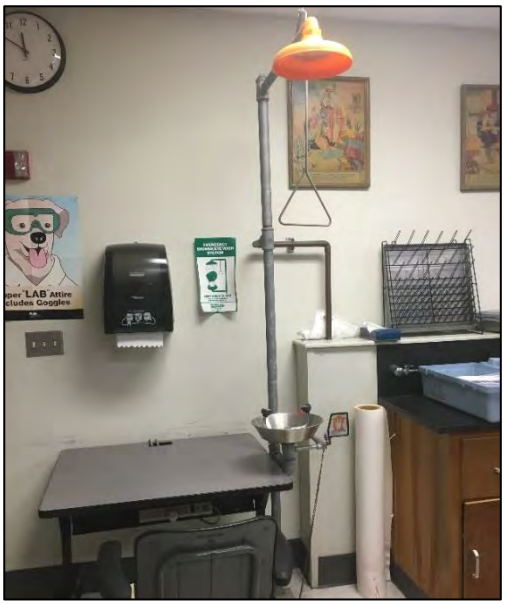
(Left) Locker room showers (Type 2)
(Right) Locker room showers (Type 3)

Lab Rooms

The Lord building houses lab rooms. The sinks in these lab rooms do not appear to be connected to an acid neutralization tank. A central neutralization system or local 5 gallon acid neutralization for each sink should be added. The lab also has gas connections, and an emergency gas shutoff located a few inches from the floor, in the back of the classrooms. They should be located at the exit door of the rooms, per code. The emergency eyewashes do not appear to be served by tempered water, which is required to meet code.



(Left) Typical Lab room
(Right) Typical Lab sink(Left) Typical Lab room



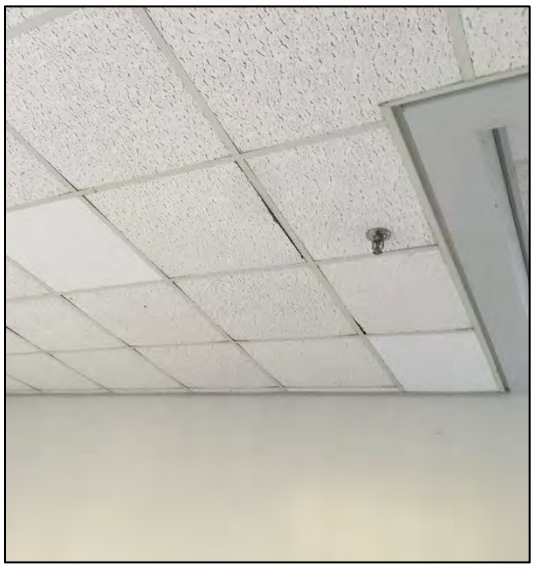
(Left) Emergency eyewash
(Right) Emergency gas shut off

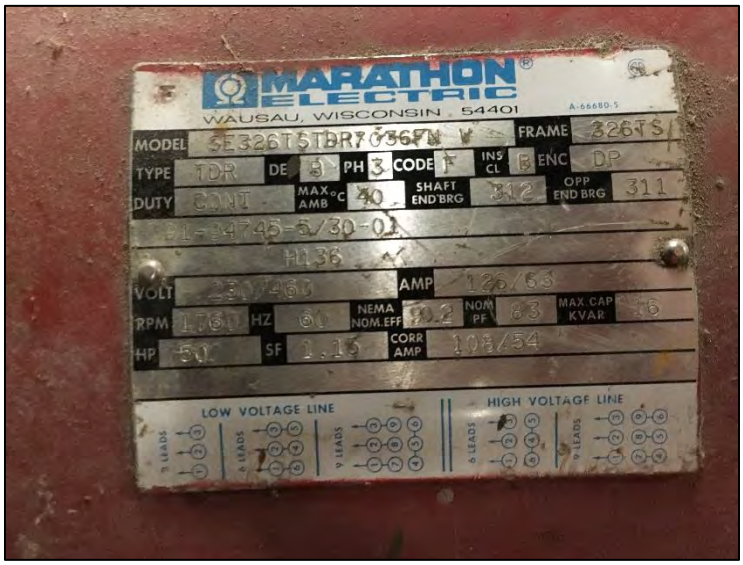
Freshman Academy Building:

Fire Protection

General

The entire Freshman academy is sprinklered and meets NFPA 13 requirements. Standpipe and FDVs are located on each floor, in the stairwell. The sprinkler service and a 50HP fire pump assembly is located in a closet, next to the domestic cold water service. The photos and labels are provided below.





(Left) Typical sprinkler
(Right) Fire Pump Equipment Label

(Above) Fire Protection Service and Fire Pump Assembly

(Above) Recessed FDV in stairwell

Plumbing

General

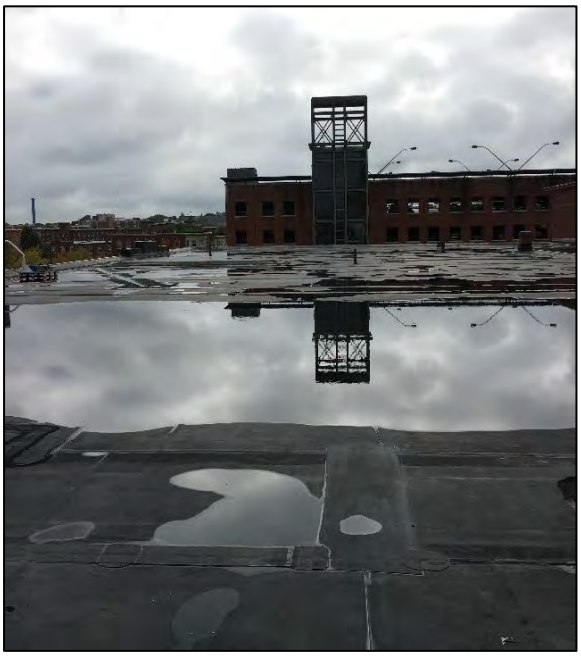
The domestic cold water service for the building enters at the fire sprinkler room. The electric water heater in that same room provides the building's hot water. It is recommended that this heater be replaced with a new energy efficient gas-fired hot water heater. The Freshman building has bathroom cores, as well as life skill rooms which contain sinks and gas-fired stoves.

(Left and Right) Hot water heater in sprinkler service room

(Above) Domestic Cold Water in sprinkler service room

Roof Drains

There is ponding on the roof of the Freshman building. New roof drains should be added since all flat roofs are being proposed to be replaced.



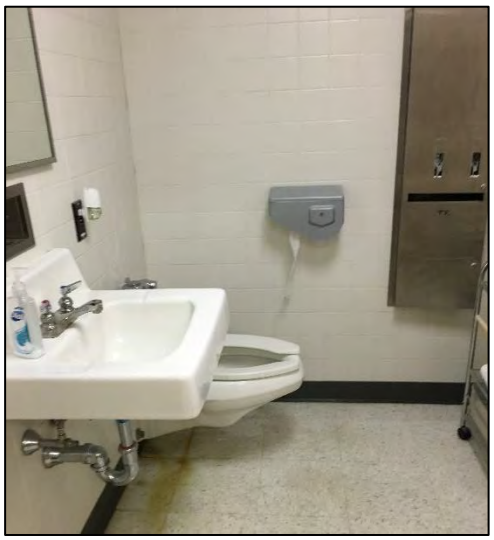
(Left and Right) Water accumulation on roof

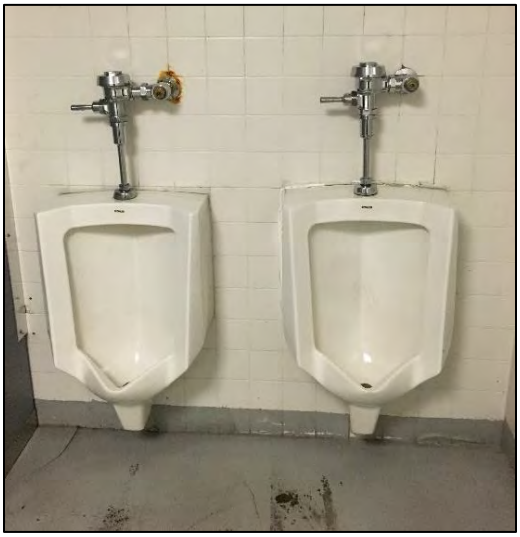
Life Skill Classrooms

Below are images of a typical life skills classroom. They are outfitted with kitchen sinks, as well as gas stoves.

(Left) Typical stove in Life Skills classroom
(Right) Typical sink in Life Skills classroom

Bathrooms

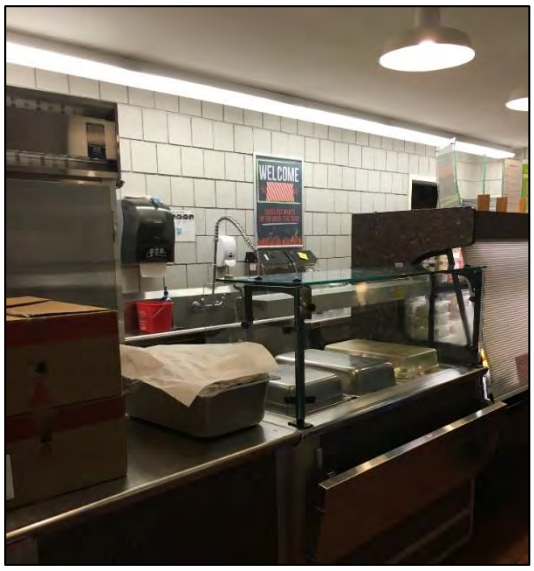




(Left) Typical toilet and lavatory
(Right) Typical urinals

Serving Kitchen

There is a serving kitchen in the Freshman Academy. The purpose of it is mostly for heating and serving food. No actual cooking is done. It is served by its own hot water heater, located in the kitchen itself.



(Left) Small serving kitchen
(Right) Kitchen's hot water heater

Steam Plant Building:

Fire Protection

General

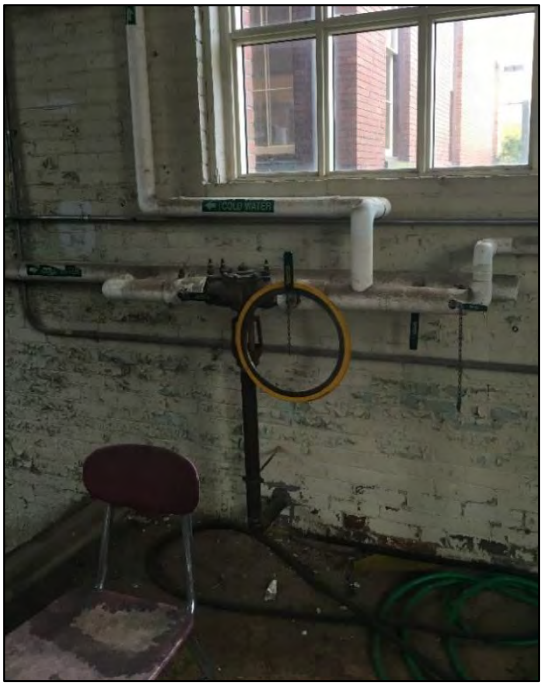
The Steam Plant Building is protected with upright heads. It shares the fire protection services with the Freshman Academy.

(Above) Upright heads

Plumbing

General

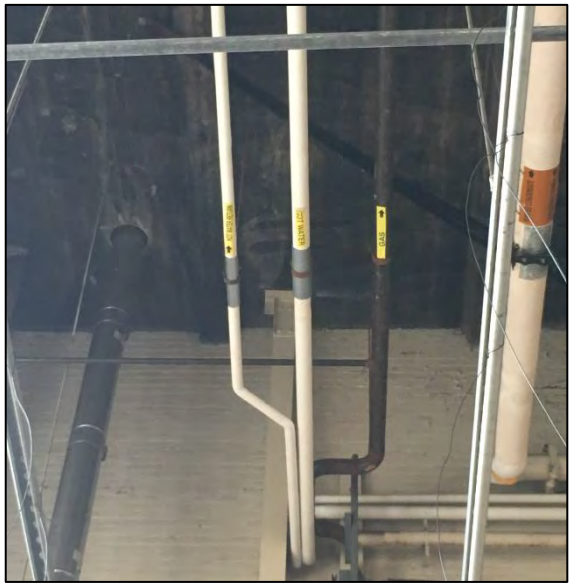
The Steam Plant Building contains a domestic cold water service as well as a domestic hot water heat exchanger. The hot water and hot water recirc. run between the heat exchanger and the Freshman Academy. On the side of the building is the gas service and meter which serves both the Steam Plant Building and Freshman Academy. There is flooding in the steam building, and the drainage system may need to be modified.



(Left) Wet Floors
(Right) Domestic Cold Water

(Above) Domestic Water Heat Exchangers

(Above) Gas Service (Serves Steam Building and Freshman Academy)



(Above) Hot water and hot water recirc. going to Freshman Academy

Recommendations:

Fire Protection

1. All existing sprinkler piping and heads in the Kouloheras Building, Freshman Academy, and Lord building to be demolished. Provide all new fire suppression system throughout the building in compliance with NFPA 13. Existing services to building can be reused.
2. Due to the Base Repair encompassing a major renovation, sprinkler heads should be installed throughout the Field House in accordance to NFPA 13.

Plumbing

1. Per ASHRAE and ASPE, water piping and insulation have a life expectancy of 25-30 years. Piping is past it's useful life. Consider replacing all water, waste and vent piping in all five buildings.
2. Replace all bathroom fixtures with new low-flow, sensor operated faucets and flush valves.
3. Provide new roof drains on all flat roofs being replaced.
4. Replace all existing electric water heaters with high efficiency gas fired water heaters.
5. Grease traps in the kitchens are past their useful life. Should be replaced.
6. Complaints regarding lack of floor drains in teaching kitchen. Floor drains should be added.
7. Emergency gas shut offs should be located by the exit doors of all lab rooms.
8. Emergency eyewashes did not appear to be served with tempered water. Tempered water loop needs to be added per plumbing code.
9. Lab sinks did not appear to have an acid neutralization system. A central neutralization system or local 5 gallon acid neutralization for each sink should be added per plumbing code.
10. Replace gas fired domestic hot water storage tanks in Field House with high efficiency gas water heaters.
11. Add floor drains or modify floor slope of showers in locker rooms to meet 248 CMR 10.10 requirements.
12. Add solid interceptors to all art sinks.
13. Modify drainage system in the Steam Plant Building to prevent future flooding.
14. Add regular and handicapped fountains to all buildings to meet code requirements the code requirement of 1 drinking fountain per 75 people. 248 CRM 10.10 also states that "wherever drinking fountains are provided, a drinking fountain shall be accessible to the physically impaired".

Lowell High School Existing Conditions Evaluation / Base Repair Security Report

Introduction

TSG Solutions ('TSG') is a professional risk management and security engineering firm located in Quincy, Massachusetts. TSG performs a multitude of security consulting functions including: risk and vulnerability assessments, strategic security planning, policy and procedure development, integrated system design, and development and implementation oversight of enterprise-wide security solutions.

TSG was engaged by Perkins Eastman to provide technical expertise in the development of a security existing conditions evaluation for the Lowell High School (LHS). The intent of the evaluation is to provide insight into the current status of security systems, physical security elements, and security/emergency procedures that should be considered during the assessment of upgrades to the facility.

Although the fundamental goal is to provide a safe and secure environment that promotes students individual and educational growth, there is a delicate balance that must be adhered to. Considering the current environment, safety and security must be at the forefront, yet not a hindrance.

Each town, community, and school district is unique. In order to obtain a full understanding of their requirements, TSG met with administrative staff, Dr. Roxane Howe, Mr. Rick Underwood, custodial staff, and various members of the LHS security team to discuss security system requirements, current standards, daily operations, policies and procedures, as well as successes, challenges and potential deficiencies with the current facilities. Our interaction with custodial and security staff was very informative but informal and the names of the individuals we met with were not documented. The results and key findings are incorporated in this evaluation.

Existing Conditions

This evaluation includes the Kouloheras and Lord Buildings (including bridges between these two), the Freshman Academy, Field House and Steam Plant. Most of the individual building data we received pertained to the Kouloheras, Lord and Freshman Academy buildings, however through interviews with various stakeholders, we were able to obtain additional information regarding the Field House and the Steam Plant. Our findings are broad based (covering all buildings), with many recommendations that apply to the entire campus, but in some cases are building specific. The evaluation has been broken out into the following security related areas; Access Control System (ACS), Video Management System (VMS), Intrusion Detection System (IDS), Communications (COMMS), Duress, Visitor Management, Staffing and Other (which includes integration of systems, locks and door hardware as well life safety code issues and implications).

Access Control System (ACS)

Controlling the who, when and where in a school setting poses a number of challenges both in design concepts and operations. With day and evening programs, weekend events, changing entry locations based on time or event, utilizing the tools and features of the school's ACS is necessary to control access to the school for those individuals with a specific need or authority to be in the facility at specific times.

Using card readers, electrified locks and individualized access credentials provide the ability to selectively grant access based on person, door, time of day, day of week, etc., while storing an audit trail of door and credential use. Locks and keys have their place used for specific areas and purposes, but rekeying of doors due to lost brass keys is costly and time consuming, opening the school to potential risks. Electronic access control, although a capital expense to install, minimizes risk and vulnerabilities. Traditionally maintenance costs are low and predictable; the highest maintenance cost component is the electrified locking hardware. Lost or stolen credentials can be immediately deactivated and any attempted use is recorded. Automation, dynamic override control, door monitoring and most significantly integration to other systems (video recording and event alert systems) are areas LHS needs to better exploit.

Existing Conditions: The ACS is fairly extensive, with card readers on several perimeter and a select few interior doors of all buildings, with the exception of the Steam Plant. Main entrances are programmed to automatically unlock at 7:00 AM and relock at 8:10 AM during school arrival and dismissal times. To manually override timed openings, an administrator needs to access the ACS client software which requires a certain level of proficiency and is time consuming.

> ***Recommendation:*** Lock Down Buttons should be installed in the Main and House Offices. These buttons would override any perimeter doors that are in a timed (programmed) unlock mode during an emergency. These buttons would minimize the time from notification to a building secure mode. They would also eliminate the need for system proficiency in an emergency.
>
> **Estimated Cost:** $ 2,000
> **Future Investment**

Card readers and electrified locking hardware are installed on the following doors (broken out by building using door numbers as shown on BeSafe drawings):

Lord Building - (7) total; all exterior

- Door 1 – Main Entry Front (left double door of three (3) sets of double doors); this door is always in the unlocked mode during school hours as it is the main visitor entrance and is within view of the security desk
- Door 3 – Entry door (single double door) on Father Morissette Blvd on right side of cafeteria; this door is always locked
- Door 4 - Entry door (single double door) on Father Morissette Blvd on left side of cafeteria; this door is unlocked between 6:10 AM - 8:00 AM through the ACS, but locked at all other times
- Door 5 – Entry door (left double door of two (2) sets of double doors) on canal side next to Lowell PD School Resource Office; this door is always locked
- Door 7 – Kitchen entrance from loading dock (single double door); this door is always locked but at time of review was propped open for ventilation within the kitchen
- Door 10 – Loading dock door to Maintenance (single double door); this door was in the locked mode at the time of our review, but the inactive leaf throw bolts were disabled to allow the door to be pulled open
- Door 11 - Main Entry Rear (right double door of three (3) sets of double doors); this door is always in the locked mode during school hours

Recommendation: Door 10 should not be left unlocked (by disabling the inactive leaf throw bolts), but should be controlled through the card reader or remote release capabilities provided through the audio/video intercom system (see COMMS section for additional details).

Estimated Cost: $ 0
Immediate Action

Field House - (4) total; (2 exterior, 2 interior)

- Door 13 – Pool level exterior entry (single double door) on Girls Locker Room side
- Door # not listed on BeSafe drawing - Pool interior entry (single double door) on Girls Locker Room side
- Door # not listed on BeSafe drawing - Pool interior entry (single double door) on Boys Locker Room side
- Door 16 – Pool level exterior entry (single double door) on Boys Locker Room side; primary pool event entrance door

Kouloheras Building - (4) total; all exterior

- Door 2 – Kirk Street entry (single double door); closest to French Street
- Door 3 - Kirk Street entry (single double door); middle Kirk Street entrance
- Door 4 – Kirk Street entry (single double door); Café entrance
- Door 9 – Canal side entry (single double door); closest to French Street

Recommendation: Door 1 is the primary and ADA entrance for the Auditorium for evening events. There is no card access or electrified hardware on any of the doors. One (1) set of double doors should have a card reader package with electrified hardware installed.

Estimated Cost: $ 5,000
Immediate Action (Base Repair)

Freshman Academy Building - (3) total; all exterior

- Door 1 – Paige Street entry (single double door)
- Door 3 French Street entry (single double door)
- Door 5 – John Street entry (single double door)

The ACS is underutilized for monitoring, event linking, annunciation and notification capabilities (integration to VMS, IDS and COMMS). Interviews with stakeholders and a review of supplied as-built documentation indicate that the infrastructure to monitor all perimeter doors was included during recent system renovations in 2014, but integration capabilities are unclear. According to security staff, perimeter doors that are held open for longer than 30 seconds create an alarm, but do not initiate a video event linking a camera to the individual door within its field of view. It could not be determined if the 30 second delay from a held or propped open door is a programming function within the ACS or in the IDS.

> ***Recommendation:*** If the door contacts are tied strictly to the IDS, which uses a coded keypad system for annunciation (i.e. code 3 signifies Custodian Entrance Door) but has no client monitoring screen or other integration linking capabilities, Output Boards should be added to the IDS and Input Boards should be added to the ACS to fully link the two systems and allow the integral software linking to the VMS for true integration.
>
> ***Estimated Cost:*** $ 10,000
> **Future Investment**

All perimeter doors with the exception of one steel roll-up door located at the Main Entrance to the Lord Building (in the cluster of three (3) double doors and the one (1) roll-up door identified as Door #1 on the BeSafe, 1st Floor drawing) are contacted; magnetic switches are installed on each door to indicate whether the door is in the open or closed position. The roll-up grate is used for deliveries, but at the time of our review was open to allow for air circulation in the lobby area. It is a manually operated (chain driven) door. The security check in desk is located just inside and adjacent to this roll-up grate.

> ***Recommendation:*** The roll-up door should have an industrial style contact installed to ensure that it can be monitored in the same manner as all other perimeter doors.
>
> ***Estimated Cost:*** $ 500
> **Immediate Action (Base Repair)**
>
> ***Recommendation:*** The roll-up door should have a power operator installed that would automate the opening and closing of the door, and allow the door to be tied into the previously recommended Lock Down Buttons.
>
> ***Estimated Cost:*** $1,500
> **Future Investment**

Perimeter doors should be classified as one of the following; a card reader door, an exit door or an emergency exit door. Each classification would require specific equipment so that unauthorized use of the door (entering a card reader door without a credential, entering through an exit door or opening an emergency door) would be logged in the system audit trail, linked to a camera's stored video, and annunciated through multiple notification means (ACS monitoring screen, video monitor, multimedia

devices). Exit doors should be equipped with Request-to-Exit devices to reduce alarms when individuals are leaving the building, otherwise each time someone leaves, a nuisance alarm is generated.

> ***Recommendation:*** Each perimeter doorway that is not equipped with a card access package, and is legally used to exit the building should be equipped with a Request-to-Exit motion detector; twenty-five (25) doorways (either single or double doors) meet this criterion between all buildings. One (1) Request-to-Exit motion detector would be required for each doorway.
>
> ***Estimated Cost:*** $12,500
> **Future Investment**

Administrators stated that between the changeover of school and vendor personnel, many features and functions of the system are unknown or not used due to lack of procedural training.

> ***Recommendation:*** Training sessions should be scheduled with the service provider for multiple levels of training. Initially, administrator and user training sessions should be provided to ensure the stakeholders understand the system capabilities and dynamic control options. Refresher and expanded training should be offered as users gain proficiency.
>
> ***Estimated Cost:*** $5,000
> **Future Investment**

There are (32) perimeter entryways between the Lord, Field House, Kouloheras, and Freshman Academy buildings (that number represents locations, some locations have multiple doors). Eighteen perimeter doors are equipped with card reader packages (as detailed above, by building). The only building not equipped with card readers is the Steam Plant.

> ***Recommendation:*** In that the Steam Plant is critical infrastructure, its primary entrances should be equipped with card reader packages.
>
> ***Estimated Cost:*** $5,000
> **Immediate Action (Base Repair)**

Video Management System (VMS)

A VMS provides high-resolution recording and storage, and provides a user friendly Graphical User Interface (GUI) via client software both within the school and remotely. Cameras provide both real-time and post-event (forensic) situational awareness and evidence. Camera positioning may provide a deterrence factor, but more importantly, the positioning is critical to capturing general activity and identifying individuals.

Existing Conditions: The VMS and components for the most part are in good working condition and provide a functional system that allows for fairly extensive coverage of the campus. There are specific areas of concern stated by stakeholders and identified through our review which are detailed below that should receive additional coverage, but the primary concern is ownership and control of the system. Currently, there is no one dedicated to overseeing the VMS and no policy/schedule on ownership or maintenance review.

Recommendation: An individual or department should be selected to perform the function of System Owner/Administrator. The System Administrator's duties should include writing policies on system use, maintenance and operation. Additionally, the System Administrator should be responsible for maintaining system documentation, corresponding with the various stakeholders throughout the school as well as with the service provider. Additionally, the responsibility for reviewing equipment on a daily/weekly basis, and submitting repair requests to the service company needs to be clearly delineated (this task was previously performed by an administrator who is no longer within the school system).

Estimated Cost: $0
Immediate Action

When components fail, a clear path of reporting is required to ensure the system and all components continue to function at an optimal level.

Recommendation: A daily review needs to be performed and any issues reported to the System Administrator who, in turn would contact the service provider. The date and time of the call needs to be recorded and a follow-up should be scheduled to ensure the work is performed in a timely manner (response times should be clearly outlined in the service provider's contract). At this time, the policy is to upgrade analog cameras as they fail. If a one-time capital expenditure for upgrading all cameras to IP technology is not feasible, a multi-year plan and budget should be developed to cover the upgrade costs.

Estimated Cost: $0
Immediate Action

LHS has gone through some changes with its VMS in terms of vendors. They are currently using American Alarm as their security service provider to perform maintenance, installation and to provide training. The present policy requires that the security system maintenance contract is put out to bid annually.

Recommendation: The policy that requires annual bidding on a security system maintenance and service contract creates issues with system continuity, documentation and reliability of the equipment. Each time a new vendor is selected, that vendor needs to learn the systems and components, school work policies for contractors, and the stakeholders within the school and in each individual building with whom they will have interactions. It is recommended that at a minimum, contracts should be for a duration of three (3) years to ensure each contractor has the ability to gain full knowledge of the equipment, infrastructure and personnel involved.

Estimated Cost: $0
Immediate Action

Recommendation: Training sessions should be scheduled with the service provider for multiple levels of training. Initially, administrator and user training sessions should be provided to ensure the stakeholders understand the system capabilities and dynamic control options. Refresher and expanded training should be offered as users gain proficiency.

Estimated Cost: $0

Immediate Action

In the past year to 18 months (project was completed in 2015), the Digital Video Recording System ("DVR") was converted to a Network Video Recording System ("NVR"). The NVR system utilizes the school's network infrastructure (existing network cabling and distributed network switches) to route video data from IP cameras to the recorder/server (as opposed to individual cables from analog cameras to the DVR), which allows for quicker deployment of new cameras, reducing labor intensive cabling. As analog cameras become non-functional, they are replaced with IP cameras but there is no set plan or budget for full replacement.

Existing cabling is a combination of coaxial and unshielded twisted pair cabling (per Camera Inventory Spreadsheet dated 2011-2012); it cannot be determined from the data provided nor from those interviewed which cameras are analog and which are IP technology. It is also not known if those cameras that were upgraded in the past year to 18 months utilized new CAT5 or CAT6 cabling without a far more in depth investigation which would require the assistance of American Alarm (the contracted service company), and/or the school IT department. It may be that media converters were used to utilize the existing cabling.

Recommendation: All cameras should have either CAT5 or CAT6 (preferred) cable directly from the camera to a PoE network switch. The switch needs to be within 100 meters of the camera. It is unclear if the recent camera upgrade to IP entailed recabling or media converters were added to utilize existing Coax or UTP cabling. It is recommended that a CAT6 cable be pulled to each camera, including any legacy analog cameras so that eventual replacement can be accomplished with minimal labor and down time.

Estimated Cost: Unknown, will require an in-depth review of cabling infrastructure
Immediate Action (Base Repair)

The current system suffers from maintenance issues:

- (12) cameras with video loss
- (2) PTZ cameras that cannot be repositioned
- (2) of the (5) 36" video monitors located in the Security Office were non-functional.

Recommendation: The present contract with American Alarm includes $35,000 for maintenance, repair parts and training. Policies and procedures need to be in place to review camera operations on a daily basis to ensure maintenance is done in a timely manner. Daily logs need to be kept that notate equipment failures, who was alerted and when repairs were completed. The non-functioning equipment listed above should be immediately repaired or replaced if this maintenance has not already occurred.

Estimated Cost: $0
Immediate Action

Floor plans of each building (with the exception of the Field House and Steam Plant) were provided that document camera locations, and include a total camera tally per building and per floor. The floor plans show icons to indicate camera locations, but do not indicate the individual camera fields of view.

Quantity of cameras by building are as follows:

Lord Building - (35) total, broken out as *(28) Fixed Position and (7) Pan, Tilt, Zoom ("PTZ")

- 1st Floor – (7) Fixed (all interior), (6) PTZ (2 interior, 4 exterior)
- 2nd Floor – (9) Fixed (all interior), (1) PTZ (interior)
- 3rd Floor – (5) Fixed (all interior)

* Total quantity of fixed cameras detailed on floor plan does not match individual floor quantities detailed on same plan (7 Fixed Position cameras cannot be accounted for on the floor plans of the 28 total listed for the building). The icons shown on the individual floors match the numbers listed by floor. There are two icons shown on the 1st Floor in the cafeteria that may be cameras, but do not follow the standard icon symbol and are not numbered as are all other camera icons.

Kouloheras Building – (57) total, broken out as (53) Fixed Position and (4) PTZ

- Basement – (12) Fixed (all interior)
- 1st Floor – (20) Fixed (18 interior, 2 exterior), (4) PTZ (all exterior)
- 2nd Floor – (12) Fixed (all interior)
- 3rd Floor – (9) Fixed (all interior)

Freshman Academy - (31) total, broken out as (28) Fixed Position and (3) Pan, Tilt, Zoom (PTZ)

- Basement – (9) Fixed (6 interior, 3 exterior), (3) PTZ (1 interior, 2 exterior)
- 1st Floor – (6) Fixed (all interior)
- 2nd Floor – (9) Fixed (all interior)

It may be due to the fact that at this time no one individual or department is charged with system ownership (System Administrator), but the documentation available showing system as-built conditions was minimal and not up to date. For any electronic system, but especially one as complex as the video management system that encompasses four (4) buildings and is critical to the security of approximately 4,000 students and staff, as-built documentation and other equipment records are critical to maintaining an operational system.

Recommendation: All work on the system (replacements, add on components or infrastructure changes), should be fully documented and in formats that can be easily transferred to a new vendor should the need arise. Floor plans we reviewed were in Microsoft Word documents; camera quantities listed on the document did not match those shown on the floor plan. As-built drawings should be required to be submitted to the school in AutoCAD DWG format, and only distributed in PDF format to ensure document integrity. Each component should be included in an inventory spreadsheet that includes: make, model, location, date installed, date last serviced and out of warranty date. These documents should be developed by the servicing/installing company, updated each time work is performed on the system, and provided to the System Administrator at the completion of any work performed on the system.

Estimated Cost: $0
Immediate Action

Security personnel stated that camera coverage for the most part is good, but indicated a few areas they would like additional coverage which include:

- Hallways (in long corridors some areas blocked off by in-corridor fire doors)
- House Office areas (both interior to the office and in the corridors outside each office)

- Corridors outside of Nursing Station areas
- Gymnasium and Pool
- Interior of Freshman Building alley door (internal stairwell splits and wraps around elevator shaft and only one side of the split stairwell is covered by a camera, creating an uncovered entry/exit path)

Recommendation: Areas identified that need additional camera coverage should be included in the design budget; Main and House Offices (both internal to the office viewing the public side of the counter and the corridor approaches to the office); corridor approaches to the Nurse Stations; additional corridor cameras throughout the buildings where mid-corridor fire doors obscure existing camera views (there were approximately a dozen locations identified by security staff); the interior of the Freshman Academy ally door (entry stairwell splits into two paths of entry/egress around an elevator shaft and only one path is presently covered).

Estimated Cost: $ 20,000
Future Investment

There are no cameras in the gymnasium. It was stated by security staff that due to the fact that the gym is used for instructional purposes, cameras were not allowed (TSG could find no instance of Massachusetts code or law stating that instructional areas could not be viewed or recorded). Although the gym is used for instruction during normal school hours, it is also used to host other functions and at times hosts several hundred visitors.

Recommendation: It is recommended that cameras are added to the gymnasium to view all entry/exit doors, bleachers and playing surfaces. The VMS system is capable of being programmed to record on a schedule so any legal or union issues regarding instructional time recording can be avoided.

Estimated Cost: $ 10,000
Future Investment

Not all perimeter doors or windows are within view of cameras.

Recommendation: It is recommended that additional exterior cameras are added to see the entire perimeters of all buildings, including the Steam Plant and Field House. Perimeter cameras should provide a view of all ground/street level accessible openings (doors and windows). Fixed position cameras are recommended; PTZ cameras provide good supplemental coverage, but not primary coverage due to the fact that they can be repositioned.

Estimated Cost: $ 40,000
Future Investment

The security office located in the Lord Building where the VMS is housed is a large room, which provides the proper environment for viewing video. However, there is no air conditioning which can lead to overheating (uncomfortable for staff and detrimental to longevity of equipment). The video wall allows for easy viewing, but there are currently multiple monitors that are not functioning.

Recommendation: The security office should be supplemented with environmental controls to preserve the integrity and operation of critical equipment and for the comfort of staff.

Estimated Cost: **$ 10,000**
Immediate Action (Base Repair)

Communications Systems (COMMS)

Communications Systems provide the ability to provide real-time information and instructions to all students, staff and visitors. Communications Systems, in addition to day to day operations also serve the purpose of being a Mass Notification System ("MNS") in the event of an emergency situation. During an emergency, the various components of the Communications Systems are critical to providing instructions, coordinating staff and first responders, and accounting for all individuals within the school campus area. Communications Systems at LHS include several subsystems under the communications heading. Many of these systems are old, have operational issues and in many instances are non-functional and need to be replaced or significantly enhanced. The subsystems included under the Communications Systems heading include:

- Public Address System ("PAS")
- Phone Systems (standard phone system as well as in-school, point-to-point phones)
- Radio System
- Intercom/Door Entry Systems

The PAS should have the ability to alert all areas of the campus, including both interior and exterior areas. Individuals located on school grounds but not inside the school may need to be notified of an event in progress such as a fire alarm or other non-fire related emergency.

Existing Conditions: The current PAS system is antiquated and vendors are having trouble making repairs. Many classrooms do not have access to the speakers and therefore do not receive messages, and there are no outdoors speakers. Each Office (4 House and the Main office) can all make announcements; announcements cannot be made from any other location. The Freshman Academy can hear announcements made from the Lord Building but the Lord Building cannot hear announcements made from the Freshman Academy.

Recommendation: A functional PAS is a priority concern and shall require extensive work throughout the entire campus. The PAS, in addition to the functionality provided for daily operation, is the primary MNS component of all the COMM subsystems. Due to age and issues related to finding replacement components, it is recommended that the entire PAS be replaced. LHS should upgrade the PAS, inclusive of: infrastructure (wiring, power supplies and amplifiers), speakers in each classroom as well as in corridors, assembly areas (cafeteria and auditorium), Field House (gymnasium, pool and locker rooms), and outdoor areas to ensure complete coverage in/around all buildings on the campus. The PAS system should also work interchangeably between all buildings, allowing emergency announcements to be made from each building and be heard throughout the campus, regardless of the origin of the announcement. The system should also allow for selective, segmented announcements for non-emergency situations (i.e. individual buildings or areas such as the pool, gymnasium and auditorium). In newer technology systems the capability exists to integrate in-school IP phone

systems to the PAS to enable public announcements to be made from anywhere within the school in the event of an emergency. This optional capability should be explored for cost implications during the design phase of any new system.

Estimated Cost: $ 500,000
Immediate Action (Base Repair – End of Life Product)

One additional concern with the PAS is that it cannot be operated during a fire alarm event. Perkins Eastman research did identify this restriction within Life Safety Code requirements.

Recommendation: The ability to operate the PAS during a fire alarm event should be available to administrators unless prohibited by code. This should be resolved as soon as possible to ensure the necessary command and control capabilities are available to administrators.

Estimated Cost: Included in previous estimated cost

Classroom phones are not reliable in terms of functionality. Specifically, several phones are fully non-functional whiles others provide only one-way communication.

Recommendation: LHS should upgrade the in-school phone system to ensure all classrooms, offices, and other applicable spaces have a functional phone that can receive calls from the House and Main Offices as well as place calls to the various support group offices including: Security, School Resource Officer(s), Nursing Stations and Custodial. An IP phone system should be considered to minimize cabling labor and best utilize infrastructure and technology advancements.

Estimated Cost: $ 100,000
Immediate Action (Base Repair – End of Life Product)

LHS has approximately fifty (50) radios deployed to administrative and custodial staff, in house security personnel and Lowell Police Department School Resource Officers. Administrative staff feel the quantity of radios is insufficient; that they would like additional radios for disbursement to faculty in specific areas of the building. The capabilities of the existing radios are not adequate for emergency notification and command/control for a school the size of LHS, with its multiple buildings and a student/staff population of approximately 4,000. The single channel capability of fifty (50) active radios during an emergency event would be confusing and extremely difficult to ensure clear communication of directives by the various authorities among the user groups. Additionally, there are areas within the campus that have poor or no radio reception, possibly due to interference, the age and construction of the buildings and the equipment/infrastructure in use.

Recommendation: LHS should upgrade the present radio system to include multiple channels to allow specific groups to communicate simultaneously during an emergency, as well as purchasing additional radios so each classroom or geographic groups of classrooms have a fully functional radio as a backup communication system in the event of an emergency.

Estimated Cost: $ 250,000
Future Investment

There are several exterior door Audio/Video Intercom Systems located at exterior doors, mostly for visitor or student entry when doors are in the locked mode, but one used for the in-school restaurant. Doors equipped with audio/video intercom stations include (by building and location):

Lord Building – (2) location; both report to Security Desk in main lobby
- Door 3 – Father Morissette Blvd entrance to right of cafeteria
- Door 10 – Loading dock entrance to Maintenance

Field House – (0); none required

Kouloheras Building – (1); reports to Café
- Door 4 – Café entrance

Freshman Academy – (2); both report to Main Office
- Door 1 – Paige Street main entrance
- Door 3 – French Street entrance

Recommendation: The video/intercom located at the Lord Building loading dock is not utilized during normal school hours. The door is left unlocked (see comments in ACS section) because of the continuous use of the door throughout the day. Leaving this door unlocked and unattended could create a serious breach of the building's perimeter. This video/intercom should be used to control this door (the system has an integral unlock button that is tied to the ACS.

Estimated Cost: $ 0
Immediate Action

Recommendation: All video/intercom door stations should be integrated with the VMS (to keep video data of who requested entry with a time/date stamp).

Estimated Cost: $ 2,000
Future Investment

Intrusion Detection (IDS)

An intrusion detection system provides a means to have the building secured and monitored remotely. Door contacts and motion detectors (as well as other detection devices) are terminated to a control panel that reports alerts to a remote Central Station, who in turn contacts police, roving security and school staff.

Existing Conditions: The present IDS consists of perimeter door contacts and motion detectors in corridors throughout the buildings. Each building can be armed/disarmed through an IDS Keypad.

Recommendation: Similar to the comments made regarding perimeter door monitoring (in ACS section), perimeter doors that are part of the IDS should report to the ACS which has greater capabilities for programming and user interface (i.e. monitoring capabilities and shunt time changes due to events) ACS to the IDS would allow both systems to simultaneously monitor perimeter doors and programming of the ACS outputs should be set to allow only after hour alarms to be reported to the Central Station. The integration between the two systems would

allow for local monitoring (in-house security and multi-media alerts to administrators) of all doors during hours the buildings are occupied, and off-site (Central Station) monitoring when the buildings are unoccupied.

Estimated Cost: Cost captured in ACS section

There is presently no set schedule for testing the IDS.

Recommendation: A policy and procedure should be instituted to test the IDS on a monthly (or quarterly) basis to ensure all components function properly. Testing should include transmitting alarms through to the Central Station to validate the digital dialer and phone line integrity.

Estimated Cost: $ 0 (if using existing security and custodial staff)
Immediate Action

Duress Buttons

Duress Buttons provide a means of notifying school administrative staff and police of a situation that requires an immediate response. Duress buttons can report to the ACS and IDS to ensure notification (on screen, text message and remote Central Station).

Existing Conditions*:* There are no duress buttons presently installed or in use. School administrators, Security Staff and School Resource Officers are at times dealing with agitated students and/or parents.

Recommendation: Duress Buttons should be installed in the Main Office and all House Offices. It is recommended that (2) buttons be installed in each of these locations to ensure that someone within the space would be able to activate the button without being seen by the individual causing concern. Additionally, Duress Buttons should be installed in Nursing Stations, the School Resource Office (where interviews may take place), and in Guidance Offices (where one on one counselling occurs).

Estimated Cost: $ 5,000
Future Investment

School administrators have looked into *COPsync911* software to allow rapid alerts to be sent to the Lowell Police Department. This is a third party software system that allows a staff member to click a link that is sent to the police. The system opens up a two-way communication link between the school and first responders to ensure that responders know the status of the situation and what resources are needed in their response.

Recommendation: It is recommended that this or a similar system is purchased and client software installed in the Main Office and all House Offices. Additionally, Security Staff and School Resource Officers should have access to the system to ensure all are aware of ongoing situations within the school to ensure the fastest, most informed response.

Estimated Cost: Cost unknown
Future Investment

Visitor Management

Visitor Management encompasses both physical control (who is allowed in the buildings) and identification of visitors (badges worn by visitors during normal school hours). There are many challenges involved in the control of visitors in a school setting, especially with the diverse programs, times and locations of events. Visitors range from parents, contractors, visiting teams, night students and a variety of others.

Existing Conditions: Security staffs the visitor entrance at Door#1 of the Lord Building from 7:00 AM to 11:00 PM. At the security desk, they operate a visitor badging system (Raptor) that records the visitor's name, purpose of their visit and who they are to meet with (if applicable). The Raptor system produces a paper badge that the visitor is to wear within the building. They like the system and it works well.

Concerns voiced by both Security and Administrative Staff are in regard to the entry configuration. The security desk is to the right entering the Lord Building in a large open foyer area. The door that visitors enter (one of three sets of double doors) is the furthest from the desk. That door is equipped with a card reader and electrified locking hardware. During high volume times, several individuals may enter and the security staff have a hard time watching to ensure that each visitor reports to the desk, is signed in and receives a badge. Only a few steps from the entry door in the opposite direction from the security desk is the elevator alcove (out of site of the desk) and central Lord Building corridors with access to stairs.

> ***Recommendation:*** Use of the furthest door should be reserved for those staff members with card access credentials. Electronic locking hardware should be installed on the door closest to the security desk and that door should be reserved for visitor use. Some means of partitioning should be used to ensure once a visitor enters, they cannot bypass the security check-in (i.e. a velvet rope and station system).
>
> ***Estimated Cost:*** $ 3,000
> **Future Investment**

When the gymnasium in the Field House is used for sporting events, the main entrance to the Lord Building by the security desk is the primary visitor entrance. When swim meets occur, the primary entrance is Door #16 on the rear of the Field House. This door also leads to the locker room area of the Field House.

> ***Recommendation:*** It is recommended that a temporary security desk be set up and used for Door #16 during swim meets to screen visitors.
>
> ***Estimated Cost:*** $ 0 (staffing costs would be related to frequency of event)

Due to building and life safety code issues, corridors and stairwells cannot be blocked off during after school events. This is a problem in that there are many after school activities (sports, music programs, tutoring, adult evening classes, etc.), where people have access to move through the buildings. Staff members are used where possible during events to ensure the public does not have free roam, but the problems can't be stopped with the many pathways available.

Recommendation: Additional corridor cameras were previously recommended (VMS Section), that will assist in stopping unauthorized movement within the buildings. All stairwells and elevators should be covered and specific multiplexed VMS views (grouping cameras showing these pathways) should be established to provide enhanced monitoring capabilities to the Security Staff.

Estimated Cost: Costs captured in VMS section

Delivery drivers sometimes enter the building (loading dock at rear of the Lord Building) without signing in.

Recommendation: TSG previously recommended the utilization of the existing audio/video intercom (in the COMMS Section). Controlling this door with the existing card reader and the video/intercom system would minimize the potential of any unauthorized or unrecorded individuals entering the building.

Estimated Cost: $ 0
Immediate Action

Staffing

Security related staffing concerns involve school administrators, custodial staff, faculty, security personnel and police. Each group has duties and responsibilities that, in combination, provide the backbone of school security.

Existing Conditions: LHS is well staffed in regards to security. In addition to administrative, custodial and faculty staff, the school employs an internal security force and has School Resource Officers from the Lowell Police Department.

Administrative staff have the responsibility of maintaining systems in proper operating condition, as well as ensuring all staff members who interact with the electronic systems are thoroughly trained. At this time, there is not a true system administrator to handle these duties.

Recommendation: As previously recommended in the ACS and VMS sections, either an individual or a department should be assigned the duty of system administrator. That position should be responsible for policies and procedures to ensure all is equipment is functional and all personnel are trained.

Estimated Cost: $ 0
Immediate Action

Custodial staff control the locking and unlocking of the buildings on a daily basis and are always in the school when any function occurs. Custodians arm the IDS at the end of the day and disarm it first thing in the morning. Custodial staff are in the buildings from 6:00 AM to 11:00 PM. There is a primary and at times a secondary custodian in each building.

Security Staff have multiple shifts to deal with school operations:

- 6:00 AM - 2:15 PM (1) staff member

- 7:00 AM – 3:00 PM (6) staff members
- 3:00 PM – 11:00 PM (1) staff member

Security Staff are located at various locations throughout the day:

- (1) staff member at security desk in Lord Building lobby
- (1) floater at all times for each building
- Security monitoring room staffed at most times during the day, but there are times when no one is available due to other duties

Recommendation: Due to the fact that the security monitoring room is equipped with several large screen monitors that would be essential command and control equipment in the event of an emergency situation, it is recommended that this room be staffed at all times.

Estimated Cost: $ 0
Immediate Action

Other

There were a few comments or concerns that did not fall under the previously discussed categories. We have included them under the Other heading to ensure they were captured within the report.

Existing Condition: TSG reviewed a small sample of classroom door hardware for lockdown capability. Those doors reviewed have knob set lock bodies with a push button on the interior to activate the lock. This style lock is well suited for a classroom in that the door can be locked from inside the room (as opposed to a lockset that requires a key from the outside), in the event of a school lock down situation. One concern noticed was that doors that interconnect two classrooms had the same lockset, securing only one room of the two.

Recommendation: A code review should be performed to understand the significance of the second (connecting) door in regards to room capacity and egress. If the connecting door is a required egress path from both rooms, the existing knob set needs to be changed to a passage set (latchbolt is always retracted by the lever from either side), allowing free travel in both directions (no locking capabilities). If the connecting door is not a required egress path, the hardware should be changed to either an institutional lockset (the latchbolt is retracted by a key on either side), or a passage set with a deadbolt that is keyed on both sides.

Estimated Cost: $ 300/door
Immediate Action (Base Repair)

Recommendation: All classrooms and offices should have the ability for the door to be locked from the inside.
Estimated Cost: $ 300/door
Immediate Action (Base Repair)

In reviewing the *Lowell High School Code Report_2016-09-16*, a few items listed have significant impact on security. There were perimeter and stairwell doors without functioning mechanical door closures.

Recommendation: Door closures are a key security component and need to be repaired or replaced to ensure the integrity of the building perimeter.

Estimated Cost: $ 500/door
Immediate Action (Base Repair)

Also noted in the *Lowell High School Code Report_2016-09-16*, was the fact that stairwells were used for storage. In addition to the code issue (blocking a means of egress), the items stored could contribute to injuries, the area could be used to hide objects and it increases the potential for theft.

Recommendation: No storage should be allowed in a publically accessible area.

Estimated Cost: $ 0
Immediate Action

LOWELL HIGH SCHOOL
Lowell, Massachusetts

Existing Conditions Evaluation / Base Repair Structural Report
October 21, 2016
PE Project #67150.00

INTRODUCTION

Foley Buhl Roberts & Associates, Inc. (FBRA) is collaborating with *Perkins Eastman (PE)* and their consultants in the review and evaluation of structural issues/conditions at the Lowell High School in Lowell, MA. The purpose of this report is to identify and describe the structural systems of the various buildings and to comment on the structural issues/conditions observed. Recommended repairs to the subject buildings are also identified. Potential Renovation/Addition and New Construction options will be addressed in a future, separate narrative; however, general comments are provided at the end of this report.

Structural conditions at the Lowell High School were reviewed at the site on August 26, 2016 and on September 8, 2016. FBRA also conducted site reviews of Lowell High School buildings in July 2013, as part of the Comprehensive Facilities Assessment | Master Plan Report prepared for the Lowell Public Schools District.

No exploratory demolition or structural materials testing were performed in conducting this study. No subsurface soils information or geotechnical studies/reports were available.

Refer to the Existing Conditions/Base Repair reports prepared by PE and the other consultants for further information. Code related issues are addressed in the *Existing Conditions Code Report* prepared by the Sullivan Code Group of R. W. Sullivan Engineering, dated September 16, 2016. Gross floor areas noted in this report were obtained from 2013 *Comprehensive Facilities Assessment* and are subject to confirmation.

GENERAL OVERVIEW

The Lowell High School is comprised of four main buildings (Kouloheras, Lord/Fieldhouse, the Freshman Academy and the Steam Plant), located along Father Morissette Boulevard/French Street in Lowell. The Lord building is the only building on the campus located on the west side of the Merrimack Canal. It is connected to the Kouloheras building by two enclosed pedestrian bridges, spanning over the canal between the buildings at their Second Floor levels. The Freshman Academy (originally the Lowell Trade School) and Steam Plant buildings are located on the east side of the High School's campus, one block over from the Kouloheras building. Separate descriptions of each building are provided below.

I. KOULOHERAS BUILDING

Structural conditions at the Kouloheras Building were reviewed at the site on August 26, 2016 and September 8, 2016.

The following documents for this building were reviewed in the preparation of this report:

Addition to the Lowell High School: Henry L. Rourke Architect; Various HVAC and Electrical Drawings, prepared by Richard D. Kimball Co. Engineers, undated (Circa 1917).

Alterations to Coburn Hall: Structural Drawing S1, prepared by James E. MacDonald Assoc., Inc., dated February 15, 1980.

Alterations to Coburn Hall: Architectural Drawings A1 to A11, prepared by Paul L. Davies & Associates/William J. Gavin & Associates, dated February 15, 1980.

Improvements to Lowell High School: Structural Drawings S-1 and S-2, prepared by Andrew S. Pike & Associates, dated July 11, 1983.

Improvements to Lowell High School: Architectural Drawings A-1 to A-7, prepared by Davies & Gavin, Architects, Inc., dated July 22, 1983.

Lowell High School Renovations – Task 1: Structural Drawings S001 to S504 and Architectural Drawings A101 to A03, prepared by Sverdrup Facilities Inc., dated December 11, 1995.

Lowell High School Renovations – Task 2: Structural Drawings S001 to S512 and Architectural Drawings A001 to A811, prepared by Sverdrup Facilities Inc., dated December 11, 1995.

Lowell Public Schools - Comprehensive Facilities Assessment: Master Plan Report and Existing Conditions Documentation, prepared by OMR Architects, dated July 2013.

Original Structural and Architectural Drawings were not available for the 1892 and 1922 sections of the building at the time of this report. The descriptions of Structural and Architectural systems provided within this report for these sections were derived from observations on site or obtained from the renovation and alteration drawings listed above.

A. General Description

The Kouloheras Building consists of the three main parts: the original Coburn Hall Building, constructed in 1892, a significant classroom/Auditorium addition, constructed on the north side of Coburn Hall in 1922, and the smaller, 1995 addition to the north end of the 1922 building. The 1995 addition is separated from the 1922 building at each level by an expansion joint. The three-story Kouloheras Building has a full basement and is located on the east side of the Merrimack Canal, which separates it from the Lord Building. The total, gross floor area of the building is approximately 322,000 square feet.

Each level of the building is comprised mainly of classrooms. The Auditorium, a triple-height space, is located on the First Floor at the north end of the 1922 building.

B. Structural Systems Description

General Construction: Pitched roof construction of the original 1892 section of the building is wood framed, supported by steel and wood trusses. The existing wood framing and trusses underwent extensive repairs/reinforcing during the 1995 renovations to the building. The First, Second and Third Floor construction of the 1892 portion of the building consists of tongue and groove wood plank on wood joists spanning to brick masonry bearing walls. The existing wood framing at these levels also underwent extensive repairs/reinforcing during the 1995 renovations to the building.

Due to a lack of existing drawings and the presence of hard finishes which obscure the structure, the flat roof construction of the 1922 portion of the building is largely unknown (with the exception of the Auditorium roof where steel trusses are present). However, our observations and limited original drawings suggest that at least some sections of the building

are reinforced concrete slab construction (concrete slabs with masonry block or tile forms, supported on masonry bearing walls).

Flat roof construction of the 1995 addition is steel framed, with metal deck spanning to steel joists and beams/girders supported by steel columns. The First, Second and Third Floor construction of the 1995 addition consists of concrete slab on metal deck spanning to steel beams supported by steel girders and columns.

Lowest level construction is a concrete slab on grade with a mixture of fieldstone and concrete foundations.

Structural Materials: Structural material strengths for the 1892 and 1922 portions of the building are not available. Material strengths for the 1995 addition and renovation are as follows:

Minimum 28 - Day concrete compressive strength for concrete:
Foundations and Slabs on Grade – 3,000 psi
Flat Work – 4,000 psi

Steel reinforcing is deformed bars conforming to ASTM A615, Grade 60.

Allowable bending stress for Structural Steel:
Rolled Shapes and Plates – ASTM A36 (36,000 psi)
Steel Tubes (Round) – ASTM A500 Grade B (42,000 psi)
Steel Tubes (Rectangular) – ASTM A500 Grade B (46,000 psi)
Steel Pipes – ASTM A53 Grade B (35,000 psi)

Subsurface Soils and Foundations: Subsurface conditions for the 1892 and 1922 portions of the building are not available. Brick and field stone foundation walls in these areas were observed on site. Conventional spread footings for the 1995 addition were proportioned on the basis of a 4.0 tons per square foot (tsf) maximum allowable bearing pressure.

Story Heights: Story heights are as follows:

Basement to First:	13’-3”
First to Second:	13’-6”
Second to Third:	13’-7”
Third to Roof:	21’-3”

Design Live Loads: Design live loads for the 1892 and 1922 portions of the building are not available. Loads for the 1995 addition and renovation are as follows:

Library:	130 psf
Classrooms:	50 psf
Corridors:	100 psf
Stairs:	100 psf
Snow:	30 psf

The building structure appears to have performed satisfactorily over time; there are no indications of structural overstress or failure. A comprehensive investigation and evaluation of the floor and roof structural capacity is beyond the scope of this report. Note that the current code requires a flat roof design snow load (non-drift areas) of 38.5 psf.

Expansion Joints: The 1995 addition is separated from the 1922 building by an expansion joint at each level. No other expansion joints are present within the building.

Roof Construction: Construction of the pitched low roof areas on the east and west ends of the 1892 building consists of 7/8" wood sheathing over 2x10 and 2x8 rafters spaced at 18" on centers and supported by 6x12 purlins. The wood purlins span to wood trusses. During the 1995 renovations, 12" deep steel bar joists were added between existing rafters to reinforce the roof structure at areas susceptible to snow drift loading. Steel members (channels and angles) were also installed to reinforce the existing valley and ridge beams, purlins and wood trusses at that time. An Attic space is present below the low roof areas of the 1892 building. Attic floor construction consists of ¾" plywood sheathing over 2x10 and 2x8 joists spanning to 6x8 beams and/or masonry bearing walls. In 1995, the Attic Floor was reinforced with 12" and 14" deep steel bar joists, installed at 3'-0" on centers between the existing 2x8 and 2x10 wood joists, respectively.

Construction of the high, pitched roof area over the middle portion of the 1892 building consists of 1" wood sheathing spanning to 2x10 rafters spaced at 16" on centers supported by 6x12 purlins. The wood purlins span to steel trusses spaced at approximately 16'-0" on centers. Similar to the low roof structure, steel members were installed to reinforce the existing purlins and steel trusses in 1995. A structural grid for a new suspended ceiling, consisting of steel channels and cold formed metal studs hung from the bottom chords of the existing steel trusses, was also installed at that time.

Roof construction for the 1922 portion of the building is unknown. However, as previously mentioned, a reinforced concrete structure is suspected.

Roof construction of the 1995 addition consists of 1½" deep, 20 gauge metal decking over steel joists spaced at approximately 5'-4" on centers. Steel joists span to wide flange steel girders supported by wide flange steel columns.

Upper Floor Construction: Second and Third Floor construction for the 1892 portion of the building consists of 2-3/4" thick tongue and groove planks spanning to 10x16 wood joists, reinforced with 9" deep steel channels on each side. Floor joists are supported by steel wide flange beams and/or masonry bearing walls. First Floor construction for the 1892 portion of the building consists of 2¾" thick tongue and groove planks spanning to 8x14 wood joists, reinforced with 9" deep steel channels on each side. Joists span to 10x14 wood beams, with 12" deep steel channel reinforcing.

Floor construction for the 1922 portion of the building is unknown. However, as previously mentioned, a reinforced concrete structure is suspected.

First, Second and Third Floor construction of the 1995 addition consists of a 2½" thick concrete topping slab over 2" deep, 20 gauge composite metal floor deck (4½" total slab thickness) spanning to wide flange steel beams spaced at approximately 5'-4" on centers. The steel beams span to wide flange steel girders, which are supported by wide flange steel columns.

Wall Construction: Exterior wall construction for the 1892 portion of the building consists of brick bearing walls, approximately 28" thick. The exterior walls of the 1922 addition are masonry construction as well.

Exterior wall construction for the 1995 addition consists of a light gauge stud backup with brick veneer and punched window units. A continuous relieving angle was provided at each framed level of the 1995 addition.

Interior partitions are typically light gauge metal stud wall construction within the 1995 addition and wood stud walls and/or brick masonry bearing walls within the 1892 building. Partitions in the 1922 addition are typically masonry.

Fire Resistance: Construction types vary throughout the building; ranging from unprotected wood and steel framing (original 1892 building), reinforced concrete construction (1922 addition) and structural steel (1995 addition). Per the previously referenced Code Report, the mix of different construction types in the original building and the 1922 addition results in a minimum of Type IIIB Construction (Combustible interior – no fire-resistance rating; 2 hour noncombustible exterior wall). The 1995 addition is protected steel framing; potentially Type IIIA Construction (1 hour rating). Further evaluation of the existing conditions and construction types permitted by the Code is required to determine what measures may or may not be necessary to address fire rating issues. The Kouloheras Building appears to be fully sprinklered.

Lateral Load Resistance: The lateral load resisting system for the 1995 addition consists of steel braced frames in the north-south direction and steel moment frames in the east-west direction. There is no defined lateral load resisting system in the 1892 building or the 1922 addition; by default, lateral loads are resisted by the (unreinforced) masonry walls.

C. Structural Conditions/Recommended Repairs

Structural Conditions at the Kouloheras Building were reviewed at the site (to the extent possible) on August 26, 2016 and September 8, 2016. Generally speaking, floor and roof construction appear to be in satisfactory condition; there is no evidence of structural distress that would indicate significantly overstressed, deteriorated or failed structural members.

Foundations appear to be performing adequately; there are no signs of significant, total or differential settlements.

Floors and roofs appear to have been constructed in general accordance with the Structural Drawings that were available.

Structural/structurally related conditions observed on site are summarized below; recommended repairs are noted in *italics*:

1. Building Exterior: In general, the existing yellow brick and mortar around the building's exterior are in good condition, with a few exceptions:

    - In a several locations, steel lintels over punched windows are showing signs of distress (lintel is sagging, rust is present, brick above is displaced, etc.); specifically those over the lower level basement windows. *Assume that approximately 10% lintel replacement; the balance of lintels should be cleaned and coated.*
    - There are open joints in the brick and stone in limited areas, were repointing is required. *Assume that less than 10% of the façade area requires repointing.*
    - Concrete spalling/deterioration around the aluminum railing posts at the Auditorium entrance was observed. *Remove and replace the existing railings with properly designed railings and repair the damaged concrete.*
    - Sections of the masonry cornice around the perimeter of the building were damaged or missing in some locations. *Evaluate the condition of the cornice around the building perimeter; repair/reset cornice units as required.*

- Downspouts from roof gutters discharge directly adjacent to the basement walls of the 1892 building. *All downspouts should be properly piped away from the building (to a drainage structure), to eliminate roof rainwater from being discharged adjacent to basement walls.*

2. Roof: The roof was not accessed during the either site visit. However, per the referenced, 2013 Master Plan Report, the pitched roof of the original 1892 building was recently replaced. Per the same report, the roofing over the remainder of the building is in poor condition and likely in need of replacement. Evidence of roof leaks was observed throughout the building. *PE has reviewed the existing roofs; replacement of the flat roofs is required. Drainage issues should be evaluated and addressed as part of the new roof design.*

3. Masonry Partitions: Interior masonry partitions generally appear to be in satisfactory condition. The anchorage/bracing of interior masonry partitions to the floor and roof construction as well of the height-to-thickness ratios will need to be evaluated and addressed (per code) if the building is renovated in the future (or undergoes a voluntary repair). *The preliminary cost estimate should include an allowance to anchor/brace the tops of all (non-structural) interior masonry partitions (approximately 4'-0" o.c. spacing of anchors/braces).*

4. The anchorage of exterior masonry walls to the floor and roof construction will need to be evaluated and addressed (per code) if the building is renovated in the future (or undergoes a voluntary repair). *The preliminary cost estimate should include an allowance to anchor the tops of all exterior masonry walls (approximately 4'-0" o.c. spacing of anchors).*

5. Efflorescence was observed on the north façade of the 1995 addition. *Clean/restore masonry surface in conjunction with future renovations to the building.*

6. Terrazzo flooring has cracked in some areas; elsewhere (tile) flooring has failed (potentially due sub-slab to moisture conditions). *Repair areas of damaged and/or deteriorated flooring as required, in conjunction future renovations to the building.*

7. The railing at the front of the Auditorium Balcony is only 33"+/- high and does not meet current code requirements. *Remove the existing railing and install a new, code compliant railing system.*

Refer to the APPENDIX at the end of this report, for photographs of structural/structural conditions that require repair.

II. LORD BUILDING

Structural conditions at the Lord Building were reviewed at the site on August 26, 2016 and September 8, 2016.

The following documents for this building were reviewed in the preparation of this report:

*Additions to the Lowell High Schoo*l: Structural Drawings S1 to S26 and Architectural Drawings A-01 to A-55, prepared by Lev Zetlin Associates Inc., dated May 26, 1978.

Alterations to the Lowell High School: Structural Drawings SS-1 to SS-5 and Architectural Drawings AA-01 to AA-22, prepared by Lev Zetlin Associates Inc., dated May 26, 1978.

Lowell High School Renovations – Task 1: Structural Drawings S001 to S504 and Architectural Drawings A101 to A403, prepared by Sverdrup Facilities Inc., dated December 11, 1995.

Lowell High School Renovations – Task 2: Structural Drawings S001 to S512 and Architectural Drawings A001 to A811, prepared by Sverdrup Facilities Inc., dated December 11, 1995.

Lowell Public Schools - Comprehensive Facilities Assessment: Master Plan Report and Existing Conditions Documentation, prepared by OMR Architects, dated July 2013.

A. General Description

The Lord Building is a steel and concrete framed building comprised of a three-story Academic Building and a two-story Fieldhouse/Natatorium that are connected by a glazed lobby. The Lord Building, located on the eastern bank of the Merrimack Canal, was constructed in 1980 and underwent minor renovations and an addition in 1995. Two enclosed pedestrian bridges, spanning over the canal, connect the Second Floors of the Lord and Kouloheras Buildings. The two bridges were constructed at different times: the south bridge at the same time as the Lord Building and the north bridge during the 1995 renovations to the school. The total, gross floor area of the building is approximately 211,330 square feet.

The Cafeteria, Kitchen and Administrative offices are located on the First Floor of the Academic Building. To the west, a long ramp off the glazed lobby connects the lowest level of the Fieldhouse/Natatorium to the main building. The Pool, Locker Rooms and Wresting and Weight Rooms are located at this level. On the Second Floor, a block of Classrooms is located between the Library to the south and the Little Theatre to the north. The Field House is also located this level. Additional Classrooms and the school's TV Studio compose the Third Floor.

B. Structural Systems Description

***General Construction*:** Roof construction of the Academic Building is steel framed, with metal deck spanning to steel joists and beams/girders supported by steel columns. The Fieldhouse roof construction consists of metal deck spanning to steel trusses, supported by steel bents which clear span the hexagonal space. Second and Third Floor construction of the Academic Building consists of a concrete slab on metal deck spanning to steel joists and beams/girders supported by steel columns. Second Floor construction of the Fieldhouse is similar, with the exception of the structure located over the Pool. Floor construction in this area consists of a reinforced concrete slab spanning to concrete encased wide flange steel beams, supported by steel columns. First Floor construction for both buildings consists of a concrete slab on grade, varying in thickness and reinforcing. Building columns are typically supported on pile foundations, as is the small, steel framed addition on the south end of the Academic Building constructed in 1995.

Structural Materials: Structural material strengths are noted on the original Structural Drawings as follows:

Minimum 28 - Day concrete compressive strength for concrete:
- Piles – 4,400 psi
- Framed Slabs – 4,000 psi
- Slab on Grade – 3,000 psi
- All others – 3,500 psi

Steel reinforcing is deformed bars conforming to ASTM A615, Grade 60.

Structural steel has an allowable bending stress of 50,000 psi.

Subsurface Soils and Foundations: Spread footings (portions of the Fieldhouse/Natatorium) were proportioned on the basis of a 6.0 tons per square foot (tsf) maximum allowable bearing pressure on the natural soils and 4.0 tsf maximum on controlled fill. However, the majority of the Lord Building is supported on a pile foundation. Grade beams (also serving as tie beams) of various size and reinforcing have been provided between pile caps and below perimeter walls and interior shear walls.

Story Heights: Story heights are as follows:

First to Second (Academic Building):	18'-0"
First to Second (Field House):	20'-0"
Second to Third (Academic Building):	13'-4"
Second to Roof (Field House):	21'-4" (to eave)
Third to Roof (Academic Building):	13'-4"

Design Live Loads: Design live loads are noted on the original Structural Drawings as follows:

Classrooms:	50 psf
Open Classrooms:	100 psf
Corridors:	100 psf
Locker and Assembly Rooms:	100 psf
Toilets:	60 psf
Others:	80 psf
Snow:	30 psf

The building structure appears to have performed satisfactorily over time; there are no indications of structural overstress or failure. A comprehensive investigation and evaluation of the floor and roof structural capacity is beyond the scope of this report. Note that the current code requires a flat roof design snow load (non-drift areas) of 38.5 psf.

Expansion Joints: There are two expansion joints in the building. One, running north-south, is located on the east side of the corridor linking the Academic Building and the Fieldhouse and is present at the Second Floor only. The second, running east-west, separates the southern portion of the Academic Building (between the Fieldhouse and southern pedestrian bridge) from the rest of the building. As previously noted, the Lord Building is structurally separated from the Kouloheras Building by expansion joints located on the west side of each pedestrian bridge.

Roof Construction: Roof construction of the Academic Building consists of 1½" deep, 20 gauge metal decking spanning to steel joists or wide flange beams, spaced at approximately 5'-0" on centers. Joists/beams span to wide flange steel girders supported by rectangular hollow tube (HSS) steel columns. The typical structural bay is 25'-0" by 25'-0".

Roof construction over the Fieldhouse consists of 6" deep, 16/18 gauge cellular metal decking spanning to steel trusses spaced at 18' ± on centers. The trusses, consisting of double angle diagonal members and WT top and bottom chords, are supported by six built-up steel bents, each spanning from one corner of the hexagonal space to a central connection point. Steel wide flange columns, spaced at 26'-0" on centers, are embedded in 12" thick CMU shear walls located at the perimeter of the six-sided Fieldhouse structure.

Second and Third Floor Construction: Second and Third Floor construction of the Academic Building consists of a 3½" concrete topping slab over 9/16", 28 gauge metal deck (4"+/- total slab thickness) spanning to steel joists spaced at approximately 2'-0" on centers. Steel joists span to wide flange steel girders, supported by steel columns. See the roof construction description above for typical bay sizes.

Second Floor construction in the Fieldhouse is similar to that in the Academic Building (described above), except for the portion of floor located over the Pool. At this location, the concrete slab on deck is replaced by a 10" thick reinforced concrete slab supported by 36" deep, concrete encased, wide flange steel beams. The concrete encased beams, spaced at 25'-0" on centers, span 60'-0" to rectangular hollow tube steel columns located on the east and west sides of the Pool.

Foundations and First Floor Construction: As previously noted, the building is supported by reinforced concrete grade beams (at exterior walls and below CMU shear walls) and pile foundations. First Floor slab on grade construction varies throughout the building. Below the southern portion of the Academic Building, an 8" thick, structural concrete slab on grade has been provided. The slab on grade is supported by 3'-0" deep x 1'-8" wide reinforced concrete grade beams running along the major east-west column lines.

First Floor construction for the remainder of the Academic Building consists of an 8" thick concrete slab on grade, reinforced with welded wire fabric, thickened to 14" for 2'-0" wide strips on all major column lines.

First Floor construction of the Fieldhouse consists of a 4" thick concrete slab on grade reinforced with welded wire fabric. Below the Pool, an 8" thick concrete slab has been provided. Columns at the perimeter of the Pool are supported by conventional spread footings. A 10" thick reinforced concrete slab with integral beams, supported by reinforced concrete columns on spread footings, completes the First Floor construction over the partial basement (Pool Chemical Room) on the west side of the Fieldhouse.

Pedestrian Bridge Construction: Although constructed at different times, the structure of the two, three-span pedestrian bridges is similar. The south bridge, built in 1980, is constructed with 6" deep, 16/18 gauge metal deck with a 4" concrete topping slab spanning to 36" deep, upturned wide flange steel beams running along each side of the bridge. Embedded within the slab are 8" deep steel channels, spaced at 4'-0" on centers along the length of the bridge, which tie/brace the bottom flanges of the upturned beams on each side of the bridge. The upturned steel beams are supported on each side of the Merrimack Canal by 24" deep wide flange steel girders (with 3/8" full height face plates each side); each supported at midpoint by a single 20" diameter steel pipe column on pile foundations. Slide bearing pads have been provided at the each end of each bridge, where they tie into the Kouloheras and Lord Buildings, and also above the W24 girder located on the east side of the canal (however, not at the W24 girder located on the west side of the canal).

The north bridge, built in 1995, is constructed with 2" deep metal deck and a 2½" concrete topping slab (4½" total slab thickness), spanning to 8" deep steel channels spaced at 4'-0" on centers. Similar to the 1980 bridge, the channels span to 36" deep, upturned wide flange steel beams which are supported by 24" deep steel girders on 20" diameter steel columns with a pile foundation. Slide bearing conditions are similar to the older bridge.

Wall Construction: Exterior wall construction consists of brick veneer and/or split face concrete block, cement asbestos panels, glazing, and continuous or punched window units. Concrete block backup wall thicknesses vary from 8" to 12". A continuous relieving angle is provided at each framed level around the entire perimeter of the building.

Interior partitions (classroom demising walls, corridors, etc.) are typically light gauge metal stud wall construction or interior CMU shear walls strategically located throughout the building.

Fire Resistance: The unprotected steel framing has no fire resistance rating (Type IIB Construction). The Academic Building appears to be fully sprinklered; however, sprinklers have not been provided in the Fieldhouse/Natatorium. It appears that a fire wall was provided in the original construction, separating the Academic Building from the Fieldhouse/Natatorium (different uses) and allowing each to be noncombustible, unprotected construction. As the Kouloheras Building is connected to the Lord Building via the two pedestrian bridges, additional measures (i.e. fire/smoke rated doors at the ends of the bridges) would be required to consider the buildings to be fire separated (note that they are structurally separated, due to the presence of the aforementioned expansion joints).

Lateral Load Resistance: The Lord Building was designed and constructed following the introduction of seismic code provisions in Massachusetts. Lateral loads are resisted by reinforced masonry shear walls, strategically located throughout the Academic Building and the Fieldhouse/Natatorium.

C. Structural Conditions/Recommended Repairs

Structural Conditions at the Lord Building were reviewed at the site (to the extent possible) on August 26, 2016 and September 8, 2016. Generally speaking, floor and roof construction appear to be in satisfactory condition; there is no evidence of structural distress that would indicate significantly overstressed, deteriorated or failed structural members.

Foundations appear to be performing adequately; there are no signs of significant, total or differential settlements.

Floors and roofs appear to have been constructed in general accordance with the original Structural Drawings.

Structural/structurally related conditions observed on site are summarized below; recommended repairs are noted in *italics*:

1. Building Exterior:

    - Horizontal cracks in the masonry supported by the continuous relieving angles provided at each level were observed at the Academic Building and at the Fieldhouse/Natatorium. *Further evaluation of as-built details/conditions is recommended. These conditions exist throughout each of the buildings and represent a potential hazardous situation. The preliminary cost estimate should include costs to repair the brick and relieving angle system.*
    - Soffit construction (aluminum panel) is sagging/damaged in the area over the exhaust for the below ground Pool Room. *Repair/replacement of aluminum soffit required.*
    - Staining and spalling of the brick façade at the integral downspouts around the perimeter of the Fieldhouse was observed. The integral downspout system does not appear to be functioning as intended. *Further evaluation and*

design/installation of an alternate downspout detailing recommended. Cleaning of adjacent masonry will also be required.

- Cement board panels around the building are in various stages of deterioration (broken, detached, missing, open joints, etc.). *Repair/replacement of panels required.*
- Some cracks were observed in exposed foundation walls; including one location at the northwest corner of the Academic Wing. *Repair by epoxy injection recommended, to prevent further freeze-thaw deterioration.*

2. Masonry Walls: Interior (stack bond) masonry walls are generally in satisfactory condition. However, cracking was observed in the stair well on the west end of the Fieldhouse. Further review of stairwell masonry construction is recommended. The anchorage/bracing of interior masonry partitions to the floor and roof construction as well of the height-to-thickness ratios will need to be evaluated and addressed (per code) if the building is renovated in the future (or undergoes a voluntary repair). *The preliminary cost estimate should include an allowance to anchor/brace the tops of all (non-structural) interior masonry partitions (approximately 4'-0" o.c. spacing of anchors/braces).*

3. The anchorage of exterior masonry walls to the floor and roof construction will need to be evaluated and addressed (per code) if the building is renovated in the future (or undergoes a voluntary repair). *The preliminary cost estimate should include an allowance to anchor the tops of all exterior masonry walls (approximately 4'-0" o.c. spacing of anchors).*

4. Pool Deck: The Pool area was not accessed during either recent site visit; however, FBRA observed deterioration of the concrete slab pool deck (from below) in 2013. The reinforced concrete structure in this area should be evaluated and repaired as required. *The preliminary cost estimate should include costs for concrete repairs to the entire pool deck (chipping, cleaning, rebar coating, patching, etc.).*

5. The condition of the Field House floor (above the pool) was not determined. Due to the deleterious nature of the swimming pool environment, FBRA recommends that this construction be inspected for signs of distress/deterioration (currently obscured by finishes).

6. Roof: The roof was not accessed during the either site visit. However, evidence of roof leaks was observed throughout the building. *PE has reviewed the existing roofs; replacement of the flat roofs is required. Drainage issues should be evaluated and addressed as part of the new roof design.*

Refer to the APPENDIX at the end of this report, for photographs of structural/structural conditions that require repair.

III. FRESHMAN ACADEMY

Structural conditions at the Freshman Academy were reviewed at the site on September 8, 2016.

The following documents for this building were reviewed in the preparation of this report:

Renovations for the Arts & City Schools: Structural Drawings S1 to S7, prepared by Engineers Design Group Inc., dated July 29, 1985.

Renovations for the Arts & City Schools: Architectural Drawings A1 to A44, prepared by HMFH Architects Inc., dated July 29, 1985.

The Magnet Arts & City Schools Renovations: Various Architectural (Reflected Ceiling Plans), HVAC and Electrical Drawings, prepared by Sverdrup Facilities, Inc., dated April 2, 1997.

Lowell Public Schools - Comprehensive Facilities Assessment: Master Plan Report and Existing Conditions Documentation, prepared by OMR Architects, dated July 2013.

Original Structural and Architectural Drawings were not available for the 1900 and 1939 sections of the building at the time of this report. The descriptions of Structural and Architectural systems provided within this report for these sections were derived from observations on site or obtained from the renovation and alteration drawings listed above.

A. General Description

The Freshman Academy is comprised of an original, three-story wood and steel framed structure, with a full basement, constructed in 1900 (one block east of the Kouloheras Building), fronting Paige Street. An attached, two-story steel and concrete framed addition (of similar size), with a partial basement was constructed in 1939 on the north side of the original building. The facility underwent significant renovations 1985. The total, gross floor area of the building is approximately 92,760 square feet.

The Cafeteria/Multi-Purpose Room, Kitchen and Theater are located in the Basement of the 1900 portion of the building. The 1939 steel framed portion of the facility is mostly unexcavated at this level, except for the middle third of the building, which houses a few Classrooms. Administrative Offices and Classrooms are located on the First Floor, which also hosts a central Courtyard with large skylights. Classrooms compose the Second and Third Floors. An Elevator Penthouse, constructed as a part of the 1985 renovations, and a Mechanical Room are located on the west side of the 1939 portion of the building at the Third Floor level.

B. Structural Systems Description

Structural Description: The original (1900) building is primarily wood framed. Third and Second Floor construction consists of wood flooring over wood joists. First Floor construction is similar, with wood floor joists spanning to large steel trusses which clear span the Cafeteria and Theater spaces below. The 1939 (addition) portion of the building is concrete and steel framed, with roof construction consisting of metal deck spanning to steel joists and beams/girders. Second Floor construction consists of concrete slab on metal deck spanning to steel joists and beams/girders. First Floor construction consists mainly of concrete slab on grade construction. Floor construction over the middle third of the addition (where a basement is present below) is concrete slab on metal deck, spanning to steel joists. The central Courtyard, located at the First Floor between the 1900 and 1939 buildings, is constructed with metal deck spanning to wide flange steel beams. Three steel framed skylight openings allow natural light to pass into the basement corridor below. The lowest level construction is concrete slab on grade. Structural information related to existing foundation was not available.

Structural Materials: Structural material strengths for the building were not available.

Subsurface Soils and Foundations: No subsurface soils information was available. It is assumed that the building is supported on a spread footing foundation. Foundation walls in the original building are mortared field stone; concrete foundation walls were constructed in the 1939 addition.

Story Heights: Story heights are as follows:

Basement to First:	11'-0"
First to Second:	13'-0"
Second to Third:	13'-6"
Third to Roof:	13'-3"

Design Live Loads: Design live load information is not available for the building; however, the floor structure appears to be performing satisfactorily under the current use.

Expansion Joints: There is no expansion joint between the original building and the 1939 addition.

Exterior Walls: Exterior wall construction is load bearing unreinforced masonry (approximately 16" thick at the 1939 addition).

Fire Resistance: Wood and steel framed floor and roof construction has no fire resistance rating, other than that which may be provided by the original plaster ceilings. Per the Code Report, the minimum classification for this building would be Type IIIB Construction (combustible interior – 1 hour fire resistance rating; 2 hour noncombustible exterior wall). The Freshman Academy appears to be fully sprinklered.

Lateral Load Resistance: There is no defined lateral load resisting system; by default, lateral loads are resisted by the (unreinforced) masonry walls.

C. Structural Conditions/Recommended Repairs

Structural Conditions at the Freshman Academy were reviewed at the site (to the extent possible) on September 8, 2016. Generally speaking, floor and roof construction appear to be in satisfactory condition; there is no evidence of structural distress that would indicate significantly overstressed, deteriorated or failed structural members.

Foundations appear to be performing adequately; there are no signs of significant, total or differential settlements.

Structural/structurally related conditions observed on site are summarized below; recommended repairs are noted in *italics*:

1. Building Exterior:

    - Patching and repointing of concrete and masonry elements in the original 1900 building were observed in various locations adjacent to the 1939 Addition. *Similar repairs are recommended elsewhere, on the exterior of the original 1900 building.*
    - Brick joints in the 1939 addition generally appear to be in satisfactory condition; however, joints in the original building are typically in poor condition. *The preliminary cost estimate should include costs for repointing 10% of the 1939 addition and 100% of the original 1900 building.*
    - Face brick at the original building and the addition (the east side in particular) has spalled in a number of locations; this brick is vulnerable to further deterioration resulting from freeze-thaw action. *Remove and replace face brick in limited areas of each building.*

- Cracks in stone window sills were observed in limited locations (1939 addition). *Repair stone sills as required*.
- Steel loose lintels at the 1939 addition have corroded in a number of locations; rust-jacking of the brick has occurred. There are no steel lintels at the original building (brick arches provided). *Remove and replace approximately 10% of the lintels; elsewhere, clean and coat the existing lintels.*

2. Further review of the (low) skylight/roof between the original building and the 1939 addition is recommended. This is an area where significant snow and rainwater can accumulate. *The preliminary cost estimate should include costs for a separately piped, overflow drain system to prevent a potential unsafe accumulation of rainwater on this roof. Costs for reinforcing this roof (approximately $20.00/SF) should be included as well.*

3. Masonry Walls: Interior masonry walls are generally in satisfactory condition. The anchorage/bracing of interior masonry partitions to the floor and roof construction as well of the height-to-thickness ratios will need to be evaluated and addressed (per code) if the building is renovated in the future (or undergoes a voluntary repair). *The preliminary cost estimate should include an allowance to anchor/brace the tops of all (non-structural) interior masonry partitions (approximately 4'-0" o.c. spacing of anchors/braces).*

4. The anchorage of exterior masonry walls to floor and roof construction will need to be evaluated and addressed (per code) if the building is renovated in the future (or undergoes a voluntary repair). *The preliminary cost estimate should include an allowance to anchor the tops of all exterior masonry walls (approximately 4'-0" o.c. spacing of anchors).*

5. Water damage to ceilings was observed in a number of locations, relating to roof leakage. *PE has reviewed the existing roofs; replacement of the flat roofs is required. Drainage issues should be evaluated and addressed as part of the new roof design.*

6. Flooring has failed in a number of locations and the substrate appears to be "punk". A gypsum leveling course may be present, which has deteriorated over time from high traffic and routine maintenance (mopping). *Further evaluation is recommended. The preliminary cost estimate should include costs to remove and replace flooring/leveling materials.*

Refer to the APPENDIX at the end of this report, for photographs of structural/structural conditions that require repair.

IV. STEAM PLANT

Structural conditions at the Steam Plant were reviewed at the site on September 8, 2016.

The following documents for this building were reviewed in the preparation of this report:

Addition to the Lowell High School: Henry L. Rourke Architect; Various HVAC and Electrical Drawings (Including the Steam Plant), prepared by Richard D. Kimball Co. Engineers, undated (Circa 1917).

Lowell Steam Plant: Architectural Drawings A101 to A401, prepared by Sverdrup Facilities Inc., dated April 22, 1996.

Lowell Public Schools - Comprehensive Facilities Assessment: Master Plan Report and Existing Conditions Documentation, prepared by OMR Architects, dated July 2013.

Original Structural and Architectural Drawings were not available for the Steam Plant at the time of this report (only HVAC and Electrical Drawings were available). The descriptions of Structural and Architectural systems provided within this report for this building were derived from observations on site or obtained from the renovation and alteration drawings listed above.

A. General Description

The Steam Plant is a one-story concrete and steel framed structure, with brick bearing walls, constructed in 1939 and renovated in 1996. The approximately 2,500 square foot building houses the major mechanical equipment (generator and boiler) for the adjacent Freshman Academy. A clerestory space, with louvers on all sides, projects up above the main roof at the center of the building. An access ladder extends from the ground floor to a small grated platform at roof level. A full height CMU enclosure was constructed around the Generator/Electrical Room during the 1996 renovations. At the southwest corner of the building, a stairway leads down to a passageway/storage area below the neighboring National Park Service building and a tunnel below Kirk Street to the Lord Building.

B. Structural Systems Description

General Construction: The building is steel and concrete framed with brick bearing walls. Roof construction consists of concrete slab over steel trusses which clear span the space to brick bearing walls on building's north and south sides. First Floor construction consists of concrete slab on grade with concrete pads below the larger pieces of equipment. Structural information related to existing foundation construction is limited.

Structural Materials: Structural material strengths for the building are not available.

Subsurface Soils and Foundations: Subsurface soils and foundation information for the building are not available.

Story Heights: Story height information for the building was not determined.

Design Live Loads: Design live load information is not available for the building.

Expansion Joints: There are no expansion joints within the building.

Roof Construction: Roof construction consists of concrete slab supported by concrete encased steel beams, which span to three equally spaced steel trusses. Steel trusses clear span the building and are supported by perimeter brick bearing walls on the north and south sides of the building.

Floor Construction: Floor construction consists of concrete slab on grade (thickness unknown). Concrete housekeeping pads have been provided for equipment.

Wall Construction: Exterior wall construction consists of brick bearing walls (approximately 16" thick). A full height enclosure, consisting of 12" thick CMU wall construction, was installed around the Electrical Room as part of the 1996 renovations. Continuous concrete footings were provided below the interior CMU walls.

Fire Resistance: The unprotected steel roof framing has no fire resistance rating (Type IIB Construction). The Steam Plant has not been equipped with a sprinkler system.

Lateral Load Resistance: There is no defined lateral load resisting system; by default, lateral loads are resisted by the (unreinforced) masonry walls.

C. Structural Conditions/Recommended Repairs

Structural Conditions at the Steam Plant were reviewed at the site (to the extent possible) on September 8, 2016. Generally speaking, floor and roof construction appear to be in satisfactory condition; there is no evidence of structural distress that would indicate significantly overstressed, deteriorated or failed structural members.

Foundations appear to be performing adequately; there are no signs of significant, total or differential settlements.

Structural/structurally related conditions observed during our site visit are summarized below; recommended repairs are noted in *italics*:

1. Building Exterior:

    - Patching and repointing of masonry elements were conducted during the 1996 renovations. *Similar repairs are recommended for the brick stack (see photos).*

    - Masonry Walls: There are areas where the existing brick bearing walls are showing signs of deterioration, specifically at the building's southwest corner where an exterior ramp was constructed tight to the exterior wall. *The preliminary cost estimate should include costs to repair the brick construction (see photos).*

2. Masonry Walls: Interior masonry walls surrounding the Generator/Electrical Room are generally in satisfactory condition. The anchorage/bracing of these walls to the roof construction as well of the height-to-thickness ratios will need to be evaluated and addressed (per code) if the building is renovated in the future (or undergoes a voluntary repair). *The preliminary cost estimate should include an allowance to anchor/brace the tops of (non-structural) these walls (approximately 4'-0" o.c. spacing of anchors/braces).*

3. The anchorage of exterior masonry walls to the roof construction will need to be evaluated and addressed (per code) if the building is renovated in the future (or undergoes a voluntary repair). *The preliminary cost estimate should include an allowance to anchor the tops of all exterior masonry walls (approximately 4'-0" o.c. spacing of anchors).*

Refer to the APPENDIX at the end of this report, for photographs of structural/structural conditions that require repair.

RECOMMENDED FIELD INVESTIGATIONS

With the exception of the Lord Building (including the Fieldhouse/Natatorium) and the 1995 addition to the Kouloheras Building, limited structural documentation was available. In particular, there were no structural documents for the 1922 addition to the Kouloheras Building and the Freshman Academy (both the original building and the 1939 addition). Accordingly, FBRA recommends that

finishes be removed in selected locations during the Feasibility Study, so the general details of the floor and roof construction in these buildings can be determined. This information will be crucial in determining the structural feasibility of reinforcing, modifying, adding to, or removing portions of the existing floor and roof construction, as well as the approximate costs involved in doing so.

RENOVATIONS AND ADDITIONS – MEBC REQUIREMENTS

General comments relating to potential renovations, alterations and additions to the Lowell High School are presented in this section. Renovations, alterations, repairs and additions to existing buildings in Massachusetts are governed by the provisions of the Massachusetts State Building Code (MSBC – 8th Edition) and the Massachusetts Existing Building Code (MEBC). These documents are based on amended versions of the 2009 International Building Code (IBC) and the 2009 International Existing Building Code (IEBC), respectively.

The MEBC defines three (3) compliance methods for the repair, alteration, change of occupancy, addition or relocation of an existing building. The method of compliance is chosen by the Design Team (based on the project scope and cost considerations) and cannot be combined with other methods.

The Prescriptive Compliance Method (IEBC Chapter 3) duplicates Sections 3403 through 3411 of Chapter 34 in the IBC and prescribes specific minimum requirements for construction related to additions, alterations, repairs, fire escapes, glass replacement, change of occupancy, historic buildings, moved buildings and accessibility. A complete structural evaluation of the building is required by the Massachusetts Amendments. If the impact of the proposed alterations and additions to structural elements carrying gravity loads and lateral loads is minimal (less than 5% and 10% respectively), seismic upgrades to an existing building are generally not required.

The *Work Area Compliance Method* (IEBC Chapters 4 through 12) is based on a proportional approach to compliance, where upgrades to an existing building are triggered by the type and extent of work. The Work Area Compliance Method includes requirements for three levels of alterations, in addition to requirements for repairs, changes in occupancy, additions, historic buildings or moved buildings. A complete seismic evaluation of the existing building is required under the following conditions: Level 2 alterations where the demand to capacity ratio of lateral load resisting elements has been increased by more than 10%, all Level 3 alterations, a change in occupancy to a higher category, and where structurally attached additions (vertical or horizontal) are planned.

The *Performance Compliance Method* (IEBC Chapter13) duplicates Section 3412 of Chapter 34 in the IBC and provides for evaluating a building based on fire safety, means of egress and general safety (19 parameters total). This method allows for the evaluation of the existing building to demonstrate that proposed alterations, while not meeting new construction requirements, will maintain existing conditions to at their current levels (at a minimum) or improve conditions, as required. A structural investigation and analysis of the existing building is required to determine the adequacy of the structural systems for the proposed alteration, addition or change of occupancy. A report of the investigation and evaluation, along with proposed compliance alternatives must be submitted to the code official for approval.

The previously referenced, Sullivan Code Group report is based on the Work Area Compliance Method.

Additions – General Comments - MEBC

The design and construction of any addition to the Lowell High School would be conducted in accordance with the Code for new construction. Any proposed additions should be structurally separated from the existing, adjacent construction by an expansion (seismic) joint to avoid an increase in gravity loads or lateral loads to existing structural elements. Refer to the Code Report for a discussion of fire separation issues (i.e. fire wall requirements) relating to potential additions to the existing buildings.

Renovations/Alterations – General Comments - MEBC

Where proposed alterations to existing structural elements carrying gravity loads result in a stress increase of over 5%, the affected element will need to be reinforced or replaced to comply with the Code for new construction. Proposed alterations to existing structural elements carrying lateral load (i.e. existing, unreinforced masonry walls) which result in an increase in the demand - capacity ratio of over 10% should be avoided, if possible. Essentially, this means that removal of, or major alterations to the existing, exterior unreinforced masonry bearing walls in the original building and subsequent additions should be minimized.

Additional Comments – Seismic Issues

- None of the buildings which comprise the Lowell High School meet current seismic code requirements. With the exception of the Lord Building (reinforced masonry shear walls) the lateral force resisting system is not well defined for any of the buildings. By default, lateral force resistance is provided by interior and exterior (unreinforced) masonry walls.

- The code generally does not require a seismic retrofit/upgrade, provided the use stays the same (as will be the case for this project), structural alterations are not considered to be "substantial", and the *demand-to-capacity ratio* of any element resisting lateral loads (i.e. masonry walls), *does not increase by more than 10% over current levels*. "Demand" is the seismic force (proportional to mass); adding significant mass to the building should be avoided (major additions should be structurally separated). "Capacity" is the capacity of the walls to resist lateral forces. Creating new, large openings in masonry walls or removing large sections of the walls should be avoided; otherwise, they would need to be replaced elsewhere (with new, reinforced masonry or concrete walls), making the argument that the stresses in the remaining, existing walls do not increase by more than 10%. If the modifications are such that this argument cannot be made, then the building would need to be retrofitted/upgraded to resist 50% to 75% of the seismic loading required by the code for new construction (% depends on the extent of structural alterations). This would have a significant cost impact.

- If the "Work Area" (defined as the area of reconfigured spaces within the building) less than 50% of the total area, the renovation would be classified as a *Level 2 Alteration* – no seismic upgrades would be necessary unless the 10% requirement noted above is not met. If the work area exceeds 50% of the total area of the building, the renovation would be classified as a *Level 3 Alteration.* Certain seismic hazards (anchorage of floor and roof diaphragms to masonry walls, bracing of chimneys, bracing of parapets, etc.) would need to be addressed. No further seismic upgrades would be required unless the 10% requirement noted above is not met.

- In either a *Level 2* or a *Level 3 Alteration,* if the 10% requirement cannot be met, and the structural alterations are not considered to be "substantial" (see below), the building would need to be evaluated and reinforced to withstand 50% of the seismic loading required by the code for new construction (significant cost impact).

- If a *Level 3 Substantial Structural Alteration* is proposed, where more than 30% of the total floor and roof area is structurally altered, the building will need to be evaluated and reinforced to withstand full wind loading and 75% of the seismic loading required by the code for new construction (again, a significant cost impact).

End of Existing Conditions Evaluation/Base Repair Structural Report

APPENDIX – PHOTOGRAPHS

Kouloheras
Lord
Freshman Academy
Steam Plant

Photo K-1: Flooring failure - possible sub-slab moisture issues.

Photo K-2: Cracks in terrazzo flooring.

Photo K-3: Ceiling damage from roof leakage.

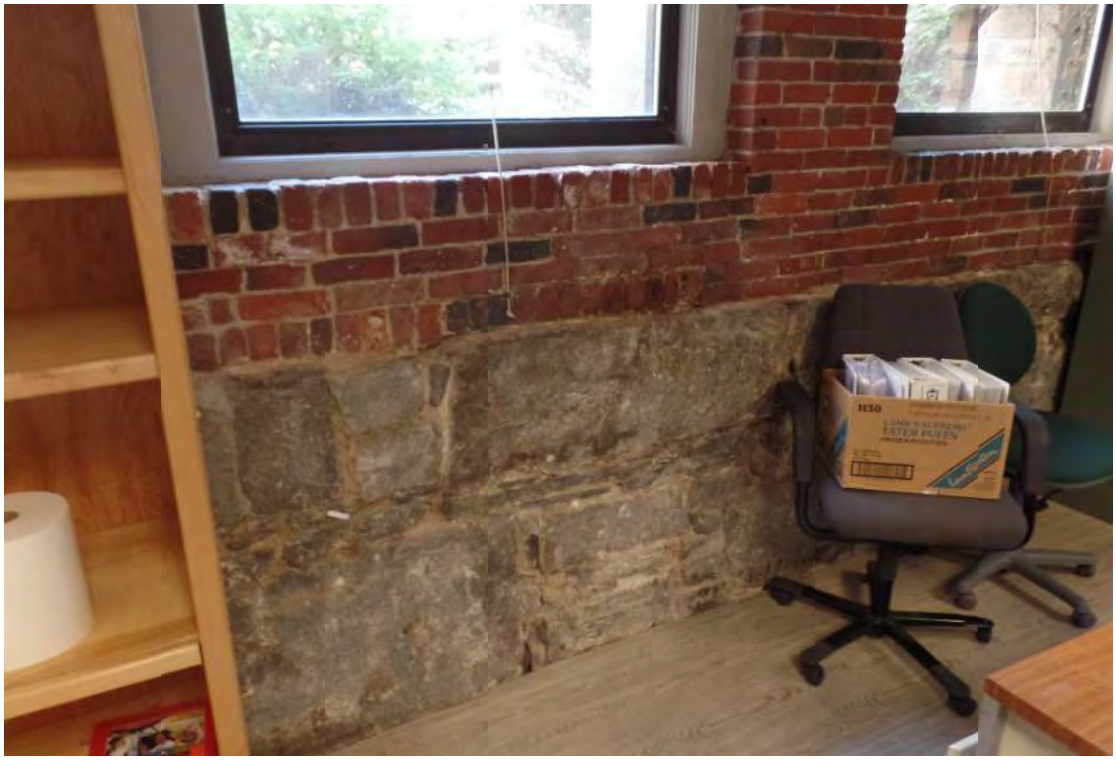

Photo K-4: Water damage at north foundation wall of Coburn. Basement reportedly has flooded in the past.

.

Photo K-5: Steel channel reinforcing of original wood joists in Coburn.

Photo K-6: Joint deterioration above stone watertable course.

Photo K-7: Rust-jacking of face brick - upwards and outwards.

Photo K-8: Missing cornice stone.

Photo K-9: Downspout discharges adjacent to basement wall.

Photo K-10: Damaged concrete at embedded (aluminum) railing post.

LORD/FIELDHOUSE

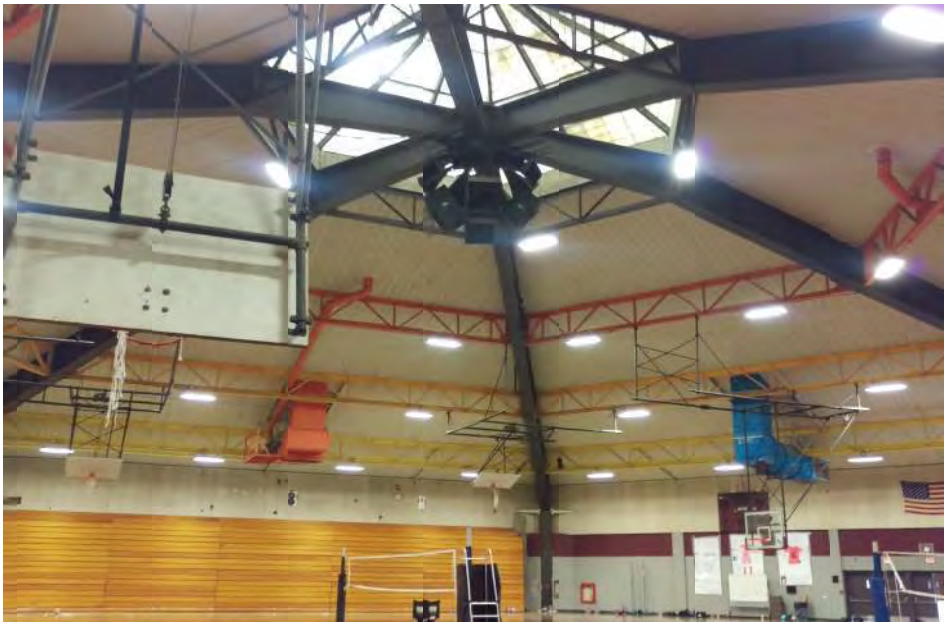

Photo L-1: Fieldhouse roof structure.

Photo L-2: Crack in CMU wall at stair on west side of Fieldhouse.

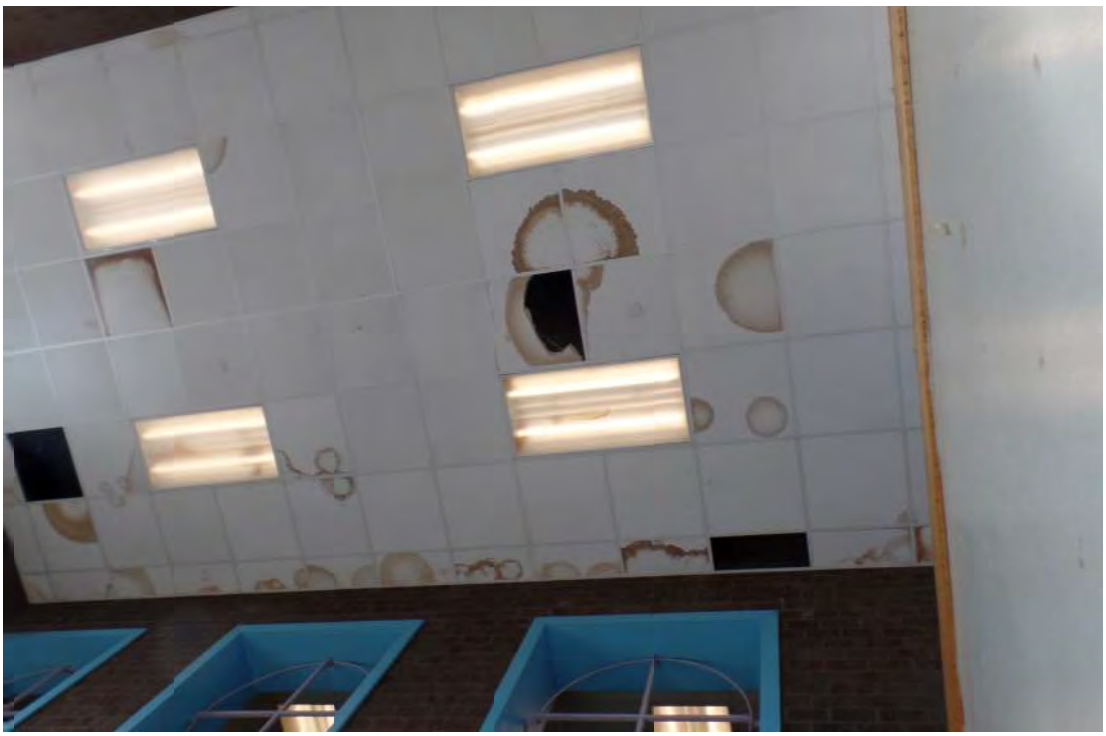

Photo L-3: Ceiling damage due to roof leakage.

Photo L-4: Deterioration/open joints at cement board enclosures (typical condition).

Photo L-5: Cracked brick at relieving angle (typical condition).

Photo L-6: Deteriorated/failed masonry at roof edge (Fieldhouse).

Photo L-7: Deterioration, discoloration and efflorescence at integral downspouts.

Photo L-8: Vertical crack in brick at corner.

Photo L-9: Cracked brick at relieving angle.

Photo L-10: Exposed, rusted steel and deck at Fieldhouse.

Photo L-11: Deteriorated cement board panels, discoloration at downspout.

Photo L-12: Cracked Brick at relieving angle.

Photo L-13: Fieldhouse downspout - not piped to a drainage structure; erosion occurring.

Photo L-14: Crack at NE corner of Academic Building

FRESHMAN ACADEMY

Photo FA-1: Past brick repairs to original (1900) building, open joints at foundation stones.

Photo FA-2: Flooring failure in 1900 building - possible gypsum based underlayment present.

Photo FA-3: Steel transfer trusses at Cafeteria (1900 Building).

Photo FA-4: Steel transfer trusses at Auditorium (1900 Building).

Photo FA-5: Deteriorated/failed brick joints and rusting lintels (1900 Building).

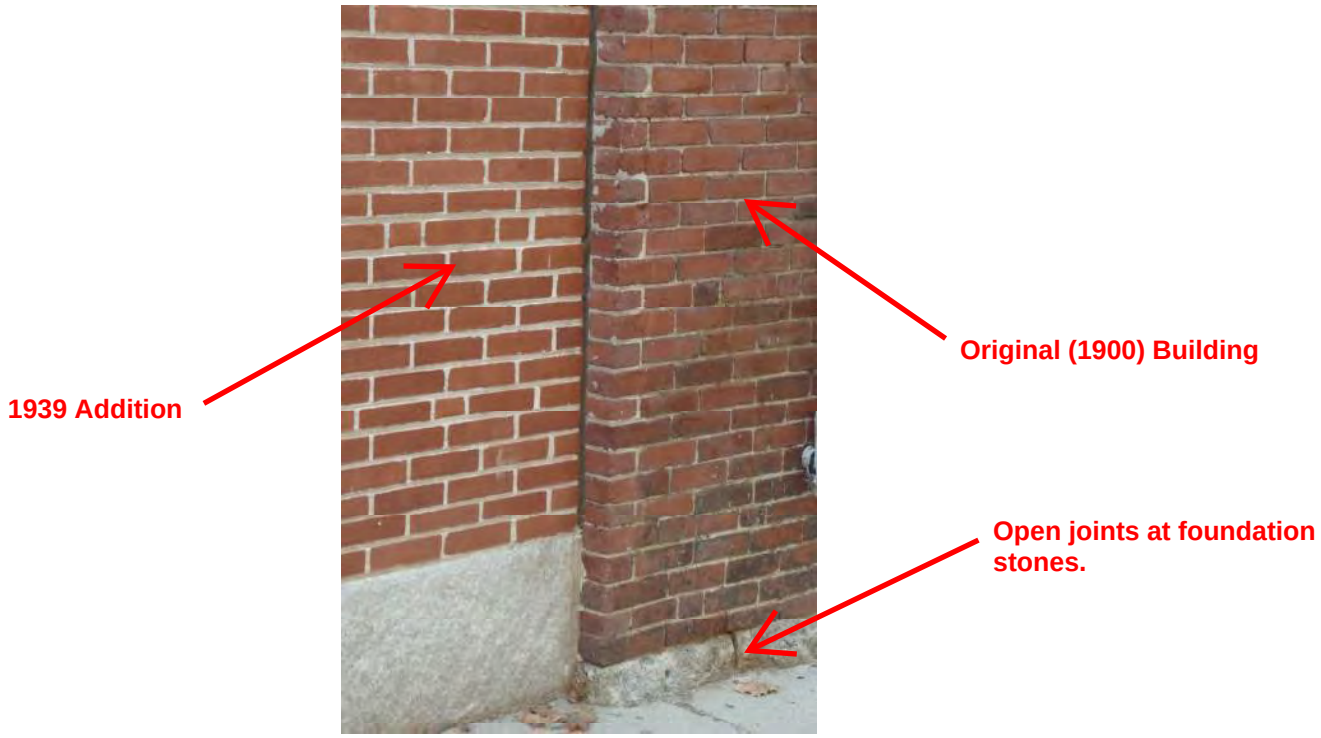

Photo FA-6: Joint between (original) 1900 building and 1939 addition.

Photo FA-7: Cracked stone sill at 1900 building.

Photo FA-8: Open joint at foundation stone and deteriorated face brick.

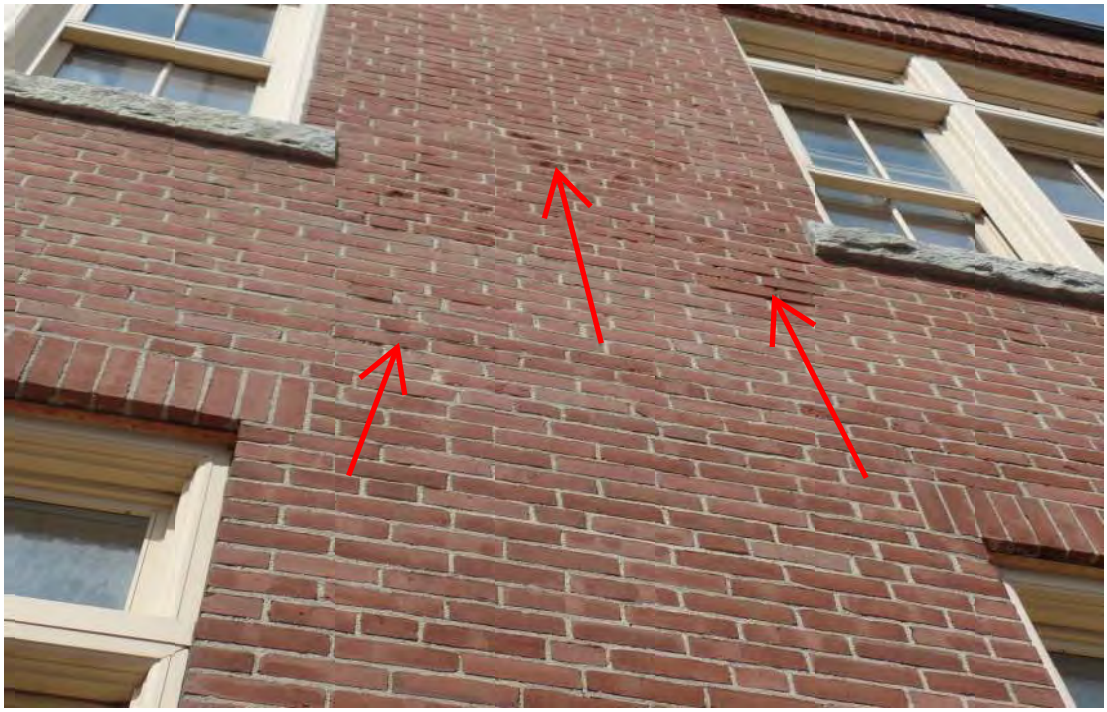

Photo FA-9: Deteriorated face brick at 1900 building.

Photo FA-10: Ceiling damage due to roof leakage.

STEAM PLANT

Photo SP-1: Interior of plant, showing tall brick masonry exterior walls and roof construction.

Photo SP-2: Brick deterioration at SW corner of building, adjacent to drain leader.

Photo SP-3: Masonry deterioration below roof at the southwest corner.

Photo SP-4: Wood roof construction below sidewalk between the Steam Plant and the adjacent NPS Building.

Photo SP-5: Wood roof construction below sidewalk between the Steam Plant and the adjacent NPS Building.

Photo SP-6: North elevation of Steam Plant, with stack in the background

Photos SP-7 and SP-8: Stack repointing required.

Perkins Eastman | DPC

Lowell High School Base Repair Project Scope

November 21, 2016

1. HC Accessible Ramps
2. Masonry veneer replacement at Field House
3. Replacement of all exterior sealants
4. Replacement of all windows
5. Replacement of all exterior doors
6. Replacements of all roofs
7. Modification of existing interior walls for accessibility
8. Modifications to existing science rooms for accessibility
9. Replacement of selective doors for accessibility
10. Replacement of all hardware locksets
11. Replacement of selective toilet rooms for accessibility
12. Replacement of shower rooms for accessibility
13. Paint all interior walls
14. Replace all floor finishes
15. Replace all ceilings
16. Renovate all stairs for accessibility
17. Replace and add elevators for accessibility
18. Add HC lifts for accessibility
19. Replace Plumbing system
20. Replace HVAC Systems
21. Replace electrical systems
22. Replace fire protection system
23. Replace casework
24. Hazmat abatement
25. Replace concrete sidewalks and entry
26. Replace granite curbing
27. Replace bituminous paving
28. Replace catch basins
29. Separate sanitary and storm water system for future connection by city
30. Provide some level of storm water infiltration
31. Replace all utilities
32. Provide site lighting

LOWELL HIGH SCHOOL
BASE REPAIR KEY NOTES
KOULOHERAS BUILDING
10/28/16
Rev. 10/31/16
PE # 67150.00

GENERAL NOTES:

1. **GENERAL NOTES APPLY TO ALL CONDITIONS NOTED BELOW EVEN IF NOT NOTED ON BASE REPAIR SPREADSHEETS.**
2. **REFER TO EXISTING CONDITIONS / BASE REPAIR REPORTS FOR CONSULTANT SCOPE.**
3. **REPLACE ALL DOORS.**
4. **ALL GWB & PLASTER WALLS ARE PAINTED / REPAINTED.**
5. **REMOVE ONE SIDE OF WALL TO INSTALL NEW PIPING AND PLUMBING FIXTURE CARRIERS.**
6. ***NOT USED***
7. **REPLACE ALL COMPLETE HARDWARE SETS.**
8. **INSTALL POWER OPERATORS AT 50% OF DOORS TO PROVIDE HC COMPLIANCE.**
9. **INSTALL 2'-0" W. X 4'-0" L. 2-HR. RATED SHAFTWALL CHASE; MODIFY FRAMING AS REQUIRED. PROVIDED RATED SHAFTBOTTOM AT 1ST FLR. FRAMING NOTE: CHASE GRAPHIC NOT SHOWN ON PLAN.**
10. **REPAIR GWB/PLASTER/WD WAINSCOAT AT ALL EXTERIOR WALLS RESULTING FROM REMOVAL OF RADIATORS.. NOTE: RADIATOR GRAPHIC NOT SHOWN ON PLANS**
11. **CHALKBOARDS ARE REMOVED PER HAZ MAT REPORT. PATCH ALL PLASTER WALLS WHERE CHALKBOARDS ARE REMOVED. REPAIR/REPAINT ALL RUNNING TRIM TO REMAIN AT CHALKBOARD SURROUND.**
12. **INSTALL NEW TOILET ACCESSORIES THROUGHOUT.**
13. **REPLACE ALL CEILINGS.**
14. **REPLACE ALL DOORS.**
15. **REPAINT EXISTING SINGLE TIER LOCKERS WITH ELECTROSTATIC PAINT, REPLACE 20% OF LOCKERS.**
16. **REPLACE ALL CODE AND DIRECTIONAL SIGNAGE WITH CODE COMPLIANT BRAILLE SIGNAGE**

FLOOR:

VCT/VINYL SHEET

F100	REPLACE VCT/VINYL SHEET OR CARPET W/ BIOBASED TILE.
F101	REPLACE VAT
F102	PATCH REPAIR VCT
F103	CLEAN AND WAX VCT/SHEET VINYL
F104	REPLACE TRANSITION STRIP
F105	CLEAN SHEET VINYL FLOORING
F106	REPLACE RADIAL RUBBER
F107	REPLACE SHEET VINYL FLOORING TREADS AND RISERS

F108 REPLACE WOOD FLOOR W/ BIOBASED TILE. REMOVE WOOD FLOOR, FASTEN ROUGH SAWN WOOD, INSTALL ROSIN PAER & E/4" T&G PLYWOOD, AND BIOBASED TILE. TAPER FLOORING AT THRESHOLD.

F109 REPLACE CARPET W/ BIOBASED TILE. REMOVE WOOD FLOOR OR PLYWOOD AS OCCURS, FASTEN ROUGH SAWN WOOD, INSTALL ROSIN PAPER & E/4" T&G PLYWOOD, AND BIOBASED TILE. TAPER FLOORING DOOR AT THRESHOLD.

F110 CLEAN SHEET VINYL

F111 REPLACE CARPET W/ BIOBASED TILE.

F112 REPLACE RESILIENT DANCE FLOOR

F113 REPLACE SHEET VINYL FLOORING W/ LINOLEUM.

F114 INSTALL BIOBASED TILE

F115 REPLACE CERAMIC TILE AND INSTALL BIOBASED TILE. REMOVE WOOD FLOOR OR PLYWOOD AS OCCURS, FASTEN ROUGH SAWN WOOD, INSTALL ROSIN PAPER & E/4" T&G PLYWOOD, AND BIOBASED TILE. TAPER FLOORING DOOR AT THRESHOLD.

C201 REPLACE PLASTER CLG
C202 PATCH & REPAIR PLASTER CLG
C203 REPAINT PLASTER CLG
C204 PATCH AND REPAIR PLASTER AT SKYLIGHT WELL
C205 EXIST. PLASTER CLG CONTAIN ASBESTOS SPRAYED STIPPLE FINISH
C206 INSTALL PLASTER SOFFFIT & FASCIA @ DROPPED CLG
C207 REMOVE SKYLIGHT PATCH OPENING
C208 REMOVE PLASTER CLG & MTL LATH SYSTEM @ STRUCTURE
C209 INFILL AT CLG STORAGE AREA MEZZANINES W/ 1 HR ENCLOSURES
C210 PROVIDE PLASTER CEILING

GWB

C301 REPLACE GWB CLG.
C302 PATCH AND REPAIR GWB CLG.
C303 REPAINT GWB CLG.
C304 PROVIDE GWB CEILING
C305 REPAIR CRACK AT GWB CLG.
C306 REPAINT SKYLIGHT WELL

CEILING PANELS

C401 REPLACE CEILING PANELS
C402 PATCH & REPAIR CLG. PNLS
C403 REPAINT CEILING PNLS

EXPOSED STRUCTURE

C501 PAINT EXPOSED STL STRUCT. & DECK
C502 PAINT EXPOSED ED BEAMS
C503 REFINISH EXPOSED WD PLANKS, GLULAM BEAMS, COLUMN, AND BASE
C504 REFINISH GLULAM BEAMS
C506 EXIST. CEMENT FIBER DECK EXPOSED UNPAINTED W/ BULBTEES
C507 PAINT EXPOSED HVAC/MECH/ELEC. PIPING CONDUIT
C508 PAINT CONC. CLG.

CONCRETE

C601	PAINT EXPOSED CONC. STRUCT.

METAL PANEL

C701	REPLACE 12 X 12 METAL PANEL CLG.

METAL PANEL

C702	REPLACE 12 X 12 METAL PANEL CEILING ELEVATOR
E1	CAB SIDE NON-COMPLAINT
E2	CONTROLS ARE TOO HIGH
E3	FLOOR LEVEL NEEDS ELEVATOR

ATTACHMENTS

ACOUSTICAL TREATMENTS
REPLACE 4 X 8 TECTUM PANELS ON WALLS

WOOD TRIM

A101	REPLACE WOOD TRIM
A102	REPAIR WOOD TRIM
A103	REFINISH WOOD TRIM
A104	REPAINT WOOD TRIM
A105	REFINISH WOOD SEAT
A106	REFINISH WD GUARD RAIL 2 X 8
A107	PAINT HVAC GRILLE

VISUAL DISPLAY SURFACES: CHALK/TACK/AND FRAME

A201	REPLACE CHALK AND FRAME
A202	REPAIR CHALK AND TACK AND METAL FRAME
A203	REPAIR CHALK AND TACK AND WOOD FRAME
A204	PAINT TACK BOARDS AND FRAME
A205	REPLACE TACK AND FRAME
A206	REPLACE TACK, REMOVE & REINSTALL WD TRIM
A207	REPLACE TACK W/MTL FRAME
A208	REPLACE CHALK & MTL FRAME
A209	REPLACE CHALK, REMOVE & REINSTALL
A210	PAINT TACK BD. TRM
A211	PAINT WOOD TACK STRIP
A212	REPAINT TACK BD
A213	STRIP PAINT FROM ALUM CH & TACK BDS.
VD214	REPLACE/PROVIDE EXISTING CHALK/WHITE/TACK BDS & PROVIDE TWO – 8'LONG WHITE BOARDS & FOUR-4' LONG TACK BOARDS. CHALKBOARDS ARE REMOVED PER HAZMAT REPORT; PATCH PLASTER AT WHERE CHALKBOARDS ARE REMOVED IN 1892 AND 1922 BUILDING CLASSROOMS.
VD215	REPLACE/PROVIDE EXISTING WHITE/TACK BDS & PROVIDE ONE – 4'LONG WHITE BOARD & ONE – 4' LONG TACK BD

VD216 REPLACE/PROVIDE ALL EXISTING TACK BDS & DISPLAY CASES & PROVIDE TWO'8' LONG TACKBOARDS
& 1 DISPLAY CASE

SPEAKER/CLOCK

A301 REPLACE SPEAKER/CLOCK
A302 PROVIDE SPEAKER/CLOCK
A303 NO SPEAKER
A304 REPLACE CLOCK

FIRE EXTINGUISHER & EXIT SIGNAGE (NOTE: LOWELL HIGH SCHOOL REPLACE ALL EXTINGUISHERS & CABINETS TYP EVEN IF NOTES NOT INCLUDED ON SPREADSHEET).

A401 REPLACE FIRE EXTINGUISHER ONLY
A402 REPLACE FIRE EXTINGUISHER AND CABINETS
A403 ADD FIRE EXTINGUISHER
A404 EXIT SIGNS NOT ILLUMINATED
A405 NO EXIT SIGNS PRESENT
A406 REPLACE EXIT SIGN
A407 PAINT FIRE EXT. CABINET
A408 REPLACE WIRE GLASS IN FIRE EXT. CABINET

MOVABLE PARTITIONS

A501 REPLACE OPERABLE PARTITION
A502 REPLACE DIVIDER SCREEN
A503 ADJUST AS REQUIRED
A504 REPAIR AND REFINISH

GYM EQUIPMENT

A601 REPLACE BLEACHERS
A602 ADJUST BLEACHERS
A603 REPAIR SEATING
A604 REFINISH SEATING

CASEWORK AND EQUIPMENT

CASEWORK

CW001 REPLACE UNIT VENTILATOR AND INTEGRAL STORAGE UNIT
CW101 REPLACE CASEWORK (PLASTIC LAMINATE)
CW102 REPAIR CASEWORK
CW103 REPLACE COUNTER TOP ONLY (FINISH)
CW104 REFINISH CASEWORK
CW105 REPAINT CASEWORK
CW106 REPLACE HARDWARE
CW107 PROVIDE SHELVES
CW108 RECONFIGURE FOR HCP AT SINK
CW109 REPAINT SHELVING
CW110 CLEAN BASE & WALL CABINET ADJUSTINGS

CW111	CASEWORK NT HCP ACCESSIBLE - REWORK
CW112	ADD LOCKS TO CASEWORK
CW113	REPLACE CASEWORK AND COUNTERTOP/SINK
CW114	REPLACE CASEWORK AND COUNTERTOP AND WALL CABINET
CW115	KITCHEN AREA- COUNTER/SINK/ STOVE/ DW/ REF NOT ACCESSIBLE
CW116	REWORK SHELVING FOR ACCESSIBILITY
CW117	REPLACE WOOD CASEWORK W/ WOOD (DARK STAIN CASEWORK IN CONFIGURATION TO MATCH EXISTING EXCEPT NO GLASS @ DOORS, ALL SOLID FRONTS.
CW118	REPLACE LAB CASEWORK

WARDROBES

CW201	REPLACE WARDROBES
CW202	REPAIR WARDROBES
CW203	REFINISH WARDROBES AND REPLACE HARDWARE WITH HCP
CW204	REPAINT WARDROBES
CW206	REPLACE WARDROBES
CW207	REPLACE WARDROBES DOOR MECHANISMS
CW208	ADJUST WARDROBES DOOR MECHANISMS
CW209	MAKE CLOSET HCP ACCESSIBLE

STORAGE UNITS

CW301	REFINISH STORAGE UNITS - WD (MAT)
CW302	PAINT STORAGE UNITS - MTL
CW302A	PAINT STORAGE UNITS - WD
CW303	REPAINT WALL STATION CABINET WITH CUBBY
CW304	REPLACE STORAGE UNITS (MAT)
CW305	REPLACE STORAGE UNITS HARDWARE

DISPLAY CASES

CW401	REPLACE DISPLAY CASE
CW402	REPAIR DISPLAY CASE
CW403	REFINISH DISPLAY CASE
CW404	REPLACE HARDWARE
CW405	PAINT DISPLAY CASE
CW406	REPLACE GLASS DOORS AT TEMP. GLAZED DOORS

LOCKERS:

L101	REPAINT EXISTING SINGLE TIER LOCKERS WITH ELECTROSTATIC PAINT, REPLACE 20% OF LOCKERS NOTE: KEY NOTE NOT ON SPREADSHEET, REFER TO PLANS FOR LOCKERS

SIGNAGE:

REPLACE ALL CODE AND DIRECTIONAL SIGNAGE WITH CODE COMPLIANT BRAILLE SIGNAGE
REPLACE ALL EXTERIOR SIGNAGE

LAB EQUIPMENT

CW501 REPLACE LAB TABLES
CW502 PROVDE SCIENCE LAB HCP WORK STATIONS
CW503 REPLACE SCIENCE CASEWORK
CW504 REPLACE SCIENCE DEMONSTRATION STATION
CW505 SCIENCE DEMONSTRATION STATION NOT ACCESSIBLE

BATHROOMS/FIXTURES

FIXTURES - HCP COMP.

BF101 REPLACE SINK (HCP)
BF102 REPLACE TOILETS (HCP)
BF103 REPLACE URINAL (HCP)
BF104 REPLACE DF
BF105 GANG WASH STATION NOT HP ACCESSIBLE
BF106 REMOVE URINAL
BF107 REMOVE SINK

FIXTURES

BF201 REPLACE SINK (BROKEN)
BF202 REPLACE TOILETS (HCP)
BF203 REPLACE URINAL (BROKEN)
BF204 REPLACE DF

FLOOR DRAINS

BF301 REPLACE FLOOR DRAIN

PARTITONS

BF401 REPLACE TOILET PARTITON (HCP)
BF402 REPLACE TOILET PARTITON (BROKEN)
BF403 REWORK TOILET PARTITIONS FOR HP COMPLIANCE
BF404 REPAIR TOILET PARTITONS
BF405 PAINT TOILET PARTITON

MISC.

BF501 PROVIDE NEW HC COMPLIANT TOILET ROOM ACCESSORIES
BF502 GRAB BARS NOT PROVIDED
BF503 DOOR SWINGS INTO FREE AREA
BF504 TOILET ROOM UNACCEPTABLE
BF505 CLEAR DIMENSION BETWEEN FIXTURES INADEQUATE
BF506 REWORK BATHROOM FOR HP COMPLIANCE
BF507 SHOWER NO HCP ACCESSIBLE
BF508 PROVIDE HCP HOME KITCHEN

TOILET ACCESSORIES (TYPICAL ALL BATHROOMS LOWELL HIGH SCHOOL)

BTA106 REPLACE ALL TOILET ACCESSORIES INCLUDING BUT NOT LIMITED TO: MIRRORS, GRAB BARS, PAPER TOWEL DISPENSERS, SOAP DISPENSERS, SANITARY NAPKIN DISPENSERS, TRASH DISPENSERS.

STAIRS:

TREADS AND RISERS

S101	TREADS INSUFFICIENT
S102	RISER INSUFFICENT
S103	INFILL REQUIRED
S104	PROIVDE NON-SLIP SURFACE
S105	PAINT UNDERSIDE OF STAIR
S106	REPLACE RUBBER TREADS AND RISERS
S107	REPLACE HANDRAIL
S108	REFINISH WOOD TREADS AND RISERS
S109	REPAIR BROKEN TERRAZZO NOSING
S110	RISE/RUN ILLEGAL

STAIR REPLACEMENT

S111	REPLACE ENTIRE STAIR W/ CONCRETE FILLED METAL PAN STAIRS AND INTERMEDIATE LANDINGS IN SIMILAR CONFIGURATION TO EXIST. PROVIDE METAL PAINTING HANDRAILS @ EACH SIDE AT 2'-10" AFF. PROVIDE METAL PAINTING RAILINGS/GUARDRAILS @ 3'-6" AFF W/ VERTICAL PICKETS @ 4" O.C. MAX. PROVIDE RUBBER DISK FLOORING AT ALL TREADS, RISERS AND LANDINGS. EXISTING FLOOR STRUCTURE TO REMAIN; INSTALL NEW RUBBER DISK FLOORING.

OTHER

S201	HANDRAILS OR GUARDRAILS NON-COMPLIANT
S202	REPAINT HANDRAILS OR GUARDRAILS
S203	LANDING INSUFFICIENT
S204	REPAIR LANDING
S205	INSUFFICIENT RAIL EXTENTION
S206	PROVIDE WALL MOUNTED HANDRAIL
S207	WALL MOUNTED HANDRAIL NON-COMPLIANT
S208	RE-PAINT STEEL LADDER AND CASE
S209	NO HANDRAILS PRESENT
S210	REWORK NEWEL MTL POST DOOR ADDED HEIGHT OF HANDRAIL
S211	REPAIR/REPLACE SKYLIGHTS
S212	REMOVE OFFICE CUBICLE (NOT ACCESSIBLE)
S213	NON HC COMPLIANT UNIT KITCHEN
S214	REPLACE OFFICE FURNITURE METAL FLOOR MTD PARTITIONS
S215	REPLACE S.S. CORNER GUARD
S216	FIRE PULL STATION NOT ACCESSIBLE
S217	REPLACE GUARDRAIL AT AREAWAY
S218	REPLACE CONC. STAIR

RAMP

R101	SLOPE NON-COMPLIANT
R102	HANDRAILS, NON-COMPLIANT
R103	REPAINT HANDRAILS
R104	LANDING NON-COMPLIANT

R105	PROVIDE NON-SLIP SURFACE
R106	NO HANDRAILS
R107	ADD NEW RAMP TO MAKE SPACE HC ACCESSIBLE

HARDWARE:

H101	REPLACE HARDWARE (HCP COMPLIANCE)
H102	ADD PANIC DEVICESER
H103	ADD DOOR CLOSURE
H104	UPDATE BOILER ROOM DOOR HARDWARE
H105	TACTILE WARNING HARDWARE REQUIRED
H106	REPLACE COMPLETE HARDWARE SET INCLUDING BUT NOT LIMITED TO; HINGES, LOCKSET (LEVER HANDLES), LATCHES, CLOSERS, KICKPLATES, WALL/FLOOR STOPS, PANIC DEVICES, THRESHOLDS,TRANSITION STRIPS.
H107	POWER OPERATORWITH SURFACE MOUNTED CONDUIT

THERMAL & MOISTURE PROTECTION

TM101	SEALANT AT WINDOW
TM102	CAULKING AT WINDOW
TM103	SEALANT AT DOOR
TM104	CAULKING AT DOOR
TM105	RECAULK AT HC
TM 106	ADD C.J.'S

ASBESTOS

AS101	EXPOSED PIPE INSUL-POSSIBLE ASBESTOS
AS102	REPLACE VAT IN FLOOR
AS103	REMOVE POSSIBLE ASBESTOS FIBREBOARD

MECHANICAL:

M101	REPLACE CEILING FAN
M102	PROVIDE SEPARATE CONTROLS FOR GANG SHOWER
M103	REMOVE AND REPLACE KILN AND PROVIDE SEPARATE ROOM W/ EXHAUST
M104	REPLACE UV
M105	REPLACE UV MECHANICAL LOUVER
M106	REPLACE KITCHEN HOOD
M107	PAINT EXHAUST LOUVER
M108	REPLACE EXHSAUT LOUVER
M109	REPLACE ELECTRICAL HEAT COLL.
M110	REPLACE FIN TUBE RADIATION COVER
M111	REPLACE METAL WALL VENT
M112	REPLACE CUH

ELECTRICAL

E100	REPLACE 2 X 4 LIGHT LENS
E101	REPLACE 1 X 4 LIGHT LENS

STRUCTURAL

ST101	STEEL BEAM RUSTED BELOW WINDOW
ST102	PAINT STEEL BEAM

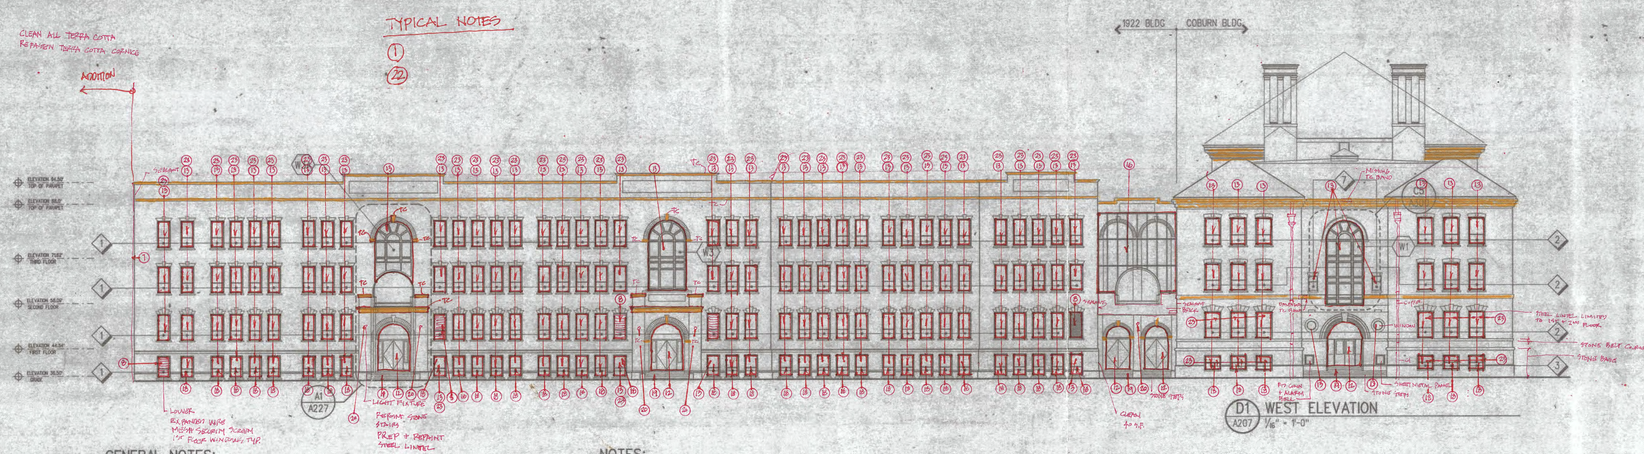
BASE REPAIR KEY NOTES
GENERAL NOTES FOR ELEVATIONS - ALL BUILDINGS

2/16/17

PE # 67150.00

GENERAL NOTES:

1. **CLEAN BRICK MASONRY VENEER**
2. **REPLACE BRICK MASONRY VENEER**
3. **REPLACE BRICK HEADER**
4. **REPLACE BRICK MASONRY VENEER**
5. **REPLACE CEMENTATIOUS PANELS**
6. **REPLACE PLASTIC FACED PLYWOOD PANELS**
7. **REPLACE SEALANT**
8. **REPLACE LOUVERS**
9. **REPLACE ALUMINUM DOOR + FRAME**
10. **REPLACE ALUMINUM DOOR + FRAME + SIDELIGHT + TRANSOM**
11. **REPLACE SOFFIT W/ EXTERIOR CEMENT BOARD FINISH SYSTEM + CR METAL FRAMING**
12. **REPLACE ALUMINUM DOOR + FRAME + ENTRY**
13. **REPLACE ALUMINUM WINDOWS**
14. **REPLACE BROKEN BRICK**
15. **REPLACE BROKEN PRECAST CONCRETE CAPSTONE**
16. **REPLACE ALUMINUM STOREFRONT**
17. **REMOVE EFFLOURESCENCE**
18. **REPLACE STELL SECURITY SCREEN**
19. **REPOINT STONE STEPS**
20. **NEW LIGHT FIXTURE**
21. **REPLACE EXIT LIGHT**
22. **CLEAN TERRACOTTA MOLDINGS, CORNICES + TRIM**
23. **SCRAPE/ PREP/ PAINT STEEL LINTEL**
24. **REPLACE SHEETMETAL PANEL W/ TERRACOTTA**
25. **SCRAP/ PREP/ PAINT METAL CORNICE**
26. **REPOINT BRICK MASONARY**
27. **REPLACE OVERHEAD COILING DOOR**
28. **REPLACE WOOD DOOR + FRAME**
29. **REPLACE POLY-CARBONATE GLAZING**
30. **REPLACE BROKEN INSULATED GLASS UNIT**
31. **REPLACE BRIDGE SOFFIT W/ INSULATED ALUMINUM PANELS ON LIGHT GAGE METAL FRAMING**



D1 WEST ELEVATION
A207 1/16" = 1'-0"

GENERAL NOTES:

A. EXISTING WINDOWS SHALL REMAIN, UNO.
B. REMOVE EXISTING GLASS BLOCK, ALUMINUM PANEL, ETC. AND PROVIDE NEW HISTORIC THERMAL FIXED WINDOW ASSEMBLY - WINDOW TYPE W1, W2, W2a, W3 & W3a.

NOTES:

1. 3'-0"H.x4'-0"W. SINGLE HUNG SASH TO RECEIVE BALANCE MECHANISM
2. 3'-0"H.x5'-0"W. SINGLE HUNG SASH TO RECEIVE BALANCE MECHANISM
3. 2'-0"H.x5'-0"W. SINGLE HUNG SASH TO RECEIVE BALANCE MECHANISM
4. 3'-0"H.x4'-6"W. SINGLE HUNG SASH TO RECEIVE BALANCE MECHANISM
5. 2'-0"H.x9'-6"W. SINGLE HUNG SASH TO RECEIVE BALANCE MECHANISM
6. 2'-0"H.x4'-0"W. SINGLE HUNG SASH TO RECEIVE BALANCE MECHANISM
7. 3'-0"H.x3'-0"W. SINGLE HUNG SASH TO RECEIVE BALANCE MECHANISM

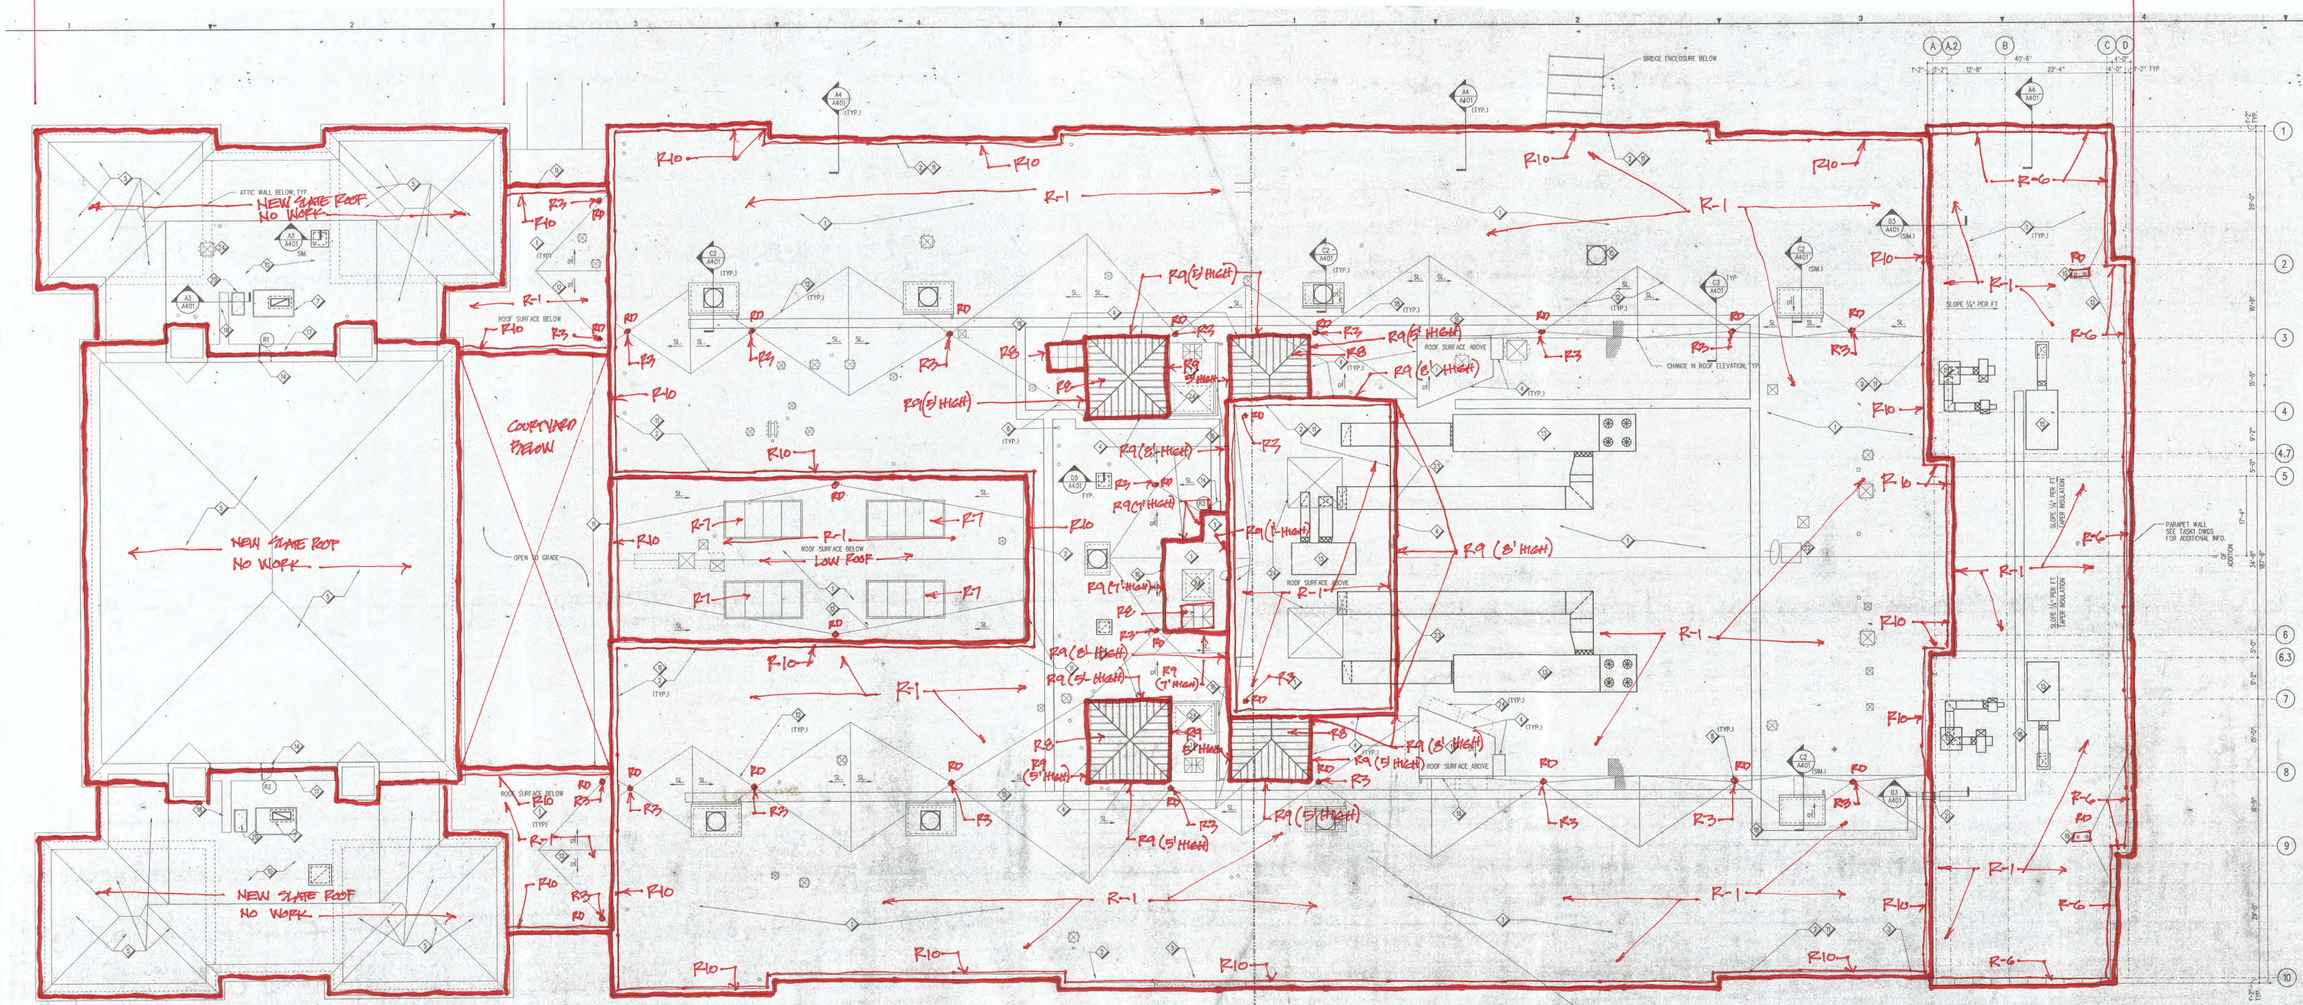
COBURN

KOULOHEARS



RAL NOTES (COBURN/1922 BUILDING)

VIDE AND INSTALL MODIFIED BITUMEN ROOF MEMBRANE AND RIGID INSULATION
ER ENTIRE ROOF AREA, UNO.

FY POINT ALL EXPOSED MASONRY WALLS ON ROOF AS REQUIRED
OR TO COVERING WITH CEMENT PARGE COAT.

ORDINATE NEW ROOF PENETRATIONS W/ PLUMBING & MECHANICAL DWGS., TYP.

E OUT CAULKING AND MORTAR FROM TERRA-COTTA COPING. INSTALL NEW JOINT
ISHING & SEALANT, SEE RESTORATION ELEVATIONS FOR ADDITIONAL INFORMATION.

AN AND PAINT ALL EXPOSED METAL SURFACES TO MATCH EXISTING PAINTED METAL.

ORDINATE ADDITIONAL WORK INFORMATION ON ROOF AREA W/ RESTORATION ELEVATIONS, TYP.

PARTIAL ROOF PLAN
1/16" = 1'-0"

NOTES (COBURN/1922 BUILDING)

1. ROOF MEMBRANE AND RIGID INSULATION OVER EXISTING SLOPED STRUCTURE
2. SAVE EXISTING PARAPET IN PLACE, SPOT POINT MORTAR JOINTS AS REQUIRED PRIOR TO COVERING WITH CEMENT PARGE COAT.
3. REBUILD MASONRY PARAPET USING ORIGINAL TERRA-COTTA COPING PIECES SALVAGED DURING DEMOLITION OPERATIONS, COORDINATE EXTENT OF PARAPET WORK WITH RESTORATION ELEVATION DWGS, TYP.
4. EXPOSED MASONRY WALLS.
5. EXISTING SLATE ROOF, RECOAT WITH LIQUID COATING
6. ROOF PENETRATION , TYP.
7. INSTALL MECHANICAL VENT IN LOCATION WHERE SKYLIGHT WAS REMOVED REFER TO SIM CURB DETAIL A3/A401 AT ROOF HATCH
8. PROVIDE ROOF DRAIN TO MATCH EXISTING. VIF EXISTING DRAIN SIZE & DRAIN LEADER PRIOR TO REMOVAL OF EXISTING.
9. NOT USED
10. RECOAT COPPER TERNE ROOF WITH LIQUID COATING.
11. PARAPET WALL W/ TERRA-COTTA COPING.
12. TAPERED INSULATION CRICKET, PROVIDE POSITIVE SLOPE TO DRAINS, TYP.
13. MECHANICAL EQUIPMENT ON RAISED STEEL SUPPORT REFER TO DETAIL D1/A401
14. DOOR AND FRAME, REFER TO DOOR SCHEDULE.
15. MECHANICAL EQUIPMENT ON PREFABRICATED ROOF CURB, REFER TO D5/A401
16. NEW PAINTED METAL GUTTER AND DOWNSPOUT, REFER TO SIM DETAIL C2/A401 TYP.
17. INSTALL 2'-0"± WALKWAY PROTECTION BOARDS @ DRIP LINE OF ROOF AS SHOWN ON DWGS.
18. INSTALL 2'-0" WALKWAY PROTECTION BOARD PATH AS INDICATED.
19. ROOF DRAIN REFER TO DETAIL D2/A401.
20. 30"x54" ROOF HATCH & LADDER IN EXISTING HATCH OPENING REFER TO A3/A401.
21. PARAPET LADDER REFER TO DETAIL B3/A401
22. EXISTING DISH ANTENNA ON ROOF PROTECTION BOARD
23. DUCT PENETRATION IN EXISTING MASONRY WALL, COORD. W/ MECHANICAL AND STRUCTURAL DWGS.
24. EXPOSED METAL SURFACE TO RECEIVE PAINT FINISH

LOWELL HIGH SCHOOL
BASE REPAIR KEY NOTES
LORD AND FIELDHOUSE BUILDINGS

11/03/16

PE # 67150.00

GENERAL NOTES:

1. **GENERAL NOTES APPLY TO ALL CONDITIONS NOTED BELOW EVEN IF NOT NOTED ON BASE REPAIR SPREADSHEETS.**
2. **REFER TO EXISTING CONDITIONS / BASE REPAIR REPORTS FOR CONSULTANT SCOPE.**
3. **ALL WALLS ARE TO BE REPAINTED AT A MINIMUM.**
4. **REMOVE ONE SIDE OF WALL TO INSTALL NEW PIPING AND PLUMBING FIXTURE CARRIERS.**
5. **INSTALL NEW TOILET ROOM FIXTURES AND ACCESSORIES THROUGHOUT. REPLACE ALL TOILET PARTITIONS IN TOILET ROOMS THAT ARE TO BE RECONFIGURED AS INDICATED ON DRAWINGS.**
6. **REPLACE ALL CEILINGS. AT DEMOUNTABLE WALL LOCATIONS (W1501) PROVIDE LIGHT GAUGE FRAMING SUPPORT, 24" O.C., FROM TOP OF DEMOUNTABLE WALL TO UNDERSIDE OF FLOOR ABOVE IN ORDER TO BRACE WALLS.**
    a. **LORD BUILDING FLOOR TO FLOOR HEIGHTS FOR REFERENCE:**
        i. **L1 18'-0"**
        ii. **L2 13'-4"**
        iii. **L3 13'-4"**
7. **REPAINT EXISTING SINGLE TIER LOCKERS WITH ELECTROSTATIC PAINT, REPLACE 20% OF LOCKERS.**
8. **REPLACE ALL CODE AND DIRECTIONAL SIGNAGE WITH CODE COMPLIANT BRAILLE SIGNAGE**
9. **REPLACE GYM FLOOR WITH SYNTHETIC GYM FLOOR SURFACE. ASSUME SAME MARKINGS AS SHOWN ON PLANS.**
10. **PROVIDE NEW WINDOW TREATMENTS (MECHO SHADE 5% OPENENSS) AT ALL EXTERNAL WINDOWS AND STOREFRONT GLAZING. SHADES ARE NOT NEEDED IF STOREFRONT IS CONTIGUOUS WITH PUBLIC CORRIDORS, STAIRS, AND CORRIDORS.**
11. **AT ALL EXTERNAL DOORS PROVIDE NEW HARDWARE AND ONE PAIR AT EACH ENTRY TO BE EQUIPED WITH CARD READER ACCESS AND PUSH PLATE ACTIVATION FOR AUTO ASSIST DOOR OPERATORS FOR ADA ACCESS.**
12. **AT GROUP SHOWERS, PROVIDE INDIVIDUAL PARTITIONS AND CURTAINS FOR SHOWER STALLS. AT OPEN SHOWER AREAS – RECONFIGURE FOR 5 INDIVIDUAL SHOWERS – 5' WIDE FOR HANDICAP ACCESS.**
13. **AT ALL CLASSROOMS, LABS, AND CONFERENCE ROOMS – PROVIDE VISUAL DISPLAY SURFACES 2 (TWO) – 8' LONG WHITE BOARDS AND 4 (FOUR) 4' LONG TACK BOARDS. ANY EXISTING CHALKBOARDS ARE TO BE ABATED PER HAZMAT REPORT.**
14. **ALL STAIRS –**
    a. **FIELD HOUSE:**
        i. **REPAINT ALL CONCRETE STAIR TREADS AND REPLACE ALL ABRASIVE NOSINGS**
        ii. **REPAINT ALL METAL STAIR STRINGERS**
        iii. **REPLACE EXISTING ALUMINUM HANDRAIL WITH COMPLIANT ALUMINUM HANDRAIL 34" AFF W/ LANDING EXTENTIONS**

iv. **REPLACE EXISTING ALUMINUM GUARDRAIL WITH COMPLIANT ALUMINUM GUARDRAIL 42" AFF W/ VERTICAL POSTS < 4" OC.**

b. **LORD BUILDING**

i. **REPLACE ALL RUBBER STAIR TREADS, RISERS, AND NOSINGS. REFINISH EXISTING VCT AT LANDINGS UNLESS OTHERWISE NOTED.**

ii. **REPAINT ALL METAL STAIR STRINGERS**

iii. **REUSE EXISTING ALUMINUM HANDRAIL.**

iv. **REPLACE EXISTING ALUMINUM GUARDRAIL WITH COMPLIANT ALUMINUM GUARDRAIL 42" AFF W/ VERITCAL POSTS <4" OC.**

15. **PROVIDE 1 BENCHTOP FUMEHOOD AT EACH SCIENCE LAB**

FLOOR:

VCT/VINYL SHEET

F100	REPLACE VCT/VINYL SHEET OR CARPET W/ BIOBASED TILE.
F101	REPLACE VAT
F102	PATCH REPAIR VCT
F103	CLEAN AND WAX VCT/SHEET VINYL
F104	REPLACE TRANSITION STRIP
F105	CLEAN SHEET VINYL FLOORING
F106	REPLACE RADIAL RUBBER
F107	REPLACE SHEET VINYL FLOORING TREADS AND RISERS
F108	REPLACE WOOD FLOOR W/ BIOBASED TILE. REMOVE WOOD FLOOR, FASTEN ROUGH SAWN WOOD, INSTALL ROSIN PAER & E/4" T&G PLYWOOD, AND BIOBASED TILE. TAPER FLOORING AT THRESHOLD.
F109	REPLACE CARPET W/ BIOBASED TILE. REMOVE WOOD FLOOR OR PLYWOOD AS OCCURS, FASTEN ROUGH SAWN WOOD, INSTALL ROSIN PAPER & E/4" T&G PLYWOOD, AND BIOBASED TILE. TAPER FLOORING DOOR AT THRESHOLD.
F110	CLEAN SHEET VINYL
F111	REPLACE CARPET W/ BIOBASED TILE.
F112	REPLACE RESILIENT DANCE FLOOR
F113	REPLACE SHEET VINYL FLOORING W/ LINOLEUM.
F114	INSTALL BIOBASED TILE
F115	REPLACE CERAMIC TILE AND INSTALL BIOBASED TILE. REMOVE WOOD FLOOR OR PLYWOOD AS OCCURS, FASTEN ROUGH SAWN WOOD, INSTALL ROSIN PAPER & E/4" T&G PLYWOOD, AND BIOBASED TILE. TAPER FLOORING DOOR AT THRESHOLD.

CARPET

F201	REPLACE CARPET
F202	CLEAN AND SHAMPOO CPT

WOOD

F301	REPLACE WOOD FLOOR
F302	PATCH AND REPAIR WOOD FLOOR
F303	REFINISH WOOD FLOOR
F304	POWER SAND AND REFINISH WOOD FLOOR
F307	REPAIR STRIP WD. FLOORING AND REFINISH

CONCRETE

F401	REPLACE CONC. FLOOR
F402	PATCH AND REPAIR CONC. FLOOR
F403	LEVEL CONC. FLOOR
F404	REPLACE CONC. FLOOR
F405	REPAIR CONCRETE FLOOR
F406	CLEAN AND RESEAL CONCRETE FLOOR
F407	REPAINT CONC. FLOOR
F408	PATCH HOLES IN CONC. FLOOR FROM REMOVAL OF MEP PIPES

CERAMIC TILE

F501	REPLACE CERAMIC TILE
F502	PATCH AND REPAIR CERAMIC TILE
F503	CLEAN CERAMIC TILE
F504	REGROUT FLOOR TO BASE CERAMIC TILE
F505	REPLACE CARPET W/ CERAMIC TILE

TERRAZZO :

F601	REPLACE TERRAZZO
F602	REPLACE METAL TRIM IN TERRAZZO
F603	PATCH AND REPAIR CRACKS IN TERRAZZO
F604	CLEAN AND WAX TERRAZZO
F605	CLEAN QUARRY TILE/STONE
F606	REPAIR TERRAZZO BASE
F607	CLEAN/POLISH TERRAZZO FLOOR

EPOXY

F701	REPLACE EPOXY FLOORING
F702	REPAIR EPOXY FLOORING AND BASE
F703	CLEAN EPOXY FLOORING
F704	INSTALL EPOXY FLOORING

ENTRY MAT

F801	REPLACE ENTRY MAT
F802	REPLACE RECESSED ENTRY MAT
F803	REPLACE RECESSED ENTRY MAT FRAME

MARBLE

F1001	CLEAN MARBLE FLOOR

BASE:

VINYL

B101	REPLACE OR INSTALL VINYL BASE
B102	REFASTEN HEAVY DUTY VINYL BASE BOARD
B103	CLEAN QUARRY TILE BASE

B105 CLEAN TILE BASE
B106 REPLACE ATHLETIC BASE
B107 CLEAN VINYL BASE
B108 REPLACE VCT W/ LINOLEUM

WOOD

B201 REPLACE OR INSTALL WOOD BASE
B202 REFINISH WOOD BASE
B203 REPAINT WOOD BASE

TILE

B301 REPLACE TILE BASE
B302 PATCH AND REPAIR TILE BASE
B303 REPAINT CMU WALL

TERRAZZO

B401 REPLACE TERRAZZO
B402 PATCH AND REAPAIR TERRAZO
B403 CLEAN/POLISH TERRAZZO

GLAZED CMU

B501 CLEAN GLAZED CMU BASE
B502 PATCH GLAZED CMU

CONCRETE

B601 REPAINT CONCRETE BASE

MARBLE

B701 CLEAN MARBLE BASE

STEEL

B801 PAINT STEEL BASE

WALLS:

WALL PLASTER

W001 REMOVE WOOD PANELED WALLS W/ HOMOSOTE ABOVE ON METAL STUDS & REPLACE PLASTER W/GWB IN METAL STUDS
W101 REPLACE PLASTER WALL
W102 PATCH &REPAIR PLASTER WALL
W103 REPAINT PLASTER WALL
W104 REPLACE VINYL WALLCOVERING ON PLASTER WALL
W105 INSTALL NEW PLASTER WALL
W106 REMOVE WOOD PANELING
W107 CLEAN & REPAIR C.T. ON PLASTER

GWB

W201 REPLACE GWB WALL
W202 PATCH AND REPAIR GWB WALL
W203 REPAINT GWB WALL
W204 REPAIR CRACK IN GWB WALL
W205 PAINT AND PATCH COLUMN
W206 RECAULK AT GYPSUM BOARD AND TILE CONNECTION
W207 INSTALL 2'-0" W. X 4'-0" L. 2-HR. RATED SHAFTWALL CHASE; MODIFY FRAMING AS REQUIRED. PROVIDED RATED SHAFTBOTTOM AT 1ST FLR. FRAMING NOTE: CHASE GRAPHIC NOT SHOWN ON PLAN.
W208 REMOVE ONE SIDE OF WALL TO INSTALL NEW PIPING AND PLUMBING FIXTURE CARRIERS. INSTALL NEW WALL TO MATCH EXISTING NOTE: THIS CONDITION OCCURS AT ALL PLUMBING FIXTURES AND PIPING EVEN IF NOT NOTED ON SPREADSHEET.
W209 REMOVE WALL PAPER. PATCH OR SKIM COAT AND PAINT GWB

CMU

W301 REPLACE CMU WALL
W302 PATCH AND REPAIR CMU WALL
W303 REPAINT CMU WALL
W304 REPOINT CMU WALL
W305 EXTEND CMU WALL TO UNDERSIDE OF STRUCTURE
W306 FIRESTOP AT TOP OF CMU WALL
W307 PAINT UNFINISHED CMU
W308 INFILL WINDOW OPEING AT CMU
W309 INSTALL CMU
W310 EXPOSED CMU

BRICK

W401 REPLACE BRICK WALL
W402 PATCH AND REPAIR BRICK WALL
W403 REPAINT BRICK WALL
W404 REPOINT BRICK WALL
W405 CLEAN BRICK
W406 CLEAN GLASS BLOCK

GLAZED CMU

W501 REPLACE GLAZED CMU
W502 PATCH AND REPAIR GLAZED CMU
W503 REPOINT GLAZED CMU
W504 CLEAN GLAZED CMU
W505 CLEAN 2 X 2 WALL TILE

WOOD PANEL

W601 REPLACE WOOD PANEL
W602 PATCH AND REPAIR WOOD PANEL
W603 REPAINT WOOD PANEL
W604 REFINISH WOOD PANEL

W605	PAINT PLYWOOD SHEATHING
W606	REPAIR VERTICAL
W607	PAINT WOOD VALANCE
W608	REPAINT TACK SURFACE
W609	REPLACE PEG BOARD
W610	REMOVE WOOD PANEL AND PLASTER WALL
W611	REMOVE WOOD PANEL
W612	REMOVE HOMOSOTE
W613	PROVIDE NEW WOOD PANELING

WOOD WINDOW WALL

W701	REPLACE FIN WOOD WINDOW WALL
W702	REPAIR FIN WOOD WINDOW WALL
W703	REFINISH FIN WOOD WINDOW WALL
W704	REPAINT FIN WOOD WINDOW WALL
W705	REPAINT METAL WINDOW WALL

WOOD CHAIRRAIL AND WAINSCOT

W801	REPLACE WD WAINSCOT
W802	REPAIR WD WAINSCOT
W803	REFINISH WD PNL WAINSCOT
W804	REPAINT WD WAINSCOT
W805	REPAINT ED CHAIRRAIL
W806	REFINISH WD CHAIRAIL
W807	REWORK WD CHAIRRAIL

WAINSCOT

W901	REPLACE CERAMIC TILE WAINSCOT
W902	REPAIR CERAMIC TILE WAINSCOT
W903	REFINISH CERAMIC TILE WAINSCOT
W904	REPAINT CERAMIC TILE WAINSCOT
W905	CLEAN CERAMIC TILE WAINSCOT/WALL
W906	REPLACE PLAS. LAM. CHAIRAIL

CERAMIC TILE

W1001	PATCH CT WALL
W1002	CLEAN CT WALL

CONCRETE

W1101	REPAINT CONC. WALL
W1102	PAINT UNFINISHED CONC. WALL
W1103	REPAIR CRACK CONC. FOUND

CLAY TILE

W1202	REPAINT CLAY TILE

METAL WALL PANEL

W1301	CLEAN METAL WALL PANEL SYSTEM
W1302	REPAINT STEEL COLUMN
W1401	REPAIR CONC. FOUNDATION
W1501	REFINISH DEMOUNTABLE PARTITION AND BRACE FROM TOP OF PARTITIION @ CEILING TO DECK W/ LIGHT GUAGE FRAMING.

WINDOWS:

METAL WINDOWS

WD001	REMOVE MANUAL OPERATION SYSTEM
WD101	REPLACE MTL WINDOW
WD102	REGLAZE MTL WINDOW
WD103	RESEAL MTL WINDOW AT OPERABLE SASH
WD104	REPLACE WINDOW TRIM
WD105	REFINISH WOOD TRIM
WD106	REPLACE WINDOW HARDWARE
WD107	WINDOW NOT THERMALLY BROKEN
WD108	REFINISH METAL WINDOW
WD109	REPAINT MTL BORROWED LIGHT
WD110	REPLACE INSUL. PANEL
WD111	REMOVE & REPLACE WINDOW STOOL
WD113	REFINISH WOOD WINDOW SILL
WD114	REPLACE WINDOWS FRAMES AND SASHES AS INDICATED ON ELEVATIONS W/ ALUMINUM THERAMLLY BROKEN WINDOWS W/ LOW-GLAZING, INSECT SCREENS AND OPERABLE BOTTOM SASH (AWNING). WINDOW SHALL HAVE HISTORIC PATTERN (INTERNAL MUNTINS AND PROFILE SIMILAR TO 1922 BUILDING. REPLACE WINDOW TREATMENTS W/ MECHOSHADES (5% OPENNESS). REPLACE WINDOW STOOLS AND APRONS W/ SOLID SURFACE DARK COLOR STOOL & APRON. REPAIR & PAINT EXISTING WOOD TRIM AT 1892 & 1922 BUILDING.

WOOD WINDOWS

WD201	REPLACE WD WINDOW
WD202	REGLAZED WD WINDOW
WD203	RESEAL WD WINDOW
WD204	REPAINT WD WINDOW
WD205	REFINISH WD WINDOW
WD206	REPLACE WINDOW TRIM
WD207	REFINISH WINDOW TRIM
WD208	REPLACE WINDOW HARDWARE
WD209	REPLACE PARTING BEADS
WD210	REPLACE SCREEN
WD211	EX WINDOW WILL NOT CLOSE
WD212	HARDWARE MISSING
WD213	REPAINT WD WINDOW TRIM
WD214	REPLACE WD WINDOW SILL

WD215 REPLACE WD WINDOW WALL SYSTEM

GLASS BLOCK

WD401 REPLACE WINDOW & GLASS BLOCK SYSTEM

DOORS:

METAL DOOR AND FRAME

D101 REPLACE MTL DOOR AND FRAME
D102 REPAINT MTL DOOR AND FRAME
D103 REPLACE DOOR LIGHT AND STOPS
D104 REPAINT MTL DOOR
D108 REPLACE HM FRAME
D109 INSUFFICIENT HCP CLEAR W1401
D110 EGRESS DOORS ARE NOT REQUIRED 3'-0" WIDTH
D111 HM DOOR NEEDS LABEL RATING
D112 REPLACE DOOR LITE W/ WIRE GLASS
D113 REPLACE TRANSOM W/WIRE GLASS
D114 REWORK HM DOORS OR OPENINGS TO PROVIDE HCP ACCESSIBILITY
D115 REPLACE HM DOOR ONLY & REPAINT FRAME
D116 REPLACE ALUM. ENTRY W/ HM
D117 THRESHOLD NOT ACCESSIBLE
D118 PAINT HM WINDOW WALL
D119 PAINT HM FRAME

WOOD DOORS

D201 REPLACE WD DOOR AND FRAME
D202 REPLACE WD DOOR AND FRAME W/HM DOOR AND FRAME
D203 REPLACE WD DOOR ONLY W/ EXTERIOR HM DOOR
D204 REFINISH WD DOOR AND FRAME
D205 REPLACE DOOR LIGHTS
D206 UNEQUAL LEAFS ARE REQUIRED
D207 REPAINT WOOD DOOR
D208 REPAINT HM FRAME
D209 INSUFFICIENT HCP CLEARANCE
D210 REFINISH WD DOOR AND PAINT MTL FRAME AND REPLACE HARDWARE
D211 PAINT DUTCH BOTTOM
D212 REPLACE WD DOOR AND FRAME W/RATED WD DOOR AND FRAME
D213 REPLACE DOOR LIGHT W/1/4" WIRE GLASS
D214 REFINISH WD TRANSOM AND PAINT METAL FRAME
D215 REPLACE WOOD DOOR ONLY
D215A REPLACE WD REVERSE SWING & REWORK WOOD FRAME (DUTCHMAN)
D216 REMOVE WOOD DOOR AND FRAME
D217 REPLACE DUTCH DOOR
D219 REPLACE WOOD DOOR
D219A INCREASE HM DOOR FRAME OPENINGS FOR HC COMPLIANCE
D220 REPLACE WD & INSTALL HM RATED FRAME W/ WD TRIM TO MATCH

D221 REPLACE WD AND PAINT EXIST. HM FRAME
D222 REPLACE WOOD DOOR AND REFINISH WOOD FRAME
D223 REWORK WOOD DOORS/FRAMES OR OPENING TO PROVIDE HCP ACCESS
D224 BONDO, SAND & PAINT FRAME
D225 REPLACE WD DOOR W/ LABEL DOOR, PAINT HM FRAME/ PROVIDE HC HARDWARE
D226 REFINISH WOOD FRAME & SIDE LIGHTS

CW113	REPLACE CASEWORK AND COUNTERTOP/SINK
CW114	REPLACE CASEWORK AND COUNTERTOP AND WALL CABINET
CW115	KITCHEN AREA- COUNTER/SINK/ STOVE/ DW/ REF NOT ACCESSIBLE
CW116	REWORK SHELVING FOR ACCESSIBILITY
CW117	REPLACE WOOD CASEWORK W/ WOOD (DARK STAIN CASEWORK IN CONFIGURATION TO MATCH EXISTING EXCEPT NO GLASS @ DOORS, ALL SOLID FRONTS.
CW118	REPLACE LAB CASEWORK

WARDROBES

CW201	REPLACE WARDROBES
CW202	REPAIR WARDROBES
CW203	REFINISH WARDROBES AND REPLACE HARDWARE WITH HCP
CW204	REPAINT WARDROBES
CW206	REPLACE WARDROBES
CW207	REPLACE WARDROBES DOOR MECHANISMS
CW208	ADJUST WARDROBES DOOR MECHANISMS
CW209	MAKE CLOSET HCP ACCESSIBLE

STORAGE UNITS

CW301	REFINISH STORAGE UNITS - WD (MAT)
CW302	PAINT STORAGE UNITS - MTL
CW302A	PAINT STORAGE UNITS - WD
CW303	REPAINT WALL STATION CABINET WITH CUBBY

CW304 REPLACE STORAGE UNITS (MAT)
CW305 REPLACE STORAGE UNITS HARDWARE

DISPLAY CASES

CW401 REPLACE DISPLAY CASE
CW402 REPAIR DISPLAY CASE
CW403 REFINISH DISPLAY CASE
CW404 REPLACE HARDWARE
CW405 PAINT DISPLAY CASE
CW406 REPLACE GLASS DOORS AT TEMP. GLAZED DOORS

LOCKERS:

L101 REPAINT EXISTING SINGLE TIER LOCKERS WITH ELECTROSTATIC PAINT, REPLACE 20% OF LOCKERS
NOTE: KEY NOTE NOT ON SPREADSHEET, REFER TO PLANS FOR LOCKERS

SIGNAGE:

REPLACE ALL CODE AND DIRECTIONAL SIGNAGE WITH CODE COMPLIANT BRAILLE SIGNAGE
REPLACE ALL EXTERIOR SIGNAGE

LAB EQUIPMENT

CW501 REPLACE LAB TABLES
CW502 PROVDE SCIENCE LAB HCP WORK STATIONS
CW503 REPLACE SCIENCE CASEWORK
CW504 REPLACE SCIENCE DEMONSTRATION STATION
CW505 SCIENCE DEMONSTRATION STATION NOT ACCESSIBLE

BATHROOMS/FIXTURES

FIXTURES - HCP COMP.

BF101 REPLACE SINK (HCP)
BF102 REPLACE TOILETS (HCP)
BF103 REPLACE URINAL (HCP)
BF104 REPLACE DF
BF105 GANG WASH STATION NOT HP ACCESSIBLE
BF106 REMOVE URINAL
BF107 REMOVE SINK

FIXTURES

BF201 REPLACE SINK (BROKEN)
BF202 REPLACE TOILETS (HCP)
BF203 REPLACE URINAL (BROKEN)
BF204 REPLACE DF

FLOOR DRAINS

BF301 REPLACE FLOOR DRAIN

PARTITONS

BF401	REPLACE TOILET PARTITON (HCP)
BF402	REPLACE TOILET PARTITON (BROKEN)
BF403	REWORK TOILET PARTITIONS FOR HP COMPLIANCE
BF404	REPAIR TOILET PARTITONS
BF405	PAINT TOILET PARTITON

MISC.

BF501	PROVIDE NEW HC COMPLIANT TOILET ROOM ACCESSORIES
BF502	GRAB BARS NOT PROVIDED
BF503	DOOR SWINGS INTO FREE AREA
BF504	TOILET ROOM UNACCEPTABLE
BF505	CLEAR DIMENSION BETWEEN FIXTURES INADEQUATE
BF506	REWORK BATHROOM FOR HP COMPLIANCE
BF507	SHOWER NO HCP ACCESSIBLE
BF508	PROVIDE HCP HOME KITCHEN

TOILET ACCESSORIES (TYPICAL ALL BATHROOMS LOWELL HIGH SCHOOL)

BTA106	REPLACE ALL TOILET ACCESSORIES INCLUDING BUT NOT LIMITED TO: MIRRORS, GRAB BARS, PAPER TOWEL DISPENSERS, SOAP DISPENSERS, SANITARY NAPKIN DISPENSERS, TRASH DISPENSERS.

STAIRS:

TREADS AND RISERS

S101	TREADS INSUFFICIENT
S102	RISER INSUFFICENT
S103	INFILL REQUIRED
S104	PROIVDE NON-SLIP SURFACE
S105	PAINT UNDERSIDE OF STAIR
S106	REPLACE RUBBER TREADS AND RISERS
S107	REPLACE HANDRAIL
S108	REFINISH WOOD TREADS AND RISERS
S109	REPAIR BROKEN TERRAZZO NOSING
S110	RISE/RUN ILLEGAL

STAIR REPLACEMENT

S111	REPLACE ENTIRE STAIR W/ CONCRETE FILLED METAL PAN STAIRS AND INTERMEDIATE LANDINGS IN SIMILAR CONFIGURATION TO EXIST. PROVIDE METAL PAINTING HANDRAILS @ EACH SIDE AT 2'-10" AFF. PROVIDE METAL PAINTING RAILINGS/GUARDRAILS @ 3'-6" AFF W/ VERTICAL PICKETS @ 4" O.C. MAX. PROVIDE RUBBER DISK FLOORING AT ALL TREADS, RISERS AND LANDINGS. EXISTING FLOOR STRUCTURE TO REMAIN; INSTALL NEW RUBBER DISK FLOORING.

OTHER

S201	HANDRAILS OR GUARDRAILS NON-COMPLIANT
S202	REPAINT HANDRAILS OR GUARDRAILS

S203 LANDING INSUFFICIENT
S204 REPAIR LANDING
S205 INSUFFICIENT RAIL EXTENTION
S206 PROVIDE WALL MOUNTED HANDRAIL
S207 WALL MOUNTED HANDRAIL NON-COMPLIANT
S208 RE-PAINT STEEL LADDER AND CASE
S209 NO HANDRAILS PRESENT
S210 REWORK NEWEL MTL POST DOOR ADDED HEIGHT OF HANDRAIL
S211 REPAIR/REPLACE SKYLIGHTS
S212 REMOVE OFFICE CUBICLE (NOT ACCESSIBLE)
S213 NON HC COMPLIANT UNIT KITCHEN
S214 REPLACE OFFICE FURNITURE METAL FLOOR MTD PARTITIONS
S215 REPLACE S.S. CORNER GUARD
S216 FIRE PULL STATION NOT ACCESSIBLE
S217 REPLACE GUARDRAIL AT AREAWAY
S218 REPLACE CONC. STAIR

RAMP

R101 SLOPE NON-COMPLIANT
R102 HANDRAILS, NON-COMPLIANT
R103 REPAINT HANDRAILS
R104 LANDING NON-COMPLIANT
R105 PROVIDE NON-SLIP SURFACE
R106 NO HANDRAILS
R107 ADD NEW RAMP TO MAKE SPACE HC ACCESSIBLE

HARDWARE:

H101 REPLACE HARDWARE (HCP COMPLIANCE)
H102 ADD PANIC DEVICESER
H103 ADD DOOR CLOSURE
H104 UPDATE BOILER ROOM DOOR HARDWARE
H105 TACTILE WARNING HARDWARE REQUIRED
H106 REPLACE COMPLETE HARDWARE SET INCLUDING BUT NOT LIMITED TO; HINGES, LOCKSET (LEVER HANDLES), LATCHES, CLOSERS, KICKPLATES, WALL/FLOOR STOPS, PANIC DEVICES, THRESHOLDS, TRANSITION STRIPS.
H107 POWER OPERATORWITH SURFACE MOUNTED CONDUIT

LOWELL HIGH SCHOOL
BASE REPAIR KEY NOTES
FRESHMAN ACADEMY
11/10/16
PE # 67150.00

GENERAL NOTES:

1. **GENERAL NOTES APPLY TO ALL CONDITIONS NOTED BELOW EVEN IF NOT NOTED ON BASE REPAIR SPREADSHEETS.**
2. **REFER TO EXISTING CONDITIONS / BASE REPAIR REPORTS FOR CONSULTANT SCOPE.**
3. **REPLACE ALL DOORS.**
4. **ALL GWB & PLASTER WALLS ARE PAINTED / REPAINTED.**
5. **REMOVE ONE SIDE OF WALL TO INSTALL NEW PIPING AND PLUMBING FIXTURE CARRIERS.**
6. ***GENERAL NOTE #6 NOT USED***
7. **REPLACE ALL COMPLETE HARDWARE SETS.**
8. **INSTALL POWER OPERATORS AT 20% OF DOORS TO PROVIDE HC COMPLIANCE.**
9. **INSTALL 2'-0" W. X 4'-0" L. 2-HR. RATED SHAFTWALL CHASE AT EACH CLASSROOM; MODIFY FRAMING AS REQUIRED. PROVIDED RATED SHAFTBOTTOM AT 1ST FLR. FRAMING NOTE: CHASE GRAPHIC NOT SHOWN ON PLAN.**
10. **REPAIR GWB/PLASTER/WD WAINSCOAT AT ALL EXTERIOR WALLS RESULTING FROM REMOVAL OF RADIATORS. NOTE: RADIATOR GRAPHIC NOT SHOWN ON PLANS**
11. **CHALKBOARDS ARE REMOVED PER HAZ MAT REPORT. PATCH ALL PLASTER WALLS WHERE CHALKBOARDS ARE REMOVED. REPAIR/REPAINT ALL RUNNING TRIM TO REMAIN AT CHALKBOARD SURROUND.**
12. **INSTALL NEW TOILET ACCESSORIES THROUGHOUT.**
13. **REPLACE ALL CEILINGS.**
14. **REPLACE ALL DOORS.**
15. **REPAINT EXISTING SINGLE TIER LOCKERS WITH ELECTROSTATIC PAINT, REPLACE 20% OF LOCKERS.**
16. **REPLACE ALL CODE AND DIRECTIONAL SIGNAGE WITH CODE COMPLIANT BRAILLE SIGNAGE**

FLOOR:

VCT/VINYL SHEET

F100	REPLACE VCT/VINYL SHEET OR CARPET W/ BIOBASED TILE.
F101	REPLACE VAT
F102	PATCH REPAIR VCT
F103	CLEAN AND WAX VCT/SHEET VINYL
F104	REPLACE TRANSITION STRIP
F105	CLEAN SHEET VINYL FLOORING
F106	REPLACE RADIAL RUBBER
F107	REPLACE SHEET VINYL FLOORING TREADS AND RISERS
F108	REPLACE WOOD FLOOR W/ BIOBASED TILE. REMOVE WOOD FLOOR, FASTEN ROUGH SAWN WOOD, INSTALL ROSIN PAER & E/4" T&G PLYWOOD, AND BIOBASED TILE. TAPER FLOORING AT THRESHOLD.

F109 REPLACE CARPET W/ BIOBASED TILE. REMOVE WOOD FLOOR OR PLYWOOD AS OCCURS, FASTEN ROUGH SAWN WOOD, INSTALL ROSIN PAPER & E/4" T&G PLYWOOD, AND BIOBASED TILE. TAPER FLOORING DOOR AT THRESHOLD.

F110 CLEAN SHEET VINYL

F111 REPLACE CARPET W/ BIOBASED TILE.

F112 REPLACE RESILIENT DANCE FLOOR

F113 REPLACE SHEET VINYL FLOORING W/ LINOLEUM.

F114 INSTALL BIOBASED TILE

F115 REPLACE CERAMIC TILE AND INSTALL BIOBASED TILE. REMOVE WOOD FLOOR OR PLYWOOD AS OCCURS, FASTEN ROUGH SAWN WOOD, INSTALL ROSIN PAPER & E/4" T&G PLYWOOD, AND BIOBASED TILE. TAPER FLOORING DOOR AT THRESHOLD.

F116 REMOVE EXISTING VCT, SHEET FLOORING OR CARPET AND GYPCRETE AND INSTALL NEW CEMENTITIOUS FLOOR LEVELER AND BIOBASED TILE.

CARPET

F201 REPLACE CARPET

F202 CLEAN AND SHAMPOO CPT

WOOD

F301 REPLACE WOOD FLOOR

F302 PATCH AND REPAIR WOOD FLOOR

F303 REFINISH WOOD FLOOR

F304 POWER SAND AND REFINISH WOOD FLOOR

F307 REPAIR STRIP WD. FLOORING AND REFINISH

CONCRETE

F401 REPLACE CONC. FLOOR

F402 PATCH AND REPAIR CONC. FLOOR

F403 LEVEL CONC. FLOOR

F404 REPLACE CONC. FLOOR

F405 REPAIR CONCRETE FLOOR

F406 CLEAN AND RESEAL CONCRETE FLOOR

F407 REPAINT CONC. FLOOR

F408 PATCH HOLES IN CONC. FLOOR FROM REMOVAL OF MEP PIPES

CERAMIC TILE

F501 REPLACE CERAMIC TILE

F502 PATCH AND REPAIR CERAMIC TILE

F503 CLEAN CERAMIC TILE

F504 REGROUT FLOOR TO BASE CERAMIC TILE

F505 REPLACE CARPET W/ CERAMIC TILE

TERRAZZO :

F601 REPLACE TERRAZZO

F602 REPLACE METAL TRIM IN TERRAZZO

F603 PATCH AND REPAIR CRACKS IN TERRAZZO

F604 CLEAN AND WAX TERRAZZO

F605	CLEAN QUARRY TILE/STONE
F606	REPAIR TERRAZZO BASE
F607	CLEAN/POLISH TERRAZZO FLOOR

EPOXY

F701	REPLACE EPOXY FLOORING
F702	REPAIR EPOXY FLOORING AND BASE
F703	CLEAN EPOXY FLOORING
F704	INSTALL EPOXY FLOORING

ENTRY MAT

F801	REPLACE ENTRY MAT
F802	REPLACE RECESSED ENTRY MAT
F803	REPLACE RECESSED ENTRY MAT FRAME

MARBLE

F1001	CLEAN MARBLE FLOOR

BASE:

VINYL

B101	REPLACE OR INSTALL VINYL BASE
B102	REFASTEN HEAVY DUTY VINYL BASE BOARD
B103	CLEAN QUARRY TILE BASE
B105	CLEAN TILE BASE
B106	REPLACE ATHLETIC BASE
B107	CLEAN VINYL BASE
B108	REPLACE VCT W/ LINOLEUM

WOOD

B201	REPLACE OR INSTALL WOOD BASE
B202	REFINISH WOOD BASE
B203	REPAINT WOOD BASE

TILE

B301	REPLACE TILE BASE
B302	PATCH AND REPAIR TILE BASE
B303	REPAINT CMU WALL

TERRAZZO

B401	REPLACE TERRAZZO
B402	PATCH AND REAPAIR TERRAZO
B403	CLEAN/POLISH TERRAZZO

GLAZED CMU

B501	CLEAN GLAZED CMU BASE
B502	PATCH GLAZED CMU

CONCRETE

B601	REPAINT CONCRETE BASE

MARBLE

B701	CLEAN MARBLE BASE

STEEL

B801	PAINT STEEL BASE

WALLS:

WALL PLASTER

W001	REMOVE WOOD PANELED WALLS W/ HOMOSOTE ABOVE ON METAL STUDS & REPLACE PLASTER W/GWB IN METAL STUDS
W101	REPLACE PLASTER WALL
W102	PATCH &REPAIR PLASTER WALL
W103	REPAINT PLASTER WALL
W104	REPLACE VINYL WALLCOVERING ON PLASTER WALL
W105	INSTALL NEW PLASTER WALL
W106	REMOVE WOOD PANELING
W107	CLEAN & REPAIR C.T. ON PLASTER

GWB

W201	REPLACE OR PROVIDE GWB WALL
W202	PATCH AND REPAIR GWB WALL
W203	REPAINT GWB WALL
W204	REPAIR CRACK IN GWB WALL
W205	PAINT AND PATCH COLUMN
W206	RECAULK AT GYPSUM BOARD AND TILE CONNECTION
W207	INSTALL 2'-0" W. X 4'-0" L. 2-HR. RATED SHAFTWALL CHASE; MODIFY FRAMING AS REQUIRED. PROVIDED RATED SHAFTBOTTOM AT 1ST FLR. FRAMING NOTE: CHASE GRAPHIC NOT SHOWN ON PLAN.
W208	REMOVE ONE SIDE OF WALL TO INSTALL NEW PIPING AND PLUMBING FIXTURE CARRIERS. INSTALL NEW WALL TO MATCH EXISTING NOTE: THIS CONDITION OCCURS AT ALL PLUMBING FIXTURES AND PIPING EVEN IF NOT NOTED ON SPREADSHEET.

CMU

W301	REPLACE CMU WALL
W302	PATCH AND REPAIR CMU WALL
W303	REPAINT CMU WALL
W304	REPOINT CMU WALL
W305	EXTEND CMU WALL TO UNDERSIDE OF STRUCTURE
W306	FIRESTOP AT TOP OF CMU WALL
W307	PAINT UNFINISHED CMU
W308	INFILL WINDOW OPEING AT CMU
W309	INSTALL CMU

W310	EXPOSED CMU

BRICK

W401	REPLACE BRICK WALL
W402	PATCH AND REPAIR BRICK WALL
W403	REPAINT BRICK WALL
W404	REPOINT BRICK WALL
W405	CLEAN BRICK
W406	CLEAN GLASS BLOCK

GLAZED CMU

W501	REPLACE GLAZED CMU
W502	PATCH AND REPAIR GLAZED CMU
W503	REPOINT GLAZED CMU
W504	CLEAN GLAZED CMU
W505	CLEAN 2 X 2 WALL TILE

WOOD PANEL

W601	REPLACE WOOD PANEL
W602	PATCH AND REPAIR WOOD PANEL
W603	REPAINT WOOD PANEL
W604	REFINISH WOOD PANEL
W605	PAINT PLYWOOD SHEATHING
W606	REPAIR VERTICAL
W607	PAINT WOOD VALANCE
W608	REPAINT TACK SURFACE
W609	REPLACE PEG BOARD
W610	REMOVE WOOD PANEL AND PLASTER WALL
W611	REMOVE WOOD PANEL
W612	REMOVE HOMOSOTE
W613	PROVIDE NEW WOOD PANELING

WOOD WINDOW WALL

W701	REPLACE FIN WOOD WINDOW WALL
W702	REPAIR FIN WOOD WINDOW WALL
W703	REFINISH FIN WOOD WINDOW WALL
W704	REPAINT FIN WOOD WINDOW WALL
W705	REPAINT METAL WINDOW WALL

WOOD CHAIRRAIL AND WAINSCOT

W801	REPLACE WD WAINSCOT
W802	REPAIR WD WAINSCOT
W803	REFINISH WD PNL WAINSCOT
W804	REPAINT WD WAINSCOT

W805 REPAINT ED CHAIRRAIL
W806 REFINISH WD CHAIRAIL
W807 REWORK WD CHAIRRAIL

WAINSCOT

W901 REPLACE CERAMIC TILE WAINSCOT
W902 REPAIR CERAMIC TILE WAINSCOT
W903 REFINISH CERAMIC TILE WAINSCOT
W904 REPAINT CERAMIC TILE WAINSCOT
W905 CLEAN CERAMIC TILE WAINSCOT/WALL
W906 REPLACE PLAS. LAM. CHAIRAIL

CERAMIC TILE

W1001 PATCH CT WALL
W1002 CLEAN CT WALL

CONCRETE

W1101 REPAINT CONC. WALL
W1102 PAINT UNFINISHED CONC. WALL
W1103 REPAIR CRACK CONC. FOUND

CLAY TILE

W1202 REPAINT CLAY TILE

METAL WALL PANEL

W1301 CLEAN METAL WALL PANEL SYSTEM
W1302 REPAINT STEEL COLUMN
W1401 REPAIR CONC. FOUNDATION
W1501 REFINISH DEMOUNTABLE PARTITION AND BRACE FROM TOP OF PARTITIION @ CEILING TO DECK W/ LIGHT GUAGE FRAMING.

WINDOWS:

METAL WINDOWS

WD001 REMOVE MANUAL OPERATION SYSTEM
WD101 REPLACE MTL WINDOW
WD102 REGLAZE MTL WINDOW
WD103 RESEAL MTL WINDOW AT OPERABLE SASH
WD104 REPLACE WINDOW TRIM
WD105 REFINISH WOOD TRIM
WD106 REPLACE WINDOW HARDWARE
WD107 WINDOW NOT THERMALLY BROKEN
WD108 REFINISH METAL WINDOW
WD109 REPAINT MTL BORROWED LIGHT
WD110 REPLACE INSUL. PANEL
WD111 REMOVE & REPLACE WINDOW STOOL
WD113 REFINISH WOOD WINDOW SILL

WD114 REPLACE WINDOWS FRAMES AND SASHES AS INDICATED ON ELEVATIONS W/ ALUMINUM THERAMLLY BROKEN WINDOWS W/ LOW-GLAZING, INSECT SCREENS AND OPERABLE BOTTOM SASH (AWNING). WINDOW SHALL HAVE HISTORIC PATTERN (INTERNAL MUNTINS AND PROFILE SIMILAR TO 1922 BUILDING. REPLACE WINDOW TREATMENTS W/ MECHOSHADES (5% OPENNESS). REPLACE WINDOW STOOLS AND APRONS W/ SOLID SURFACE DARK COLOR STOOL & APRON. REPAIR & PAINT EXISTING WOOD TRIM AT 1892 & 1922 BUILDING.

WOOD WINDOWS

WD201 REPLACE WD WINDOW
WD202 REGLAZED WD WINDOW
WD203 RESEAL WD WINDOW
WD204 REPAINT WD WINDOW
WD205 REFINISH WD WINDOW
WD206 REPLACE WINDOW TRIM
WD207 REFINISH WINDOW TRIM
WD208 REPLACE WINDOW HARDWARE
WD209 REPLACE PARTING BEADS
WD210 REPLACE SCREEN
WD211 EX WINDOW WILL NOT CLOSE
WD212 HARDWARE MISSING
WD213 REPAINT WD WINDOW TRIM
WD214 REPLACE WD WINDOW SILL
WD215 REPLACE WD WINDOW WALL SYSTEM

GLASS BLOCK

WD401 REPLACE WINDOW & GLASS BLOCK SYSTEM

DOORS:

METAL DOOR AND FRAME

D101 REPLACE MTL DOOR AND FRAME
D102 REPAINT MTL DOOR AND FRAME
D103 REPLACE DOOR LIGHT AND STOPS
D104 REPAINT MTL DOOR
D108 REPLACE HM FRAME
D109 INSUFFICIENT HCP CLEAR W1401
D110 EGRESS DOORS ARE NOT REQUIRED 3’-0” WIDTH
D111 HM DOOR NEEDS LABEL RATING
D112 REPLACE DOOR LITE W/ WIRE GLASS
D113 REPLACE TRANSOM W/WIRE GLASS
D114 REWORK HM DOORS OR OPENINGS TO PROVIDE HCP ACCESSIBILITY
D115 REPLACE HM DOOR ONLY & REPAINT FRAME
D116 REPLACE ALUM. ENTRY W/ HM
D117 THRESHOLD NOT ACCESSIBLE
D118 PAINT HM WINDOW WALL
D119 PAINT HM FRAME

WOOD DOORS

D201	REPLACE WD DOOR AND FRAME
D202	REPLACE WD DOOR AND FRAME W/HM DOOR AND FRAME
D203	REPLACE WD DOOR ONLY W/ EXTERIOR HM DOOR
D204	REFINISH WD DOOR AND FRAME
D205	REPLACE DOOR LIGHTS
D206	UNEQUAL LEAFS ARE REQUIRED
D207	REPAINT WOOD DOOR
D208	REPAINT HM FRAME
D209	INSUFFICIENT HCP CLEARANCE
D210	REFINISH WD DOOR AND PAINT MTL FRAME AND REPLACE HARDWARE
D211	PAINT DUTCH BOTTOM
D212	REPLACE WD DOOR AND FRAME W/RATED WD DOOR AND FRAME
D213	REPLACE DOOR LIGHT W/1/4" WIRE GLASS
D214	REFINISH WD TRANSOM AND PAINT METAL FRAME
D215	REPLACE WOOD DOOR ONLY
D215A	REPLACE WD REVERSE SWING & REWORK WOOD FRAME (DUTCHMAN)
D216	REMOVE WOOD DOOR AND FRAME
D217	REPLACE DUTCH DOOR
D219	REPLACE WOOD DOOR
D219A	INCREASE HM DOOR FRAME OPENINGS FOR HC COMPLIANCE
D220	REPLACE WD & INSTALL HM RATED FRAME W/ WD TRIM TO MATCH
D221	REPLACE WD AND PAINT EXIST. HM FRAME
D222	REPLACE WOOD DOOR AND REFINISH WOOD FRAME
D223	REWORK WOOD DOORS/FRAMES OR OPENING TO PROVIDE HCP ACCESS
D224	BONDO, SAND & PAINT FRAME
D225	REPLACE WD DOOR W/ LABEL DOOR, PAINT HM FRAME/ PROVIDE HC HARDWARE
D226	REFINISH WOOD FRAME & SIDE LIGHTS
D227	REFINISH/REPAIR WOOD FRAME

STEEL DOORS

D301	REPLACE STEEL DOOR & FRAME W/ HM DOOR & FRAME
D401	REFINISH WD TRANSOM & PAINT MTL FRAME

OVERHEAD DOORS

D401	REPLACE SECTIONAL OVERHEAD DOOR

CEILINGS:

ACT

C001	CEILING TILES DO NOT MATCH REPLACE - MATCH TILE AT ELEV. VEST
C101	REPLACE ACT CLG 2 X 4
C102	REPLACE 12 X 12 CLG TILES
C103	REPLACE 12 X 12 ACT W/ 2 X 4 ACT
C104	REPLACE 12 X 12 ACT W/ 2 X 4 ACT
C105	REPLACE ACT 2 X 2

C106 REPAINT SCT CLG
C107 INSTALL ACT CLG 2 X 2 & LIGHTING
C108 NEW ACT 2 X 4 GOOD CONDITION
C109 PROVIDE 2 X 4 LIGHTING
C110 PROVIDE 2 X 4 ACT
C111 12 X 12 GOOD CONDITION
C112 REPLACE ACT (CLASSROOMS/OFFICES/CONFERENCE) ULTIMA TEGULAR 2'X4'
C113 REPLACE ACT (MUSIC ROOM) ULTIMA TEGULAR W/ 50% WEDGE SHAPED TILES CONWED DESIGNSCAPE BY OWNS CORNING.
C114 REPLACE ACT (CORRIDORS/STORAGE/STAIRS) ULTIMA LAY-IN 2'X4'
C115 REPLACE ACT (KITCHEN) HEALTH ZONE OPTIMA 2X2

PLASTER

C201 REPLACE PLASTER CLG
C202 PATCH & REPAIR PLASTER CLG
C203 REPAINT PLASTER CLG
C204 PATCH AND REPAIR PLASTER AT SKYLIGHT WELL
C205 EXIST. PLASTER CLG CONTAIN ASBESTOS SPRAYED STIPPLE FINISH
C206 INSTALL PLASTER SOFFFIT & FASCIA @ DROPPED CLG
C207 REMOVE SKYLIGHT PATCH OPENING
C208 REMOVE PLASTER CLG & MTL LATH SYSTEM @ STRUCTURE
C209 INFILL AT CLG STORAGE AREA MEZZANINES W/ 1 HR ENCLOSURES
C210 PROVIDE PLASTER CEILING

GWB

C301 REPLACE GWB CLG.
C302 PATCH AND REPAIR GWB CLG.
C303 REPAINT GWB CLG.
C304 PROVIDE GWB CEILING
C305 REPAIR CRACK AT GWB CLG.
C306 REPAINT SKYLIGHT WELL

CEILING PANELS

C401 REPLACE CEILING PANELS
C402 PATCH & REPAIR CLG. PNLS
C403 REPAINT CEILING PNLS

EXPOSED STRUCTURE

C501 PAINT EXPOSED STL STRUCT. & DECK
C502 PAINT EXPOSED ED BEAMS
C503 REFINISH EXPOSED WD PLANKS, GLULAM BEAMS, COLUMN, AND BASE
C504 REFINISH GLULAM BEAMS
C506 EXIST. CEMENT FIBER DECK EXPOSED UNPAINTED W/ BULBTEES
C507 PAINT EXPOSED HVAC/MECH/ELEC. PIPING CONDUIT
C508 PAINT CONC. CLG.

CONCRETE

C601	PAINT EXPOSED CONC. STRUCT.

METAL PANEL

C701	REPLACE 12 X 12 METAL PANEL CLG.

METAL PANEL

C702	REPLACE 12 X 12 METAL PANEL CEILING ELEVATOR
E1	CAB SIDE NON-COMPLAINT
E2	CONTROLS ARE TOO HIGH
E3	FLOOR LEVEL NEEDS ELEVATOR

ATTACHMENTS

ACOUSTICAL TREATMENTS
REPLACE 4 X 8 TECTUM PANELS ON WALLS

WOOD TRIM

A101	REPLACE WOOD TRIM
A102	REPAIR WOOD TRIM
A103	REFINISH WOOD TRIM
A104	REPAINT WOOD TRIM
A105	REFINISH WOOD SEAT
A106	REFINISH WD GUARD RAIL 2 X 8
A107	PAINT HVAC GRILLE

VISUAL DISPLAY SURFACES: CHALK/TACK/AND FRAME

A201	REPLACE CHALK AND FRAME
A202	REPAIR CHALK AND TACK AND METAL FRAME
A203	REPAIR CHALK AND TACK AND WOOD FRAME
A204	PAINT TACK BOARDS AND FRAME
A205	REPLACE TACK AND FRAME
A206	REPLACE TACK, REMOVE & REINSTALL WD TRIM
A207	REPLACE TACK W/MTL FRAME
A208	REPLACE CHALK & MTL FRAME
A209	REPLACE CHALK, REMOVE & REINSTALL
A210	PAINT TACK BD. TRM
A211	PAINT WOOD TACK STRIP
A212	REPAINT TACK BD
A213	STRIP PAINT FROM ALUM CH & TACK BDS.
VD214	REPLACE EXISTING CHALK/WHITE/TACK BDS & PROVIDE TWO – 8'LONG WHITE BOARDS & FOUR-4' LONG TACK BOARDS. CHALKBOARDS ARE REMOVED PER HAZMAT REPORT; PATCH PLASTER AT WHERE CHALKBOARDS ARE REMOVED IN 1892 AND 1922 BUILDING CLASSROOMS.
VD214A	REMOVE EXISTING WHITE/TACK BOARDS & PROVIDE TWO-8'LONG WHITE BOARDS & FOUR-4' LONG TACK BOARDS. PATCH GWB AS REQUIRED.
VD215	REPLACE/PROVIDE EXISTING WHITE/TACK BDS & PROVIDE ONE – 4'LONG WHITE BOARD & ONE – 4' LONG TACK BD

VD216 REPLACE/PROVIDE ALL EXISTING TACK BDS & DISPLAY CASES & PROVIDE TWO'8' LONG TACKBOARDS
& 1 DISPLAY CASE

SPEAKER/CLOCK

A301 REPLACE SPEAKER/CLOCK
A302 PROVIDE SPEAKER/CLOCK
A303 NO SPEAKER
A304 REPLACE CLOCK

FIRE EXTINGUISHER & EXIT SIGNAGE (NOTE: LOWELL HIGH SCHOOL REPLACE ALL EXTINGUISHERS & CABINETS TYP EVEN IF NOTES NOT INCLUDED ON SPREADSHEET).

A401 REPLACE FIRE EXTINGUISHER ONLY
A402 REPLACE FIRE EXTINGUISHER AND CABINETS
A403 ADD FIRE EXTINGUISHER
A404 EXIT SIGNS NOT ILLUMINATED
A405 NO EXIT SIGNS PRESENT
A406 REPLACE EXIT SIGN
A407 PAINT FIRE EXT. CABINET
A408 REPLACE WIRE GLASS IN FIRE EXT. CABINET

MOVABLE PARTITIONS

A501 REPLACE OPERABLE PARTITION
A502 REPLACE DIVIDER SCREEN
A503 ADJUST AS REQUIRED
A504 REPAIR AND REFINISH

GYM EQUIPMENT

A601 REPLACE BLEACHERS
A602 ADJUST BLEACHERS
A603 REPAIR SEATING
A604 REFINISH SEATING

CASEWORK AND EQUIPMENT

CASEWORK

CW001 REPLACE UNIT VENTILATOR AND INTEGRAL STORAGE UNIT
CW101 REPLACE CASEWORK (PLASTIC LAMINATE)
CW102 REPAIR CASEWORK
CW103 REPLACE COUNTER TOP ONLY (FINISH)
CW104 REFINISH CASEWORK
CW105 REPAINT CASEWORK
CW106 REPLACE HARDWARE
CW107 PROVIDE SHELVES
CW108 RECONFIGURE FOR HCP AT SINK
CW109 REPAINT SHELVING

CW110	CLEAN BASE & WALL CABINET ADJUSTINGS
CW111	CASEWORK NT HCP ACCESSIBLE - REWORK
CW112	ADD LOCKS TO CASEWORK
CW113	REPLACE CASEWORK AND COUNTERTOP/SINK
CW114	REPLACE CASEWORK AND COUNTERTOP AND WALL CABINET
CW115	KITCHEN AREA- COUNTER/SINK/ STOVE/ DW/ REF NOT ACCESSIBLE
CW116	REWORK SHELVING FOR ACCESSIBILITY
CW117	REPLACE WOOD CASEWORK W/ WOOD (DARK STAIN CASEWORK IN CONFIGURATION TO MATCH EXISTING EXCEPT NO GLASS @ DOORS, ALL SOLID FRONTS.
CW118	REPLACE LAB CASEWORK

WARDROBES

CW201	REPLACE WARDROBES
CW202	REPAIR WARDROBES
CW203	REFINISH WARDROBES AND REPLACE HARDWARE WITH HCP
CW204	REPAINT WARDROBES
CW206	REPLACE WARDROBES
CW207	REPLACE WARDROBES DOOR MECHANISMS
CW208	ADJUST WARDROBES DOOR MECHANISMS
CW209	MAKE CLOSET HCP ACCESSIBLE

STORAGE UNITS

CW301	REFINISH STORAGE UNITS - WD (MAT)
CW302	PAINT STORAGE UNITS - MTL
CW302A	PAINT STORAGE UNITS - WD
CW303	REPAINT WALL STATION CABINET WITH CUBBY
CW304	REPLACE STORAGE UNITS (MAT)
CW305	REPLACE STORAGE UNITS HARDWARE

DISPLAY CASES

CW401	REPLACE DISPLAY CASE
CW402	REPAIR DISPLAY CASE
CW403	REFINISH DISPLAY CASE
CW404	REPLACE HARDWARE
CW405	PAINT DISPLAY CASE
CW406	REPLACE GLASS DOORS AT TEMP. GLAZED DOORS

LOCKERS:

L101	REPAINT EXISTING SINGLE TIER LOCKERS WITH ELECTROSTATIC PAINT, REPLACE 20% OF LOCKERS NOTE: KEY NOTE NOT ON SPREADSHEET, REFER TO PLANS FOR LOCKERS

SIGNAGE:

REPLACE ALL CODE AND DIRECTIONAL SIGNAGE WITH CODE COMPLIANT BRAILLE SIGNAGE
REPLACE ALL EXTERIOR SIGNAGE

LAB EQUIPMENT

CW501	REPLACE LAB TABLES
CW502	PROVDE SCIENCE LAB HCP WORK STATIONS
CW503	REPLACE SCIENCE CASEWORK
CW504	REPLACE SCIENCE DEMONSTRATION STATION
CW505	SCIENCE DEMONSTRATION STATION NOT ACCESSIBLE

BATHROOMS/FIXTURES

FIXTURES - HCP COMP.

BF101	REPLACE SINK (HCP)
BF102	REPLACE TOILETS (HCP)
BF103	REPLACE URINAL (HCP)
BF104	REPLACE DF
BF105	GANG WASH STATION NOT HP ACCESSIBLE
BF106	REMOVE URINAL
BF107	REMOVE SINK

FIXTURES

BF201	REPLACE SINK (BROKEN)
BF202	REPLACE TOILETS (HCP)
BF203	REPLACE URINAL (BROKEN)
BF204	REPLACE DF

FLOOR DRAINS

BF301	REPLACE FLOOR DRAIN

PARTITONS

BF401	REPLACE TOILET PARTITON (HCP)
BF402	REPLACE TOILET PARTITON (BROKEN)
BF403	REWORK TOILET PARTITIONS FOR HP COMPLIANCE
BF404	REPAIR TOILET PARTITONS
BF405	PAINT TOILET PARTITON

MISC.

BF501	PROVIDE NEW HC COMPLIANT TOILET ROOM ACCESSORIES
BF502	GRAB BARS NOT PROVIDED
BF503	DOOR SWINGS INTO FREE AREA
BF504	TOILET ROOM UNACCEPTABLE
BF505	CLEAR DIMENSION BETWEEN FIXTURES INADEQUATE
BF506	REWORK BATHROOM FOR HP COMPLIANCE
BF507	SHOWER NO HCP ACCESSIBLE
BF508	PROVIDE HCP HOME KITCHEN

TOILET ACCESSORIES (TYPICAL ALL BATHROOMS LOWELL HIGH SCHOOL)

BTA106	REPLACE ALL TOILET ACCESSORIES INCLUDING BUT NOT LIMITED TO: MIRRORS, GRAB BARS, PAPER TOWEL DISPENSERS, SOAP DISPENSERS, SANITARY NAPKIN DISPENSERS, TRASH DISPENSERS.

STAIRS:

TREADS AND RISERS

S101	TREADS INSUFFICIENT
S102	RISER INSUFFICENT
S103	INFILL REQUIRED
S104	PROIVDE NON-SLIP SURFACE
S105	PAINT UNDERSIDE OF STAIR
S106	REPLACE RUBBER TREADS AND RISERS
S107	REPLACE HANDRAIL
S108	REFINISH WOOD TREADS AND RISERS
S109	REPAIR BROKEN TERRAZZO NOSING
S110	RISE/RUN ILLEGAL

STAIR REPLACEMENT

S111	REPLACE ENTIRE STAIR W/ CONCRETE FILLED METAL PAN STAIRS AND INTERMEDIATE LANDINGS IN SIMILAR CONFIGURATION TO EXIST. PROVIDE METAL PAINTING HANDRAILS @ EACH SIDE AT 2'-10" AFF. PROVIDE METAL PAINTING RAILINGS/GUARDRAILS @ 3'-6" AFF W/ VERTICAL PICKETS @ 4" O.C. MAX. PROVIDE RUBBER DISK FLOORING AT ALL TREADS, RISERS AND LANDINGS. EXISTING FLOOR STRUCTURE TO REMAIN; INSTALL NEW RUBBER DISK FLOORING.

OTHER

S201	HANDRAILS OR GUARDRAILS NON-COMPLIANT
S202	REPAINT HANDRAILS OR GUARDRAILS
S203	LANDING INSUFFICIENT
S204	REPAIR LANDING
S205	INSUFFICIENT RAIL EXTENTION
S206	PROVIDE WALL MOUNTED HANDRAIL
S207	WALL MOUNTED HANDRAIL NON-COMPLIANT
S208	RE-PAINT STEEL LADDER AND CASE
S209	NO HANDRAILS PRESENT
S210	REWORK NEWEL MTL POST DOOR ADDED HEIGHT OF HANDRAIL
S211	REPAIR/REPLACE SKYLIGHTS
S212	REMOVE OFFICE CUBICLE (NOT ACCESSIBLE)
S213	NON HC COMPLIANT UNIT KITCHEN
S214	REPLACE OFFICE FURNITURE METAL FLOOR MTD PARTITIONS
S215	REPLACE S.S. CORNER GUARD
S216	FIRE PULL STATION NOT ACCESSIBLE
S217	REPLACE GUARDRAIL AT AREAWAY
S218	REPLACE CONC. STAIR

RAMP

R101	SLOPE NON-COMPLIANT
R102	HANDRAILS, NON-COMPLIANT
R103	REPAINT HANDRAILS

R104	LANDING NON-COMPLIANT
R105	PROVIDE NON-SLIP SURFACE
R106	NO HANDRAILS
R107	ADD NEW RAMP TO MAKE SPACE HC ACCESSIBLE

HARDWARE:

H101	REPLACE HARDWARE (HCP COMPLIANCE)
H102	ADD PANIC DEVICESER
H103	ADD DOOR CLOSURE
H104	UPDATE BOILER ROOM DOOR HARDWARE
H105	TACTILE WARNING HARDWARE REQUIRED
H106	REPLACE COMPLETE HARDWARE SET INCLUDING BUT NOT LIMITED TO; HINGES, LOCKSET (LEVER HANDLES), LATCHES, CLOSERS, KICKPLATES, WALL/FLOOR STOPS, PANIC DEVICES, THRESHOLDS,TRANSITION STRIPS.
H107	POWER OPERATOR WITH SURFACE MOUNTED CONDUIT

THERMAL & MOISTURE PROTECTION

TM101	SEALANT AT WINDOW
TM102	CAULKING AT WINDOW
TM103	SEALANT AT DOOR
TM104	CAULKING AT DOOR

Ms. Alicia Caritano
Perkins Eastman
50 Franklin Street, Suite 203
BOSTON, MA 02110

SUBJECT: Lowell High School, Lowell, MA (Perkins Eastman Project #67150.00)
Existing Conditions Report - Acoustics

Dear Ms. Caritano,

On August 26 Cavanaugh Tocci toured the buildings at Lowell High School in order to assess the overall acoustical designs in place, in the areas of room acoustical treatments, sound isolation constructions, and HVAC (background) sound. Allowances for detailed acoustical measurements in these areas were not included in our scope, though we made visual observations in larger volume spaces and typical classrooms, and also measured background (HVAC) noise levels in rooms of interest with a hand-held sound level meter. Our observations and comments are presented herein. Observations were made in the Kouloheras Building, the Lord Building (including the Field House), and the Freshman Academy. Further detailed acoustical recommendations (such as sq. ft. areas of acoustic treatments, specific types, etc.) will be provided in the feasibility study acoustical report.

Design Criteria:

We understand that the project will be designed to meet either the LEED v4 or NE-CHPS design standard for educational buildings. These standards are based to a significant extent on the ANSI S12.60 acoustical standard for schools, requiring the following:

- Reverberation limits in core learning spaces: Spaces used for teaching purposes must have sufficient sound absorption treatments in place to result in low mid-frequency sound reverberation levels. Depending on the room volume, core learning spaces are to be designed such that the mid-frequency reverberation time does not exceed 0.60 to 0.70 seconds.

- Specific criteria for sound and impact isolation constructions is required, to control unwanted sound intrusion into core learning spaces. For instance, demising partitions between a core learning space and an adjacent core learning space must be designed to achieve an airborne sound isolation rating of no less than STC-50 (inclusive of any pass doors). Other specific STC ratings are required for specific room adjacencies.

- Low background sound levels from HVAC equipment is required in core learning spaces, to provide good listening conditions (high signal-to-noise ratio, such that voice levels significantly exceed background sound levels). Depending on the design standard, background sound levels in core learning spaces are not to exceed 35 dBA or 40 dBA (approximately NC-30 to NC-35). The following lists recommended Noise Criterion (NC) maximum levels based on current design standards for educational buildings:

TV Studio:	NC-25
Core Learning Spaces:	NC-30
Auditorium:	NC-30
Theater:	NC-30
Music Suite:	NC-30
Cafeteria:	NC-35
Private Offices:	NC-35
Gymnasium/Pool:	NC-40

- The City of Lowell noise ordinance lists maximum allowable levels resulting from operation of mechanical equipment serving the school buildings (sound to neighboring property lines).

Summary of Findings:

The attached tables present our observations and notes for each room visited during our survey. In general, we found the following:

Room Treatments, Sound Isolation, and HVAC Background Sound:

In general, most areas of the various buildings had reasonable amounts and locations of room acoustic treatments, with the following exceptions:

- One of the Classrooms visited (Room 223 in the Kouloheras building) had a wood floor, sound reflective wall surfaces, and an exposed hard ceiling. For this and any other classroom with similar treatments, additional sound absorption would be needed to result in target reverberation limits. For rooms with hard floors and hard wall surfaces, with ceilings approximately 10-ft. AFF or lower, acoustical ceiling tile (approximately 100% of the ceiling area) with minimum NRC of 0.70 will be sufficient for reverberation control. For ceilings higher than approximately 10-ft. AFF, additional wall sound absorption treatment may be required to meet reverberation limits. Further review would take place in the feasibility study phase, with specific recommendations.

- In the Cafeteria spaces, additional wall sound absorption treatment will be recommended to provide improved control of reverberation and noisiness during use, in addition to acoustical ceiling tile with NRC rating of 0.70 or higher (we will provide more specific recommendations in the feasibility report).

- The Auditorium, Theatre, Little Theatre, TV Studio, Library, Gymnasium, Pool were generally well-designed for room acoustic treatment scope. During the feasibility phase, we will provide further review and additional comment/recommendations.

- The Band and Choral rooms had significantly greater areas of sound absorption treatment than needed to meet reverberation targets (the spaces are expected to sound significantly “dry” during rehearsal, etc.). Typically, a hard floor is recommended, ceiling height should be maximized as possible, and areas of hard wall, wall sound diffusion panels, and wall sound

absorption panels are recommended for these types of rooms. During the feasibility phase, we will provide further review and additional comment/recommendations.

- Some of the classrooms used demountable partitions (those which meet the underside of acoustical tile ceilings). The sound isolation (STC rating) provided by this design is limited to that of the CAC rating of acoustical tile ceilings (where used). The resulting STC rating is expected to be significantly less than STC-50 as required for core learning space to core learning space, and STC-45 for core learning space to corridor. To meet the required ratings, partitions would need to continue to the underside of deck, with sealant at the partition/deck connections.

- Of the spaces visited during our visit, we did not find door gaskets (acoustical seals) installed. To meet the acoustical enhanced acoustical performance level for LEED v4 (not required for the pre-requisite level), and both the pre-requisite and enhanced acoustical performance levels of the NE-CHPS standard, acoustical door gaskets (perimeter seals and active door drop seals) and acoustically rated door panels are required for the following:

  - All entry doors from corridor to core learning space (STC-30 door).

  - All entry doors to music rehearsal or performance spaces (STC-40 door).

  - All connecting doors between core learning spaces (STC-47 acoustically-rated assembly with STC 53 fixed partition).

- A number of the spaces visited, where background sound measurements were performed, showed higher than recommended HVAC background sound levels. The following spaces (those measured during our visit) have existing HVAC sound levels higher than recommended criteria (there may be other rooms which exceed recommended maximum levels, though these are a sampling showing that additional noise control measures would be required to meet target limits).

  - Classroom 652 (Lord) NC-39
  - Keyboard Classroom (Kouloheras) NC-45
  - Pool (Lord) NC-50
  - Gymnasium (Lord) NC-55
  - Library (Lord) NC-45
  - Little Theater (Lord) NC-41
  - Auditorium (Kouloheras) NC-34
  - Theater (Freshman) NC-42

  - We performed daytime site sound measurements for a brief period along building facades facing Father Morissette Blvd. We measured an Leq (approximately average) sound level of 68 dBA during that period. This exceeds the 60 dBA Leq level used by LEED to determine a “quiet site” (those 60 dBA Leq or below). We will review measurements further to determine if any exterior building shell design (mostly glazing)

will need to be upgraded to result interior core learning space levels to conform to the LEED v4 or NE-CHPS requirements.

We look forward to additional review and recommendations during the feasibility study phase.

Sincerely,
CAVANAUGH TOCCI

Daniel M. Horan

Lincoln B. Berry

Lowell High School

Existing Conditions Evaluation /Base Repair- Audiovisual and Theatrical Systems

P.E. Proj.# 6715.00

I. Kouloheras Building

A. Irish Auditorium

1. Existing Conditions

- The Irish Auditorium is an approximately 1,600 seat auditorium within the Kouloheras building. The audio system in the auditorium dates from the 1990's. The primary control location is on the main seating level in front of the cross-aisle. The system was designed to be controlled from the control booth in the back of the balcony, necessitating some unsightly cable runs down the to the main level and in the seating rows in front of the control position. There is no physical security for equipment located within the seating area.

Figure 1 – Cabling from balcony and lighting position

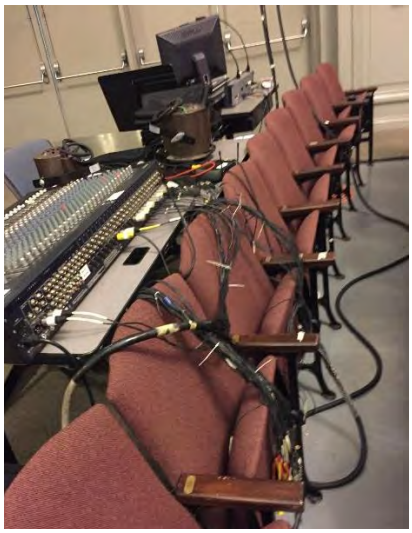

Figure 2 - Loose cables

- The loudspeaker system consists of a three-loudspeaker center cluster and two under-balcony fill loudspeakers. While the loudspeakers are high-quality, they are insufficient for an auditorium of this size.
- Audio system inputs and power outlets in the stage apron are in poor repair and, in some cases, unsafe.
- There is no permanently installed provision for the use of video presentation in the auditorium. When the school wants to show a video in the auditorium they use a portable projector on a cart, likely blocking the center aisle of the auditorium in the process.
- The audio system has input/output boxes on stage right and stage left. Many of the jacks have been taped over as non-functional.

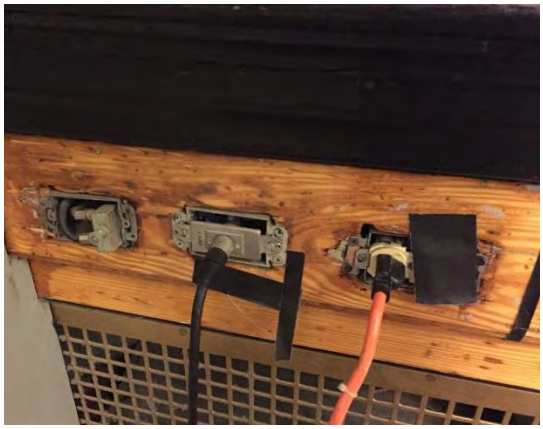

Figure 3 - Stage Apron Devices

Figure 4 - Stage Right AV Connection Box

- The main audio rack in the booth is poorly positioned, reducing valuable usable space toward the front of the booth.
- There is no dedicated scenery construction space, which has led to the creation of a shop space under the balcony seating area in what appears to be an exit pathway.

Figure 5 - Balcony Center Exit

Figure 6 - Under Balcony "Shop"

- The counterweight rigging system appears to be original to the building, with some periodic replacement and upgrades of elements within the system, such as the operating lines and the fire safety curtain. The system is in reasonable shape, but the primary components, such as the head and loft blocks, are past the end of their lifespan and do not meet current safety guidelines for those components. The support steel for the counterweight system appears undersized for modern loading criteria and safety factors.
- The fire safety curtain's counterweight arbor is chained off. This would prevent the fire curtain from operating as code requires in the event of a fire.

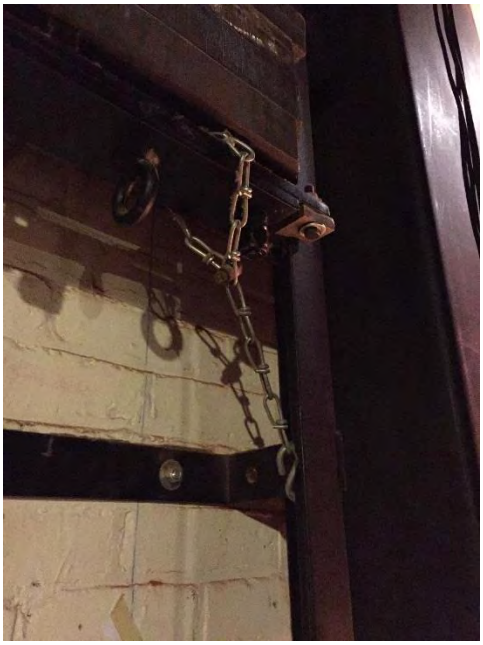

Figure 7 - Fire Curtain

Figure 8 - Rigging Head Blocks

- The theatrical lighting system consists of an older pair of Strand CD-80 dimmer racks on stage right. The dimmer racks have noisy fans in them, creating unwanted background noise on stage and for the audience. The lighting system is controlled by a more recent, but still older, lighting console adjacent to the audio mixing console. It suffers from the same cabling and physical security issues as the audio console.
- The primary front lighting position is a truss suspended over the seating area. While a reasonable way to suspend light fixtures, it does not allow for access to the light fixtures for focus. Lowering the truss for service access to the fixtures is a slow process.

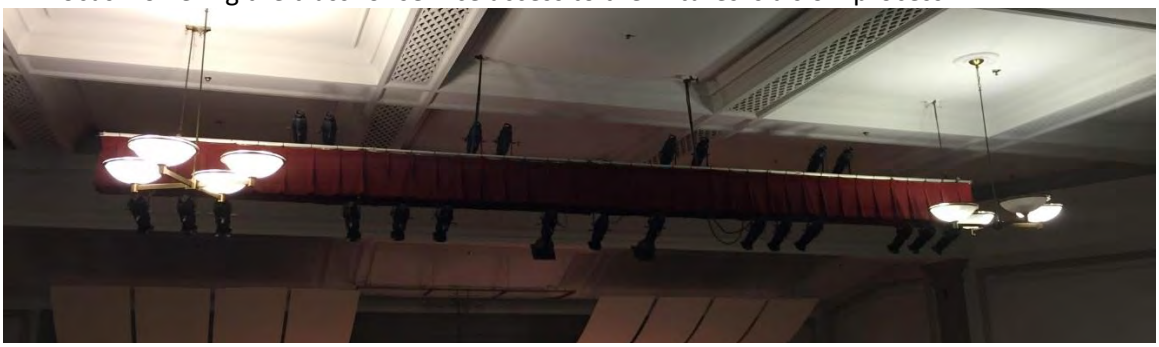

Figure 9 - Front of House Lighting Truss

- The balcony lighting positions are supported from the balcony. They leave the fixtures exposed to audience member interference and are at a lower angle than ideal for lighting the stage.
- Lighting fixtures over the stage are supported by four flown electric battens, each with a connector strip fed from the dimmer racks.
- The lighting fixture inventory consists entirely of tungsten-based theatrical fixtures. They are mostly in good repair.

- The architectural house lighting has been recently replaced to be more energy efficient, but does not dim to zero smoothly, as house lights in a performance venue should.
- The only wheelchair seating locations are at un-enclosed flattened areas in front of the cross-aisle.

2. Base Repair

- Replace non-functioning fire curtain.
- Repair non-functional audiovisual connections.
- Repair unsafe electrical outlets.
- Wheelchair seating should be improved to create enclosed areas with loose chairs at the cross aisle. Additional locations should be created at the front of the seating area, with companion seats, as well as at the balcony level.
- The theatrical lighting system, which is beyond its useful life, should be completely replaced with a new LED-based system. This will reduce energy consumption, reduce the heating load and reduce maintenance costs associated with lamp replacement. It will also remove the dimmer racks as a source of noise from the stage.
- The theatrical rigging system should be completely replaced. The steel structure supporting the rigging system should be assessed with current design and loading standards. The system should be replaced with a new counterweight rigging system, based on the informed desire of the school.
- The control booth at the back of the balcony should be widened and made ADA-accessible. It does not need to be as deep as it is now.

3. Future Recommendations for Feasibility Study Options

- The audiovisual system should be completely replaced. The system should include a new loudspeaker system, video presentation capability, touch panel control, production intercom, digital audio mixing console, and audio recording.
- Physical security for equipment located in the seating area, in the form of a roll-top desk or similar millwork construction, should be included in the auditorium work.
- A catwalk system over the seating area should be explored as a safer way for students and staff to access lighting fixtures.
- New wall lighting positions, ideally with better and safer access, and less possibility of audience interference, should be explored.
- Architectural house lighting should be improved to allow for more control zones and smooth dimming to 0%.

B. <u>Choral and Band Classrooms</u>

1. Existing Conditions

- The sound systems in the Band and Choral rooms are old and appear to be cobbled together from donated parts. They are well past their useful life expectancy.
- There is no ability for video presentation in these rooms, except via CRT televisions on portable carts.

2. Base Repair

- A new audio playback and recording system should be provided in each music classroom. These systems should work in conjunction with a standard classroom video presentation system. The

audio systems will allow for playback of pre-recording material through high-quality loudspeakers as well as audio recording of classes and rehearsals.

Figure 10 - Music Room Loudspeaker

C. Dance Studio

1. Existing Conditions

- There is no permanent audio system in the Dance Studio.
- The floor of the Dance Studio is a thin marley-type floor laid over concrete. It does not provide any resiliency for dancers.

2. Base Repair

- Each dance studio should be equipped with a permanent audio playback system as well as a standard classroom video presentation system.

3. Future Recommendations for Feasibility Study Options

- Two dance studios should be provided, either through renovation or in a new building. The studios should have resilient floor construction to prevent injury to dancers.

II. Lord Building

A. Field House

1. Existing Conditions

- The Field House is part of the 1980's addition to the high school. The audio system is original to the building and does not work. The school makes due with a portable system, stored in another building, for games and smaller playback devices for other uses. The cheerleaders use a dorm-room grade stereo in a plywood crate.

Figure 11 - Cheerleader Sound System

Figure 12 - Main Cluster

1. Base Repair

   - Replace entire, non-functional, audio system with new audio system.

2. Future Recommendations for Feasibility Study Options

   - In addition to the new audio system, a projection screen should be included in either the renovation or the new construction to allow for use of a portable video projector in the field house for presentations.

B. Little Theater

1. Existing Conditions

   - The Little Theater is part of the 1980's addition to the high school. The room is not used as a performance space, but as a meeting space for committees and test-taking space. The original audio system is still present, but has been supplanted in operation by a recently installed video presentation system. The projector, projection screen and touch panel controller are of recent vintage and usable.
   - The original lighting system is also still present, and used to control some lights. Some newer directional lights have been installed to make the room more suitable for video recording. Those newer lights are controlled by stand-alone dimmer modules.
   - The room was built with a dividing center partition. The partition is no longer used. A temporary plug has been installed in the seating bank and a projection screen now blocks the terminating end of the partition. The partition does not provide sufficient acoustic isolation between the two sides of the room to be usable.

2. Base Repair - Current Usage

   - The theatrical lighting system in the Little Theater should be removed. Based on the current usage, the room does not require a theatrical lighting system. The lighting should be improved to provide better lighting for the presentations, meetings and video capture events that are occurring in the room.
   - Wheelchair access to the lower presentation level should be added.

3. Base Repair – Performance Usage

   - A pipe grid should be placed over the performance and seating area to allow for theatrical lighting fixtures and scenic elements to be suspended from above.
   - A new LED-based theatrical lighting system should be installed.

- A new audiovisual system should be installed that integrated the presentation demands of the space with the audiovisual requirements of live performance.

4. Future Recommendations for Feasibility Study Options

- The audiovisual system in the Little Theater should be replaced. While the existing system is functional and recent, it is extremely basic and will not integrate with new systems in other rooms. A new audiovisual system should be designed with any renovations or improvements to the room in mind.

C. Television Studio

1. Existing Conditions

- The physical environment of the television studio suite of rooms is in good condition from a renovation in the late 1990's. The majority of the equipment in use in the production studio is original to the fit-out. The studio is using an analog, standard-definition workflow. The current industry standard is digital high-definition.
- The studio lighting is mostly tungsten-based, with a dimmer pack mounted in a nearby electrical room. While the system is currently functional, the dimmer pack is reaching the end of its useful life and studio lighting has gone over to LED fixtures in recent years. This provides for a savings both in electrical consumption, cooling costs and lamp replacement.
- The school serves as the head end for a local public access television channel. The head-end equipment associated with this is located in part of a large storage room. Typically, this kind of equipment gets a room of its own to isolate the noise and for physical security.

2. Base Repair

- The lighting system in the Television Studio should be upgraded to an LED-based system. This will reduce energy consumption, reduce the heating load in the studio and reduce maintenance costs associated with lamp replacement.

3. Future Recommendations for Feasibility Study Options

- All the equipment associated with the Television Studio should be replaced and upgraded to use at a minimum, digital high-definition, or 4K resolutions. This equipment can be placed into existing control desks, racks and the studio. The equipment should be purchases in close consultation with the school's staff.

D. TV Production Classroom

1. Existing Conditions

- TV Production and Media classes are taught in a converted standard classroom. The classroom has more than a dozen computers ringing the wall. Students work together in small groups on video projects.
- There is no built-in capability to show the entire classroom an image.

2. Base Repair

- Add two large flat-panel monitors with associated audiovisual switching system to allow for instructional use.
- Provide software to allow instructor to select any student workstation for routing to wall displays.

3. Future Recommendations for Feasibility Study Options

- Link classroom with video production studio.

E. Media Center/Library

1. Existing Conditions

- The Library has a quasi-portable video presentation system consisting of a short-throw projector mounted to a white board on a rolling stand. The system is recent, and usable, but not a good substitute for a permanently installed system.

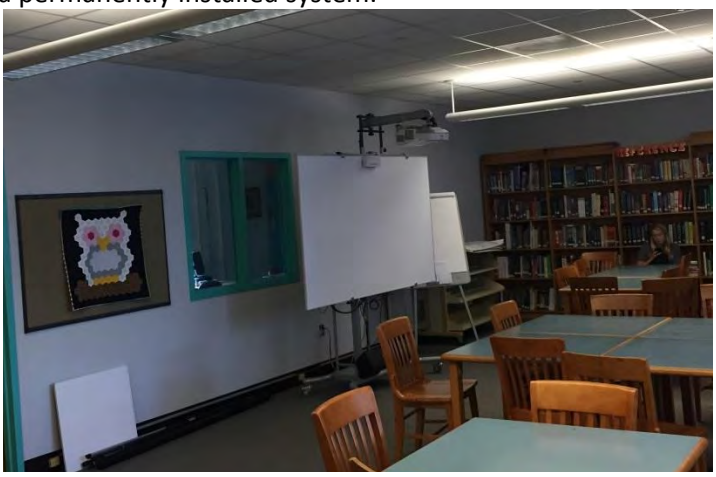

Figure 13 - Library Presentation Area

- A second portable presentation system is used for smaller group meetings in other parts of the Library.

2. Future Recommendations for Feasibility Study Options

- The audiovisual system in the Media Center, while functional, is not well integrated into the space. If the space is to be renovated, consideration should be given to integrating a video presentation system into a defined area within a new Media Center.
- A secondary portable video presentation system, consisting of a large flat panel monitor on a rolling cart, should be considered as part of the technology package for the school.

III. Freshman Academy

A. Burgoyne Theater

1. Existing Conditions

- The Burgoyne Theater has recently had its theatrical systems improved.

2. Base Repair

- Replace loudspeakers identified in Hazardous Materials report.

IV. All Buildings

A. Typical Classroom

1. Future Recommendations for Feasibility Study Options

- All classrooms should be equipment with a visual presentation system.
- Basic Visual Presentation System
  - Manual pull-down screen in front of a white board with a short-throw projector fixed to the ceiling.
  - Laptop input plate at teaching station.
  - Ceiling loudspeakers
  - AppleTV or similar for wireless presentation

- Upgraded Visual Presentation System
  - Upgraded whiteboard to include projection surface without separate screen.
  - Ultra-short throw projector at teach wall
  - Laptop input plate at teaching station.
  - Ceiling loudspeakers
  - AppleTV or similar for wireless presentation

- Touch-Sensitive Visual Presentation System
  - Large touch-sensitive flat panel display.
  - Laptop input plate at teaching station.
  - Ceiling loudspeakers
  - AppleTV or similar for wireless presentation

Lowell High School Existing Conditions Evaluation/ Civil/Environmental Permitting Report
Perkins Eastman Project #67150.00

October 21, 2016

Nitsch Engineering has performed research of the existing site conditions and anticipated site permitting requirements for the Lowell High School located at 50 Father Morissette Boulevard in Lowell, Massachusetts. Nitsch Engineering's research included an initial site visit/walk and discussions with various facilities personnel. Information included in this report is also based on record plans and compiled documents from Perkins Eastman, survey from Nitsch Engineering and Lowell Regional Wastewater Utility. Nitsch Engineering reviewed the record plans and documents in preparing this document, and discussed the nature of the infrastructure with City representatives.

A summary of our observations and findings are listed below.

EXISTING SITE UTILITIES

Lowell High School consists of five (5) buildings: Kouloheras Building, Lord/Fieldhouse Buildings, Freshman Academy and the Steam Plant. The buildings were constructed and have undergone renovations and additions from dates that range between 1892 and 1997. Based on record documents, site observations, and conversations with school officials, the summary descriptions below represent the site utility conditions/assumptions as we understand them at this time.

STORM DRAINAGE

Kouloheras Building

Based on information gathered on the site visits and existing design plans, there are several catch basins located on the westerly side of the building that connect to the existing 12-inch combined sewer line near the Merrimack Canal.

There is a 6-inch storm drain line that discharges from the approximate southerly center of the building at the alley that then discharges to an existing catch basin and then drains via an 8-inch storm drain line to the existing combined sewer system at a sewer manhole located in the sidewalk of Kirk Street.

An 8-inch storm drain line discharges from the northwest corner of the building and connects to an existing storm drain line located on the westerly side of the building near the Merrimack Canal.

There is a 4-inch foundation drain on the northerly side of the building that extends approximately 100 feet southerly on the easterly side (Kirk Street) and the westerly side (Merrimack Canal) that connects to the 12-inch combined sewer line. It appears that the current drainage system is not in compliance with the current Department of Environmental Protection (DEP) Stormwater Regulations (2008) with combined sanitary sewer and storm drain discharges from the building to combined sewer lines and should be separated out.

There are a total of four (4) downspouts that discharge on the southerly side of the building (2) and on the westerly side of the building (2). The downspouts discharge to the ground surface.

Lord/Fieldhouse Buildings

Based on information gathered on the site visits and existing design plans, the Lord Building's roof run-off is routed internally into the building and eventually into the Father Morissette Boulevard storm drain system. There is a 15-inch reinforced concrete pipe (RCP) storm drain line that appears to drain roof water from the northerly side of the Lord Building to an 18-inch RCP storm drain line located in Father Morissette Boulevard.

A 6-inch vitrified clay (VC) drain pipe appears to drain roof water from the of the Fieldhouse Building from the westerly side of the Building to combined sewer manhole located in the intersection of Father Morissette Boulevard. It appears that the current drainage system is not in compliance with the current Department of Environmental Protection (DEP) Stormwater Regulations (2008).

A third closed drainage system composed of catch basins, drain manholes and reinforced concrete pipe (RCP) collects surface stormwater from the driveway to the loading dock discharging to a manhole and then into a 12-inch storm drain line that discharges to a combined sewer system in Arnand Drive. It appears that the current drainage system is not in compliance with the current Department of Environmental Protection (DEP) Stormwater Regulations (2008).

Freshman Academy

According to the existing site documents provided by Perkins Eastman, the original building roof run-off is routed internally into the building and eventually through a single X-inch storm drain service lateral (Size to be confirmed) serves the school. The storm drain service exits the school near at the middle of the northerly side of the building and connects to an existing 18-inch combined sewer (storm drainage and sanitary sewer flows) main at a manhole located in French Street.

Steam Plant

Based on information gathered on the existing design plans, the original steam plant roof run-off is routed internally into the building and appears to discharge via two (2) 4-inch roof drain pipes into an 18-inch combined sewer line located in French Street.

WATER

Lowell High School and its makeup of five [5] buildings (Kouloheras Building, Lord/Fieldhouse Buildings, Freshman Academy and Steam Plant) is connected to the Lowell Regional Water Utility (LRWU) water system.

Kouloheras Building

There are two (2) existing 4-inch water services under the sidewalk on the easterly side of the building and connected to an existing 6-inch water main located in Kirk Street near Paige Street.

There is an existing 6-inch fire service with a post indicator valve (PIV) that connects to the southerly side of the building. The fire service connects to an existing 6-inch water main located between the Kouloheras Building and the Merrimack Canal. The fire service enters the building at a storage room near the intersection of the two wings.

There is a fire department siamese connection on the face of the building.

Currently, there are no indications from school personnel that there are issues with the domestic water and fire services for the site.

Two (2) fire hydrants were observed to be within 500 feet of the westerly side of Kouloheras Building and the Merrimack Canal.

There is a hydrant located at the corner of Kirk and Lee Streets.

Lord/Fieldhouse Buildings

There is a single 8-inch cement-lined ductile iron water service that provides both domestic and fire service to the Lord/Fieldhouse Buildings. The existing water service is installed under the sidewalk and connected to an existing 20-inch water main in French Street near its intersection with Arnand Street. The is a post indicator valve (PIV) on the existing 8-inch water service. Prior to entering the building, the 8-inch water service splits into a 6-inch fire service and a separate 6-inch domestic water service.

Currently, there are no indications from school personnel that there are issues with the domestic and fire water services for the site.

There is a fire department siamese connection observed on the face of the northwest corner of the Fieldhouse Building.

One fire hydrant was observed to be approximately 150 from the water services on French Street between the Lord/Fieldhouse Buildings.

Freshman Academy

There is an existing 4-inch domestic water service under the sidewalk and connected to an existing 6-inch water main located in Paige Street. The water line enters the building at a storage room near the intersection of the two wings.

Currently, there are no indications from school personnel that there are issues with the domestic water for the site.

There is an existing 8-inch fire service under the sidewalk and connected to an existing 6-inch water main located in Paige Street. The fire service enters the building at a storage room near the intersection of the two wings.

There is a fire department siamese connection on the face of the southerly side building on Paige Street.

One fire hydrant was observed to be greater than 300 feet on John Street located between Paige Street and French Street.

Steam Plant

Based on information gathered on the site visits and existing design plans, there is a 2-inch domestic water service located on the westerly side of the building that is connected to the existing 6-inch water main via a tunnel to the Kouloheras Building and a 4-inch fire service that is connected to the existing 6-inch water main via a tunnel to the Kouloheras Building with a double check backflow preventer in Kirk Street. The existing water service is a 6-inch diameter (type unknown) pipe installed under the entry drive and sidewalk to a 10-inch main in South Frankli

There was a fire department siamese connection observed on the face of the northwest corner of the building on French Street.

One fire hydrant was observed to be within 100 feet of the building near the intersection of French Street and Kirk Street.

SEWER

Lowell High School and its makeup of four [4] buildings (Kouloheras Building, Lord/Fieldhouse Buildings, Freshman Academy and Steam Plant) is serviced by the Lowell Regional Wastewater Utility (LRWWU) sewer system.

No exterior pumps were described or discovered during the site walk. There are internal grease traps located in the kitchen.

Kouloheras Building

According to the existing site documents, one (1) 8-inch sewer service lateral and two 6-inch sewer service laterals that serve the school. The 8-inch sewer service lateral (near the northwest corner of the building) and a 6-inch sewer service lateral (near the southwest building corner) exits on the westerly side of the building and connects to the existing 12-inch combined sewer main near the Merrimack Canal. The second 6-inch sewer service lateral exits the school on the easterly side of the building and connects to an existing 12-inch combined sewer main near Lee Street.

Lord/Fieldhouse Buildings

According to the existing site documents, there are a total four (4) sewer service laterals that serve the buildings. The first sewer service is a 6-inch vitrified clay (VC) pipe that exits the westerly side of the Fieldhouse Building and connects to a sewer manhole located in the intersection of Arnand Street and French Street. The second sewer service is a 6-inch VC pipe that exits on the northeasterly side of the Fieldhouse Building and connects to a 15-inch sewer main at an existing sewer manhole located in French

Street. The third sewer service is an 8-inch VC that exits on the northeasterly side of the Lord Building, and the fourth sewer service is a 4-inch VC pipe that exits the Lord Building approximately 10 feet from the third service. The 4-inch sewer service connects to an acid neutralization manhole that then connects to the 8-inch sewer service and connects to a 15-inch sewer main at a sewer manhole located in French Street.

Freshman Academy

According to the existing site documents provided by Perkins Eastman, a single 6-inch sewer service lateral serves the school. The sewer service exits the school near at the middle of the northerly side of the building and connects to an existing 18-inch combined sewer (storm drainage and sanitary sewer flows) main at a manhole located in French Street.

Steam Plant

According to the existing site documents provided by Perkins Eastman, a single 8-inch sewer service lateral serves the building. The sewer service exits the school and connects to the existing 18-inch combined sewer (storm drainage and sanitary sewer flows) main in French Street.

SITE CONDITIONS AND OPERATIONS

SNOW REMOVAL

Snow is plowed and stored on site where applicable.

DUMPSTERS/RECYCLING

Kouloheras Building

Dumpsters for trash and recycling were not observed at the Kouloheras Building.

Lord/Fieldhouse Buildings

Dumpsters for trash and recycling are located on the southerly side of the Lord Building at the loading dock. There are no enclosures around the dumpsters. The dumpsters are situated on a concrete slab that makes up the entire loading dock area.

Steam Plant

Trash dumpsters were observed on the northeasterly side of the Steam Plant.

Freshman Academy

Trash and recycling bins were observed at the northeast corner of the building and may be shared by Steam Plant personnel.

PRELIMINARY PERMITTING CONSIDERATIONS

WETLANDS PROTECTION ACT (310 CMR 10.00)

The Wetlands Protection Act ensures the protection of Massachusetts' inland and coastal wetlands, tidelands, great ponds, rivers, and floodplains. It regulates activities in coastal and wetlands areas, and contributes to the protection of ground and surface water quality, the prevention of flooding and storm damage, and the protection of wildlife and aquatic habitat.

A review of the Massachusetts Department of Environmental Protection (DEP) wetland layers available on the Massachusetts Geographic Information System (MassGIS), dated April 2009 indicates a wetland resource area located along the Merrimack Canal, (and more specifically located between the Kouloheras Building and Lord/Fieldhouse Buildings).

Work performed within resource areas or buffer zones will require a filing of a Notice of Intent (NOI) with the Lowell Conservation Commission and the Massachusetts Department of Environmental Protection.

It appears that any proposed work within the vicinity of the Merrimack Canal may require the filing of a Notice of Intent filing with the DEP and the Lowell Conservation Commission.

FLOOD PLAIN

Based on the Flood Insurance Rate Map (FIRM), Community Panel Numbers 25017C0139F and 25017C0143F and both dated July 7, 2014, the Merrimack Canal is in Zone A (No base flood elevations determined). The remainder of the school building sites are located in Zone X (Areas determined to be outside the 0.2% annual chance floodplain).

SURFACE WATER SUPPLY PROTECTION (310 CMR 22.20)

The Massachusetts Department of Environmental Protection (DEP) ensures the protection of surface waters used as sources of drinking water supply from contamination by regulating land use and activities within critical areas of surface water sources and tributaries and associated surface water bodies to these surface water sources.

The only water supply for the Lowell Regional Water Utility (LRWU) is the surface water from the Merrimack River, which has its source in the White Mountains of New Hampshire. The Intake Station is situated on the riverbank north of the city and water is pumped one half mile to the treatment plant. A review of the Massachusetts DEP resource layers available on the MassGIS indicates the High School is not located within a Water Supply Protection Zone, and appears to not require permitting under 310 CMR 22.20.

NATURAL HERITAGE & ENDANGERED SPECIES PROGRAM

A review of the 13th Edition of the Massachusetts Natural Heritage Atlas prepared by the Natural Heritage and Endangered Species Program (NHESP), dated October 1, 2008, indicates that the High School site is NOT located within a Priority Habitat of Rare Species or an Estimated Habitat of Rare Wildlife and that there are no vernal pools on or adjacent to the site. It does not appear that the project will require NHESP review.

AREA OF CRITICAL ENVIRONMENTAL CONCERN (ACEC)

A review of the Massachusetts Geographic Information System (MassGIS) dated April 2009, indicates that the site is NOT located within any Area of Critical Environmental Concern.

US EPA NPDES

Construction activities that disturb more than one acre are regulated under the United States Environmental Protection Agency's (EPA) National Pollution Discharge Elimination System (NPDES) Program. In Massachusetts, the USEPA issues NPDES permits to operators of regulated construction sites. Regulated projects are required to develop and implement stormwater pollution prevention plans in order to obtain permit coverage. The permitting requirement will need to be determined based upon future design options.

SEWER CONNECTION PERMIT (314 CMR 7.00)

New connections to sanitary sewers, increases in flow to existing sanitary sewers, and discharges from businesses that are not considered to be "industrial wastewater" are subject to state requirements based on their expected discharge volume:

- Discharges ≤ 15,000 gallons per day (gpd) will need only local approvals (no approvals by MassDEP)
- Discharges >15,000 gpd but ≤ 50,000 gpd must file a one-time certification statement with MassDEP within 60 days after the connection starts to be used
- Discharges of > 50,000 gpd must obtain a MassDEP permit before construction

Due to the existing sewer flows from the buildings to be maintained or to increase slightly, no permitting is expected to occur. Any new sewer services may require permitting (street opening, sewer connection fee) from the City of Lowell.

PERMITTING TABLE TIMELINE

Permit	Permitting Authority	Anticipated Filing Date	Anticipated Approval Date
Notice of Intent (Order of Conditions)	MassDEP & City of Lowell Conservation Commission	After 100% DD	Approval in 3 to 6 months
Planning Board Site Plan Review (If Required)	City of Lowell Planning Board	From SD to DD	Up to 6 months+
National Pollutant Discharge Elimination System (NPDES) with EPA Notice of Intent (NOI)	Environmental Protection Agency (EPA)	After 100% CD	Once Submitted; Close NOI at end of Construction

RECOMMENDATIONS

SUSTAINABLE SITE POSSIBILITIES

A new or reconstructed building provides opportunities to incorporate sustainable features which may help achieve LEED for Schools points for funding.

Bio-Swales are grassed channels that capture runoff from parking lot and walkway that remove sediment from stormwater. Bio-swales can be used throughout the site, primarily along parking lot edges and access roads.

Rain Gardens use soils, plants, and microbes to treat stormwater before it is infiltrated and or discharged. Rain gardens are shallow depressions filled with sandy soil topped with a thick layer of mulch and planted with dense vegetation. Rain gardens can be utilized in parking islands and within the site to treat pavement run-off.

Rain Garden

Porous Pavement and Porous Concrete

Porous Pavement is a paved surface with a higher than normal percentage of air voids to allow water to pass through it and infiltrate in the subsoil. Porous pavement, like all drainage systems, requires maintenance at least twice per year.

Subsurface Structures are underground systems that capture run-off (usually rooftop) and gradually infiltrate it into the groundwater. This method of infiltrating stormwater saves space by placing the system under parking lots or fields.

Based on the Natural Resources Conservation Service (NRCS) Web Soil Survey (2011) and record information, it appears that the site will have challenges providing a cost effective solution for stormwater infiltration into the ground.

Opportunities for rainwater reuse are possible at a renovated or expanded Lowell High School. However, the initial capital required for tanks, pumps and dual plumbing may be prohibitive in providing payback for water reuse.

SANITARY SEWER

Section 15.230 (1) of the State Environmental Code (310 CMR 15.000) [Title V] states, “Grease traps shall be provided for kitchen flows at restaurants, nursing homes, schools, hospitals and other facilities from which grease can be expected to be discharged.” Nitsch Engineering understands that there are only internal grease traps in the cafeterias. Exterior grease traps conforming to 310 CMR 15.000 should be installed where there are cafeterias.

The existing combined sewer (sanitary sewer and storm drainage) lines that discharge from the sites that include catch basins and roof drains from the site and building should be separated into sanitary sewer and storm drain lines.

NOTES TO USERS

This map is for use in administering the National Flood Insurance Program. It does not necessarily identify all areas subject to flooding, particularly from local drainage sources of small size. The **community map repository** should be consulted for possible updated or additional flood hazard information.

To obtain more detailed information in areas where **Base Flood Elevations** (BFEs) and/or **floodways** have been determined, users are encouraged to consult the Flood Profiles and Floodway Data and/or Summary of Stillwater Elevations tables contained within the Flood Insurance Study (FIS) Report that accompanies this FIRM. Users should be aware that BFEs shown on the FIRM represent rounded whole-foot elevations. These BFEs are intended for flood insurance rating purposes only and should not be used as the sole source of flood elevation information. Accordingly, flood elevation data presented in the FIS Report should be utilized in conjunction with the FIRM for purposes of construction and/or floodplain management.

Boundaries of the **floodways** were computed at cross-sections and interpolated between cross-sections. The floodways were based on hydraulic considerations with regard to requirements of the National Flood Insurance Program. Floodway widths and other pertinent floodway data are provided in the Flood Insurance Study Report for this jurisdiction.

Certain areas not in Special Flood Hazard Areas may be protected by **flood control structures**. Refer to Section 2.4 "Flood Protection Measures" of the Flood Insurance Study Report for information on flood control structures for this jurisdiction.

The **projection** used in the preparation of this map was Massachusetts State Plane Mainland Zone (FIPS zone 2001). The **horizontal datum** was NAD 83, GRS 1980 spheroid. Differences in datum, spheroid, projection or UTM zones used in the production of FIRMs for adjacent jurisdictions may result in slight positional differences in map features across jurisdiction boundaries. These differences do not affect the accuracy of this FIRM.

Flood elevations on this map are referenced to the North American Vertical Datum of 1988. These flood elevations must be compared to structure and ground elevations referenced to the same **vertical datum**. For information regarding conversion between the National Geodetic Vertical Datum of 1929 and the North American Vertical Datum of 1988, visit the National Geodetic Survey website at http://www.ngs.noaa.gov or contact the National Geodetic Survey at the following address:

NGS Information Services
NOAA, N/NGS12
National Geodetic Survey
SSMC-3, #9202
1315 East-West Highway
Silver Spring, Maryland 20910-3282
(301) 713-3242

To obtain current elevation, description, and/or location information for **bench marks** shown on this map, please contact the Information Services Branch of the National Geodetic Survey at **(301) 713- 3242**, or visit its website at http://www.ngs.noaa.gov.

Base map information shown on this FIRM was derived from orthophotography provided by MassGIS at a scale of 1:500 from photography dated April 2008.

The **profile baselines** depicted on this map represent the hydraulic modeling baselines that match the flood profiles in the FIS report. As a result of improved topographic data, the **profile baseline**, in some cases, may deviate significantly from the channel centerline or appear outside the SFHA.

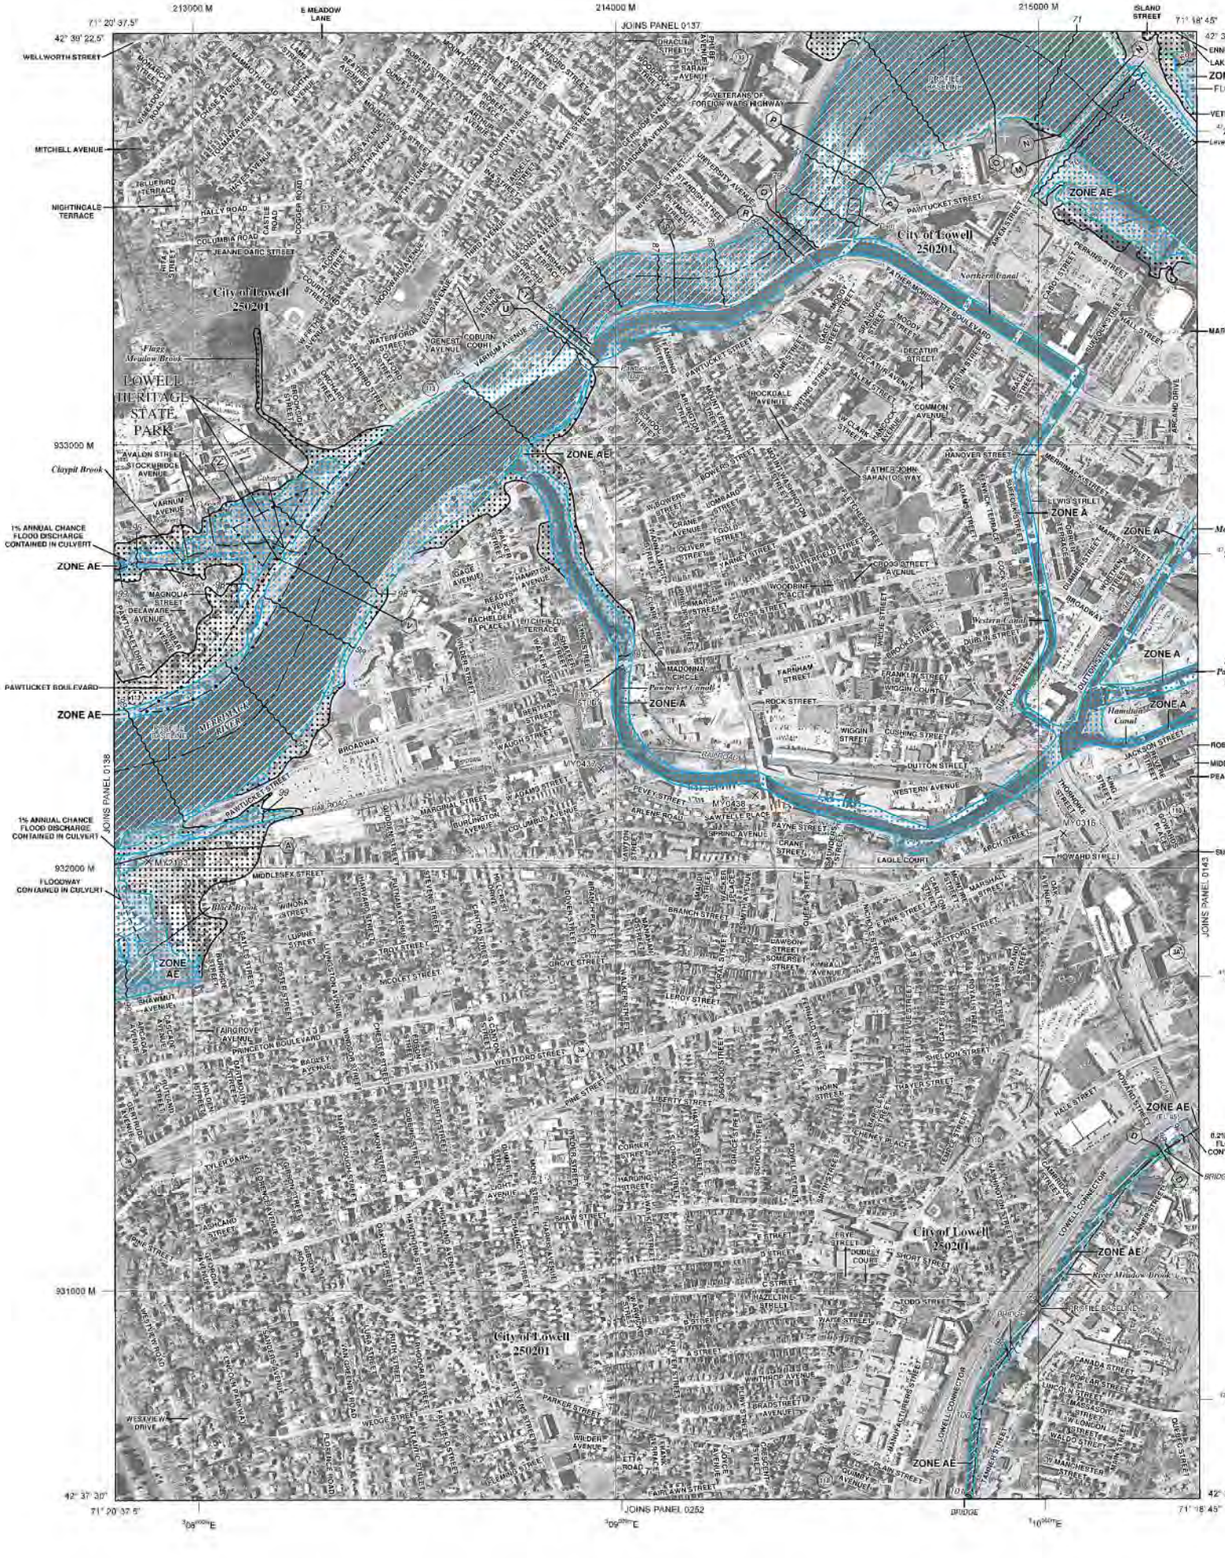
This map reflects more detailed and up-to-date **stream channel configurations** than those shown on the previous FIRM for this jurisdiction. The floodplains and floodways that were transferred from the previous FIRM may have been adjusted to conform to those new stream channel configurations. As a result, the Flood Profiles and Floodway Data tables for multiple streams in the Flood Insurance Study Report (which contains authoritative hydraulic data) may reflect stream channel distances that differ from what is shown on this map.

Corporate limits shown on this map are based on the best data available at the time of publication. Because changes due to annexations or de-annexations may have occurred after this map was published, map users should contact appropriate community officials to verify current corporate limit locations.

Please refer to the separately printed **Map Index** for an overview map of the county showing the layout of map panels; community map repository addresses; and a Listing of Communities table containing National Flood Insurance Program dates for each community as well as a listing of the panels on which each community is located.

For information on available products associated with this FIRM visit the **Map Service Center (MSC)** website at http://msc.fema.gov. Available products may include previously issued Letters of Map Change, a Flood Insurance Study Report, and/or digital versions of this map. Many of these products can be ordered or obtained directly from the MSC website.

If you have **questions about this map**, how to order products, or the National Flood Insurance Program in general, please call the **FEMA Map Information eXchange (FMIX)** at **1-877-FEMA-MAP** (1-877-336-2627) or visit the FEMA website at http://www.fema.gov/business/nfip.



LEGEND

SPECIAL FLOOD HAZARD AREAS (SFHAs) SUBJECT TO INUNDATION BY THE 1% ANNUAL CHANCE FLOOD

The 1% annual chance flood (100-year flood), also known as the base flood, is the flood that has a 1% chance of being equaled or exceeded in any given year. The Special Flood Hazard Area is the area subject to flooding by the 1% annual chance flood. Areas of Special Flood Hazard include Zones A, AE, AH, AO, AR, A99, V, and VE. The Base Flood Elevation is the water-surface elevation of the 1% annual chance flood.

- ZONE A — No Base Flood Elevations determined.
- ZONE AE — Base Flood Elevations determined.
- ZONE AH — Flood depths of 1 to 3 feet (usually areas of ponding); Base Flood Elevations determined.
- ZONE AO — Flood depths of 1 to 3 feet (usually sheet flow on sloping terrain); average depths determined. For areas of alluvial fan flooding, velocities also determined.
- ZONE AR — Special Flood Hazard Areas formerly protected from the 1% annual chance flood by a flood control system that was subsequently decertified. Zone AR indicates that the former flood control system is being restored to provide protection from the 1% annual chance or greater flood.
- ZONE A99 — Area to be protected from 1% annual chance flood by a Federal flood protection system under construction; no Base Flood Elevations determined.
- ZONE V — Coastal flood zone with velocity hazard (wave action); no Base Flood Elevations determined.
- ZONE VE — Coastal flood zone with velocity hazard (wave action); Base Flood Elevations determined.

FLOODWAY AREAS IN ZONE AE

The floodway is the channel of a stream plus any adjacent floodplain areas that must be kept free of encroachment so that the 1% annual chance flood can be carried without substantial increases in flood heights.

OTHER FLOOD AREAS

- ZONE X — Areas of 0.2% annual chance flood; areas of 1% annual chance flood with average depths of less than 1 foot or with drainage areas less than 1 square mile; and areas protected by levees from 1% annual chance flood.

OTHER AREAS

- ZONE X — Areas determined to be outside the 0.2% annual chance floodplain.
- ZONE D — Areas in which flood hazards are undetermined, but possible.

COASTAL BARRIER RESOURCES SYSTEM (CBRS) AREAS

OTHERWISE PROTECTED AREAS (OPAs)

CBRS areas and OPAs are normally located within or adjacent to Special Flood Hazard Areas.

- 1% Annual Chance Floodplain Boundary
- 0.2% Annual Chance Floodplain Boundary
- Floodway boundary
- Zone D boundary
- CBRS and OPA boundary
- Boundary dividing Special Flood Hazard Area Zones and boundary dividing Special Flood Hazard Areas of different Base Flood Elevations, flood depths, or flood velocities.
- 513 — Base Flood Elevation line and value; elevation in feet*
- (EL 987) — Base Flood Elevation value where uniform within zone; elevation in feet*

*Referenced to the North American Vertical Datum of 1988

- A — A — Cross section line
- 23 — 23 — Transect line
- 45° 02' 08", 93° 02' 12" — Geographic coordinates referenced to the North American Datum of 1983 (NAD 83) Western Hemisphere
- 4688000 M — 1000-meter ticks: Massachusetts State Plane Mainland Zone (FIPS Zone 2001), Lambert Conformal Conic projection
- 1000-meter Universal Transverse Mercator grid values, zone 19
- DX5510 — Bench mark (see explanation in Notes to Users section of this FIRM panel)
- M1.5 — River Mile

NOTES TO USERS

This map is for use in administering the National Flood Insurance Program. It does not necessarily identify all areas subject to flooding, particularly from local drainage sources of small size. The **community map repository** should be consulted for possible updated or additional flood hazard information.

To obtain more detailed information in areas where **Base Flood Elevations** (BFEs) and/or **floodways** have been determined, users are encouraged to consult the Flood Profiles and Floodway Data and/or Summary of Stillwater Elevations tables contained within the Flood Insurance Study (FIS) Report that accompanies this FIRM. Users should be aware that BFEs shown on the FIRM represent rounded whole-foot elevations. These BFEs are intended for flood insurance rating purposes only and should not be used as the sole source of flood elevation information. Accordingly, flood elevation data presented in the FIS Report should be utilized in conjunction with the FIRM for purposes of construction and/or floodplain management.

Boundaries of the **floodways** were computed at cross-sections and interpolated between cross-sections. The floodways were based on hydraulic considerations with regard to requirements of the National Flood Insurance Program. Floodway widths and other pertinent floodway data are provided in the Flood Insurance Study Report for this jurisdiction.

Certain areas not in Special Flood Hazard Areas may be protected by **flood control structures**. Refer to Section 2.4 "Flood Protection Measures" of the Flood Insurance Study Report for information on flood control structures for this jurisdiction.

The **projection** used in the preparation of this map was Massachusetts State Plane Mainland Zone (FIPS zone 2001). The **horizontal datum** was NAD 83, GRS 1980 spheroid. Differences in datum, spheroid, projection or UTM zones used in the production of FIRMs for adjacent jurisdictions may result in slight positional differences in map features across jurisdiction boundaries. These differences do not affect the accuracy of this FIRM.

Flood elevations on this map are referenced to the North American Vertical Datum of 1988. These flood elevations must be compared to structure and ground elevations referenced to the same **vertical datum**. For information regarding conversion between the National Geodetic Vertical Datum of 1929 and the North American Vertical Datum of 1988, visit the National Geodetic Survey website at http://www.ngs.noaa.gov or contact the National Geodetic Survey at the following address:

NGS Information Services
NOAA, N/NGS12
National Geodetic Survey
SSMC-3, #9202
1315 East-West Highway
Silver Spring, Maryland 20910-3282
(301) 713-3242

To obtain current elevation, description, and/or location information for **bench marks** shown on this map, please contact the Information Services Branch of the National Geodetic Survey **at (301) 713- 3242**, or visit its website at http://www.ngs.noaa.gov.

Base map information shown on this FIRM was derived from orthophotography provided by MassGIS at a scale of 1:500 from photography dated April 2008.

The **profile baselines** depicted on this map represent the hydraulic modeling baselines that match the flood profiles in the FIS report. As a result of improved topographic data, the **profile baseline**, in some cases, may deviate significantly from the channel centerline or appear outside the SFHA.

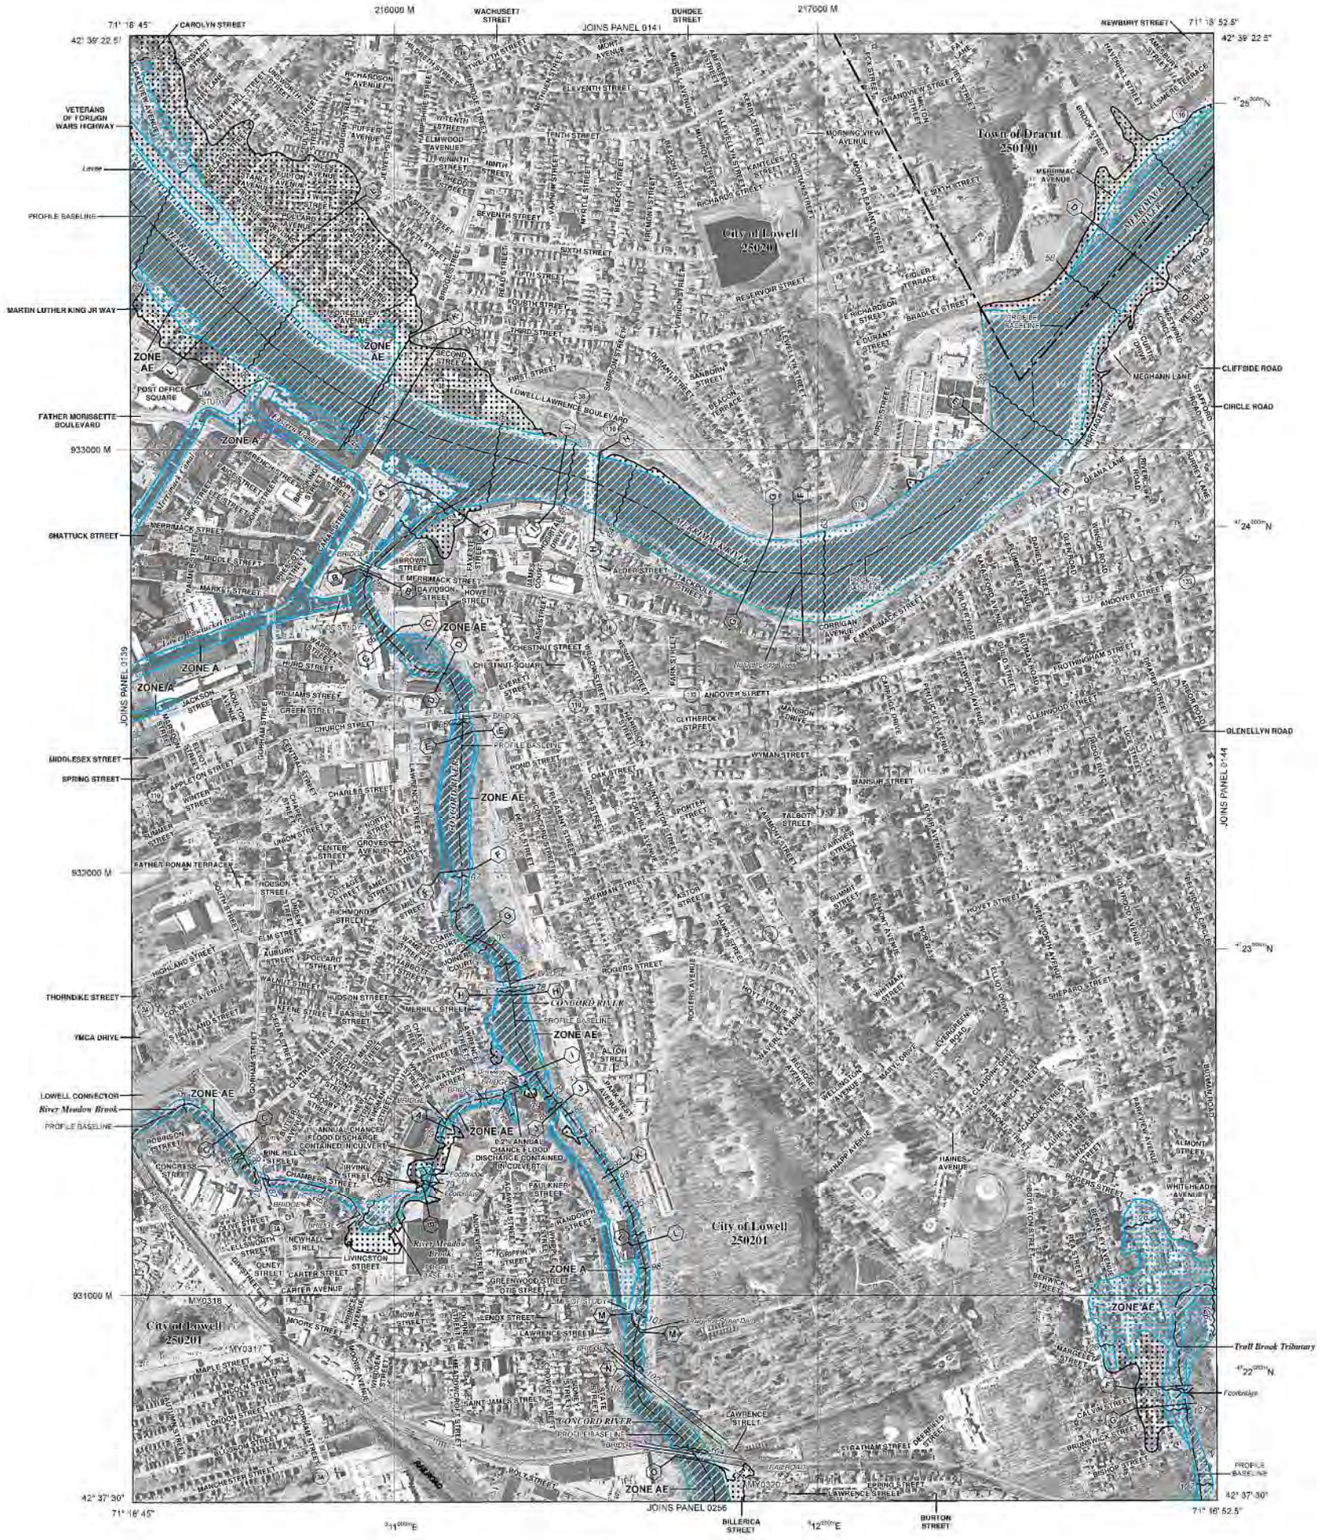
This map reflects more detailed and up-to-date **stream channel configurations** than those shown on the previous FIRM for this jurisdiction. The floodplains and floodways that were transferred from the previous FIRM may have been adjusted to conform to those new stream channel configurations. As a result, the Flood Profiles and Floodway Data tables for multiple streams in the Flood Insurance Study Report (which contains authoritative hydraulic data) may reflect stream channel distances that differ from what is shown on this map.

Corporate limits shown on this map are based on the best data available at the time of publication. Because changes due to annexations or de-annexations may have occurred after this map was published, map users should contact appropriate community officials to verify current corporate limit locations.

Please refer to the separately printed **Map Index** for an overview map of the county showing the layout of map panels; community map repository addresses; and a Listing of Communities table containing National Flood Insurance Program dates for each community as well as a listing of the panels on which each community is located.

For information on available products associated with this FIRM visit the **Map Service Center (MSC)** website at http://msc.fema.gov. Available products may include previously issued Letters of Map Change, a Flood Insurance Study Report, and/or digital versions of this map. Many of these products can be ordered or obtained directly from the MSC website.

If you have **questions about this map**, how to order products, or the National Flood Insurance Program in general, please call the **FEMA Map Information eXchange (FMIX)** at **1-877-FEMA-MAP** (1-877-336-2627) or visit the FEMA website at http://www.fema.gov/business/nfip.



LEGEND

SPECIAL FLOOD HAZARD AREAS (SFHAs) SUBJECT TO INUNDATION BY THE 1% ANNUAL CHANCE FLOOD

The 1% annual chance flood (100-year flood), also known as the base flood, is the flood that has a 1% chance of being equaled or exceeded in any given year. The Special Flood Hazard Area is the area subject to flooding by the 1% annual chance flood. Areas of Special Flood Hazard include Zones A, AE, AH, AO, AR, A99, V, and VE. The Base Flood Elevation is the water-surface elevation of the 1% annual chance flood.

- **ZONE A** — No Base Flood Elevations determined.
- **ZONE AE** — Base Flood Elevations determined.
- **ZONE AH** — Flood depths of 1 to 3 feet (usually areas of ponding); Base Flood Elevations determined.
- **ZONE AO** — Flood depths of 1 to 3 feet (usually sheet flow on sloping terrain); average depths determined. For areas of alluvial fan flooding, velocities also determined.
- **ZONE AR** — Special Flood Hazard Area formerly protected from the 1% annual chance flood by a flood control system that was subsequently decertified. Zone AR indicates that the former flood control system is being restored to provide protection from the 1% annual chance or greater flood.
- **ZONE A99** — Area to be protected from 1% annual chance flood by a Federal flood protection system under construction; no Base Flood Elevations determined.
- **ZONE V** — Coastal flood zone with velocity hazard (wave action); no Base Flood Elevations determined.
- **ZONE VE** — Coastal flood zone with velocity hazard (wave action); Base Flood Elevations determined.

FLOODWAY AREAS IN ZONE AE

The floodway is the channel of a stream plus any adjacent floodplain areas that must be kept free of encroachment so that the 1% annual chance flood can be carried without substantial increases in flood heights.

OTHER FLOOD AREAS

- **ZONE X** — Areas of 0.2% annual chance flood; areas of 1% annual chance flood with average depths of less than 1 foot or with drainage areas less than 1 square mile; and areas protected by levees from 1% annual chance flood.

OTHER AREAS

- **ZONE X** — Areas determined to be outside the 0.2% annual chance floodplain.
- **ZONE D** — Areas in which flood hazards are undetermined, but possible.

Introduction

The existing Lowell High School is a campus style high school located at 50 Father Morissette Boulevard in Lowell, Massachusetts. The campus includes the following buildings:

- Field House
- Lord Building
- Kouloheras Building
- Freshman Academy Building
- Steam Plant Building

The Freshman Academy and Steam Plant Buildings are separate, stand-alone buildings. The Field House, Lord and Kouloheras Buildings are connected.

The buildings currently contains classrooms, labs, cafeteria, auditorium, and a library for students in grades 9-12. This code summary is based on existing architectural drawings received August 16 & 17, 2016 and a site visit conducted August 24, 2016. Following is a list of applicable codes:

Code Type	Applicable Code (Model Code Basis)
Building	780 CMR: Massachusetts State Building Code, 8th Edition[1] (2009 International Building Code) (2009 International Existing Building Code)
Fire Prevention	527 CMR: Massachusetts Fire Prevention Regulations (2012 NFPA 1)
Accessibility	521 CMR: Massachusetts Architectural Access Board Regulations
Electrical	527 CMR 12.00: Massachusetts Electrical Code (2014 National Electrical Code)[2]
Elevators	524 CMR: Massachusetts Elevator Code (2004 ASME A17.1)
Mechanical	2009 International Mechanical Code (IMC)
Plumbing	248 CMR: Massachusetts Plumbing Code
Energy Conservation	2012 International Energy Conservation Code[3]

1 The 9th edition of 780 CMR based on the 2015 International Codes is expected to go into effect in mid-2017.
2 The 2017 NEC is expected to take effect in January 2017 and is based on the date the electrical permit is issued, not the building permit.
3 The 2015 IECC has been adopted and will be required to be met January 1, 2017.

International Existing Building Code

The 2009 International Existing Building Code with Massachusetts amendments allows for 3 separate compliance methods, the Prescriptive Method (in general, altered areas must comply with the code for new construction), Work Area Method (level of compliance is based on the classification of work), and Performance Compliance Method (numerical method that allows tradeoffs for deficiencies). This report is based on the Work Area Method.

1. Work Area and Classification of Work:

It is our understanding that the proposed work will likely include renovations throughout the entire interior of the buildings, installation of new MEP systems throughout, as well as the potential for an addition to the building(s). For the purposes of this report it has been assumed that the scope of work is likely to be classified as Level 3 (the highest level of renovation). This level includes the reconfiguration of spaces, the addition or elimination of doors and windows, the reconfiguration or extension of systems, and/or the installation of additional equipment in more than 50% of the aggregate area of the building. The work must comply with the following IEBC Chapters based on the level of work in each building:

Level 2 Alteration: IEBC Chapters 6 & 7
Level 3 Alternation: IEBC Chapters 6, 7 & 8
Addition: IEBC Chapter 10

2. Occupancy Classification:

Field House:

Non-Separated Mixed Uses:
- A-3 (Exercise Areas and Locker Rooms)
- A-4 (Gymnasium and Pool with Spectator Seating)

Lord Building:

Non-Separated Mixed Uses:
- E (Secondary Education)
- A-2 (Cafeteria)
- A-3 (Library and Assembly Areas)

Kouloheras Building:

Non-Separated Mixed Uses:
- E (Secondary Education)
- A-1 (Auditorium)

Freshman Academy Building:

Non-Separated Mixed Uses:
- E (Secondary Education)
- A-3 (Multipurpose Spaces)

Steam Plant Building:

- U (Utility Building)

3. Construction Type:

Field House:

Based on conditions observed during our site visit, the Field House building appears to be constructed with CMU walls and unprotected structural steel members resulting in Type IIB construction (noncombustible, no fire-resistance rating).

Lord Building:

Based on conditions observed during our site visit, the Lord building appears to be constructed with CMU walls and unprotected structural steel members resulting in Type IIB construction (noncombustible, no fire-resistance rating).

Kouloheras Building:

Based on conditions observed during our site visit, the Kouloheras building appears to be constructed with various construction materials including concrete, wood and steel structure and masonry exterior wall resulting in a minimum of Type IIIB construction (combustible interior- no fire-resistance rating; 2-hour noncombustible exterior wall). The addition at the front of the building had spray-on fireproofing on the structure, therefore the construction type could potentially be Type IIIA (combustible interior- 1-hour fire-resistance rating; 2-hour noncombustible exterior wall),

Freshman Academy Building:

Based on conditions observed during our site visit, the Freshman Academy building appears to be constructed with various construction materials including concrete, wood and steel structure and masonry exterior wall resulting in a minimum of Type IIIB construction (combustible interior- no fire-resistance rating; 2-hour noncombustible exterior wall).

Steam Plant Building:

Based on conditions observed during our site visit, the Steam Plant building appears to be constructed with CMU walls and unprotected structural steel members resulting in Type IIB construction (noncombustible, no fire-resistance rating).

If the project includes expanding footprint, the project would include an addition and need to comply with the area limitations for new construction (IEBC 1002.2). Compliance with the height limits would not be required unless the height of the building is increased (IEBC 1002.1).

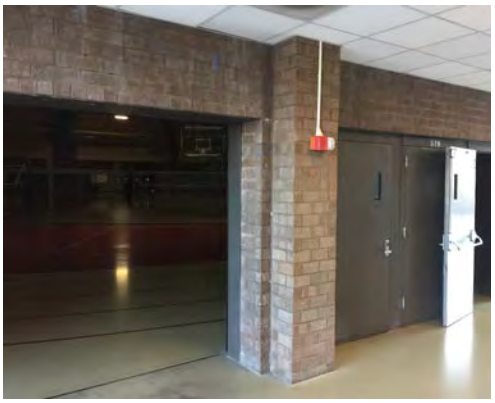
1002.1 Height limitations. No *addition* shall increase the height of an *existing building* beyond that permitted under the applicable provisions of Chapter 5 of the *International Building Code* for new buildings.

1002.2 Area limitations. No *addition* shall increase the area of an *existing building* beyond that permitted under the applicable provisions of Chapter 5 of the *International Building Code* for new buildings unless fire separation as required by the *International Building Code* is provided.

Due to the size, use and construction type of the Field House, Lord, Kouloheras and Freshman Academy Buildings, an addition cannot be added unless it is separated by a firewall creating two separate buildings. The Steam Plant Building is permitted to have an addition built. If an addition is planned for the Steam Plant Building, the height and area limitations must be reviewed based on frontage and sprinkler system area increases.

Building Separation:

The Field House and Lord Building are connected but appear to have a rated wall separating them and could be considered separate buildings. The Kouloheras and Lord Buildings are connected via a pedestrian walkway and could be considered as separate building if needed (if addition is built to one building) but would require additional smoke rated doors at the end of the walkway. The Freshman Academy and Steam Plant buildings are stand-alone buildings.



Fire Doors and Shutter at Field House

4. Fire Resistance Ratings:

The following table summarizes the required fire resistance ratings for the building elements of Type IIIB & IIB construction, based on 780 CMR Table 601 and other applicable code provisions:

Building Element	Fire Resistance Rating (Hrs)	Fire Resistance Rating (Hrs)
	Type IIIB	Type IIB
Primary Structural Frame[A]	0	0
Exterior Bearing Walls including columns along the exterior wall	2	0

Exterior Non-Bearing Walls	Based on FSD	
Interior Bearing Walls	0	0
Floor Construction	0	0
Roof Construction	0	0

A. Includes beams, trusses, floor members, etc. having a direct connection to the columns (780 CMR 202).

Building Element	**Fire Resistance Rating (Hrs)**	**Opening Protectives (Hrs)**
Exit Access Corridors (780 CMR 1018.1)	0	0
Existing 3 stories or less Stair, Mechanical, and Elevator Shafts (IEBC 703.2.1 Exc. 6)	Maintain Existing	Maintain Existing
Existing 4 story Stair, Mechanical, and Elevator Shafts (IEBC 703.2.1)	1	1
New shafts: (780 CMR 708.4) 3 stories or less: 4 stories:	 1[A] 2	 ¾ 1½
Building Separation (780 CMR Table 706.4) (Between Field House and Lord Building)	2	1½
Emergency Electrical Room (527 CMR 12.00 700-9(D)(1))	2	1½

A. In lieu of rated shaft enclosure, if the duct connects not more than two stories, the annular space around the penetrating duct may be protected by approved noncombustible material that resists the passage of flames and smoke. If the duct connects not more than three stories, the duct also needs to have fire dampers installed at each floor line (780 CMR 716.6.1).

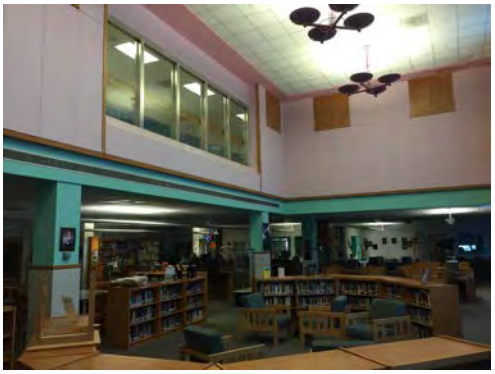
5. Vertical Openings:

Based on the plans reviewed and observations from the site visit, all vertical openings appear to be unenclosed with a shaft enclosure. Where the building contains unprotected floor opening they must be brought into compliance with IEBC 703.2.1 if they are included in the work area. The floor openings would be considered part of the work area if the project includes reconfiguration of any of these spaces per the following definition:

WORK AREA. That portion or portions of a building consisting of all reconfigured spaces as indicated on the construction documents. Work area excludes other portions of the building where incidental work entailed by the intended work must be performed and portions of the building where work not initially intended by the owner is specifically required by this code.

Existing floor openings connecting 3 stories or less are permitted to remain unenclosed if contained within a fully sprinklered building (IEBC 703.2.1 Exc. 6). The following vertical openings were observed:

- The library in the Lord Building contains a 2-story space connecting the 2nd and 3rd levels. However the 3rd story appears to be separated from the library and the 2nd floor by fire-rated glass. The rating of the glass should be reviewed if this area is included within the work area.



Rated Glass at Upper Level of Lib.

- The teacher's center is located on a mezzanine level on the 3rd level of the Kouloheras Building and contains a 2-story opening. This opening is permitted to be unenclosed if it meets all the requirements of a mezzanine since 780 CMR 708.2 Exception 9 allows mezzanines to be open to the floor below. For new construction mezzanines cannot exceed 1/3 of the area of the "room below", however in past building codes mezzanines were permitted to be up to 1/3 of the area of the story below. Although in this case the mezzanine may not be less than 1/3 the area of the room below, in the past typically building officials have allowed existing mezzanines to continue to be considered as a mezzanine under the prior area limitation based on the story below. Although it is subject to interpretation by the building official if this area is renovated, in our opinion it is likely the current configuration of a single-exit mezzanine would be permitted to remain.

- The unenclosed stair connecting the 1st and 2nd levels of the Lord Building by the main entrance is permitted to remain as an open exit access stair in accordance with 780 CMR Section 1016.1 Exception 4.

6. Interior Finishes:

The existing interior finish of walls and ceilings in the work area and in all exits and corridors serving the work area must comply with the code requirements for new construction (IEBC 703.4, 803.3). All newly installed wall and ceiling finishes, and interior trim materials must also comply with 780 CMR Table 803.9 (IEBC 602.1, 602.2, 602.3). The requirements are summarized below:

Walls & Ceilings (IBC Table 803.9) – Fully Sprinklered

Use Group:	E	A
Exit Enclosures	Class B	Class B
Exit Access Corridors	Class C	Class B
Rooms & Enclosed Spaces	Class C	Class C

Walls & Ceilings (IBC Table 803.9) – Not Sprinklered (Field House)

Use Group:	A
Exit Enclosures	Class A
Exit Access Corridors	Class A
Rooms & Enclosed Spaces	Class C

Note that where exit stairs and exit access corridors serve more than one use group, the most restrictive interior finish is required. Based on our site visit, the existing interior finishes appeared to comply for all buildings.

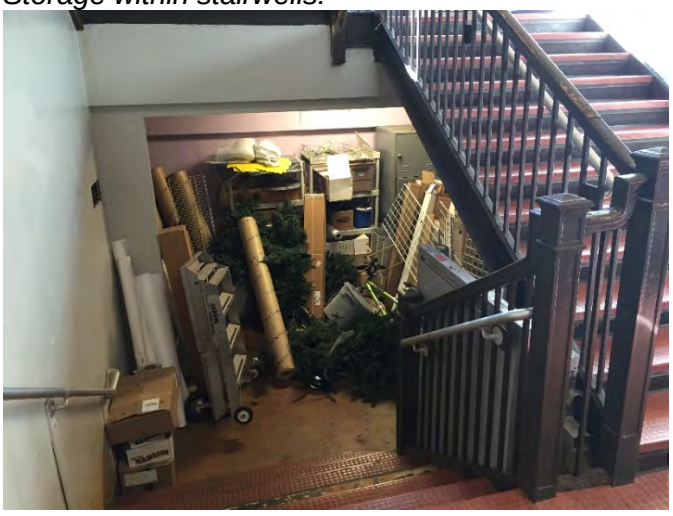
7. Means of Egress:

The means of egress including the number of exits and egress capacity must be sufficient for the number of occupants on all floors (780 CMR 102.6.4). All means of egress are required to be maintained.

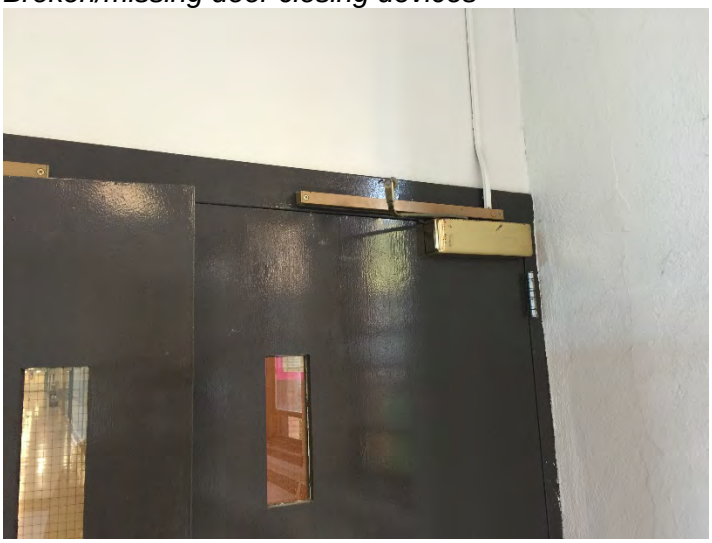
The means of egress for the existing buildings appears sufficient for the current occupant load of the buildings. However, once renovation plans have been developed, the means of egress within the building can be further evaluated based on the calculated occupant load.

Based on observations during our site visit, there were areas of the means of egress that were not properly maintained including the following conditions that occurred throughout the buildings:

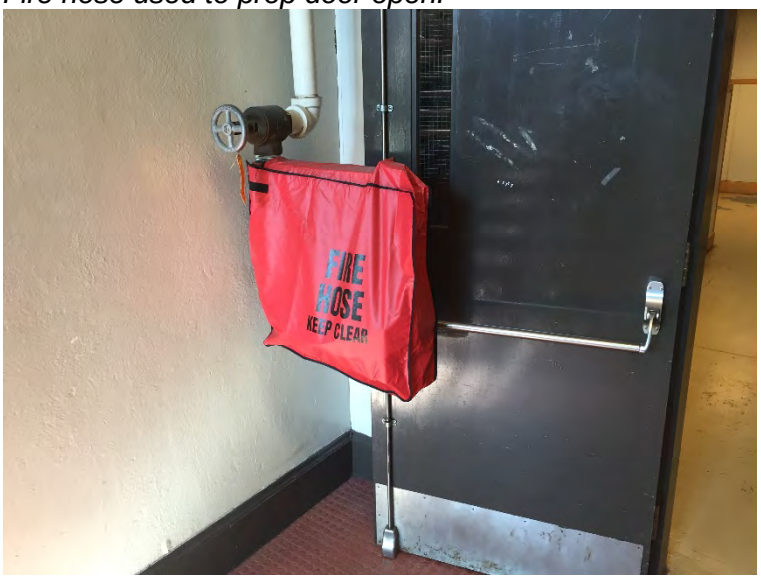
- *Storage within stairwells:*



- *Broken/missing door closing devices*



- *Fire hose used to prop door open.*



General Egress Requirements

Since the buildings are a single-tenant occupancy the means of egress provisions in the IEBC do not apply, however the building must maintain or improve their current level of egress (IEBC 604.1 & 705.1). As long as they are adequately maintained, existing means of egress stairs (including guardrails) and other elements can continue to serve as required egress regardless of their level of compliance with the code for new construction and regardless of the level of renovation (although see below for access code requirements for stair handrails and nosings). The only additional egress requirements are for lighting and exit signs based on the following sections from 780 CMR:

7.1 Illuminated exit signs and means-of-egress lighting must be provided throughout the building regardless of work area limitations (780 CMR 102.6.4).

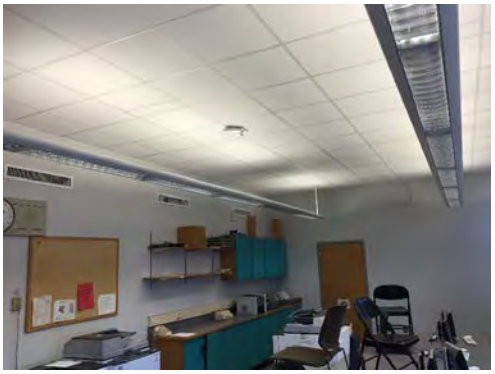
7.2 All means of egress lighting and exit signs must be provided with an emergency power supply to assure continued illumination for not less than 1.5 hours in case of primary power loss (780 CMR 102.6.4, 1006.1 & 1011.1).

All of the buildings appeared to be provided with fairly good exit sign coverage. The emergency lighting was no evaluated. When the building is renovated the exit sign and egress lighting must be upgraded to accommodate any future layouts.

8. Required Fire Protection Systems:

The following fire protection systems are required to maintained and provided:

- Automatic sprinkler system (IEBC 704.2.2 & MGL c. 148 s. 26G). *The Lord, Kouloheras and Freshman Academy buildings appear to be fully sprinklered. The Field House is not provided with sprinklers. The presence of sprinklers could not be confirmed in the Steam Plant building however a sprinkler system would not be required even for new construction due to the use of the building. A sprinkler system must be installed throughout the Field House if the work area exceeds 50% of the floor area. Full sprinkler protection could also be required by MGL c. 148 s. 26G (see below). A portion of the third floor of the Kouloheras building where the mezzanine (teacher center) was built above is not provided with sprinklers. The sprinkler system is required to be altered as the configuration of the building changes.*



Unsprinklered Teachers Work Room Space in Kouloheras

- Fire Alarm (IEBC 704.4.1 & 804.2) – the IEBC allows existing previously approved fire alarm systems to remain regardless of the level of renovation. However full compliance with the MA Architectural Access Board's Regulations (see below) will require a compliant fire alarm system. *The existing buildings currently contain a fire alarm system with deficient notification device coverage (no strobes in classrooms). Note that the fire alarm system must also be altered as necessary in the new construction areas to reflect the new configuration and comply with NFPA 72.*

- Fire extinguishers (527 CMR 1 Section 13.6) *Fire extinguishers must be located throughout the building so that the maximum travel distance to an extinguisher is less than 75 feet (527 CMR 1, Table 13.6.2(a)). All buildings were provided with fire extinguishers with the exception of possibly the Steam Plant Building, however a comprehensive survey of the fire extinguishers was not conducted. Use Group U buildings are not required to be provided with fire extinguishers.*

M.G.L. Chapter 148 Section 26G
Since the Field House building is over 7,500 gross square feet in area, it is subject to the requirements of M.G.L. Chapter 148 Section 26G. These amendments require the entire building to be provided with sprinkler protection if the renovations are considered "major". Note that since the Steam Plant Building is less than 7,500 square feet, M.G.L. Chapter 148 Section 26G is not applicable.

Renovations are considered major depending on the type of work and the scope / cost of work. The following are general guidelines established by the board to be used to determine if the scope or the cost of the planned alterations are major:

1. *Major alterations are reasonably considered major in scope when such work over a 5 year period affects **33% or more of the total gross square footage of the building** (measured from the outside walls, regardless of firewalls).*

2. *Major alterations are reasonably considered major in scope or expenditure, when the total cost of the work over a 5 year period, excluding costs relating to sprinkler installation, is equal to or greater than **33% of the assessed value of the building**, as of the date of permit application.*

Major alterations would include work such as the demolition or reconstruction of existing ceilings, sub flooring, walls, stairways, doors, or the removal or relocation of a significant portion of the building's HVAC, plumbing, or electrical systems. Cosmetic work such as painting or installing / replacing carpeting would be considered minor and would not trigger compliance with this law.

9. Energy Code Provisions for Existing Buildings

The buildings are subject to the International Energy Conservation Code (IECC) including the amendments contained in 780 CMR Chapter 13. Level 2 and 3 alterations to existing buildings are permitted without requiring the entire building to comply with the energy requirements of the International Energy Conservation Code (IECC). The alterations (new elements) shall conform to the energy requirements of the IECC as they relate to new construction only (IEBC 711.1 & 808.1).

10. Ventilation Requirements

All reconfigured spaces must provide existing mechanical ventilation not less than 5cfm of outdoor air per person and not less than 15 cfm of ventilation air per person, or natural ventilation as required by the International Mechanical Code (i.e. exterior openings equal to 4% of floor area) (IEBC Section 709).

11. Structural Provisions for Existing Buildings

Structural alterations to existing buildings must be evaluated by a registered structural engineer to determine compliance with the IEBC.

12. Accessibility for Persons with Disabilities

Massachusetts Architectural Access Board Regulations

Alterations to the building must comply with the requirements of the Massachusetts Architectural Access Board Regulations (521 CMR). For existing building alterations the requirements of 521 CMR are based on the cost of the proposed work:

A. If the cost of the proposed work is **less than $100,000,** only the new work must comply.

B. If the cost of the proposed work is **greater than $100,000** then all new work must comply and the existing building must include an accessible public entrance, toilet room, telephone and drinking fountain (if public phones and drinking fountains are provided) (521 CMR Section 3.3.1(b)). Exempt work when calculating the cost of work includes roof repair or replacement, window repair or replacement, and repointing and masonry repair work unless the exempt work exceeds $500,000.

C. If the cost of the proposed work is **greater than 30% of the full and fair cash value** of the existing building, the entire building is required to comply with 521 CMR (521 CMR Section 3.3.2). There is no exempt work, i.e. the entire project costs apply to determining the 30% criteria.

The cost of all work performed on a building in any 36 month period must be added together in determining the applicability of 521 CMR (521 CMR Section 3.5). The full and fair cash value of the existing building is determined by using the 100% equalized assessed value of the building on record with the city assessor's office. The following table summarizes the assessed value of each building and the 30% trigger. Note that the Field House and the Lord Building are considered a single building per the City of Lowell assessor's database:

Building	Assessed Value (Building Only)	30% Threshold
Field House & Lord Building	$23,345,900	$7,003,770
Kouloheras Building	$26,830,600	$8,049,180
Freshman Academy	$8,272,300	$2,481,690
Steam Plant	$214,400	$64,320

If the renovation triggers the 30% threshold in any individual building, all portions of the building open to the general public of that building (students, visitors, etc) must be upgraded to comply in full with the current requirements of 521 CMR. Any employee-only areas such as staff lounges, staff bathrooms, and staff work areas are not required to comply with 521 CMR, as long as student and public access is not permitted. It should be noted that the Access Board expects to extend their jurisdiction to employee areas. Major upgrades required to meet full compliance with the provisions of 521 CMR will likely include the following building features (note a full comprehensive accessibility survey was not conducted, but should be conducted if 30% trigger is reached in any building):

- All public entrances must be accessible (521 CMR 25.1)

  It is our understanding due to security reasons, the only entrances used are the main entrance located between the Field House and Lord Building and the entrance into the Kouloheras Building used for access to the auditorium, both located along Father Morissette Boulevard. All other exterior doors are exit-only. The two main entrances appear generally accessible. However the ramp provided at the entrance into the Kouloheras Building is not provided with compliant handrails. The handrail is not provided with a high and a low rail as required by 521 CMR 24.5.

Kouloheras Aud. Entrance

  The main entrance into the Freshman Academy Building is not accessible since there is a step-up at the exterior door. There is an accessible entrance along the side of the building, however if full compliance is triggered all entrances are required to be made accessible.

Freshman Academy Main Entrance

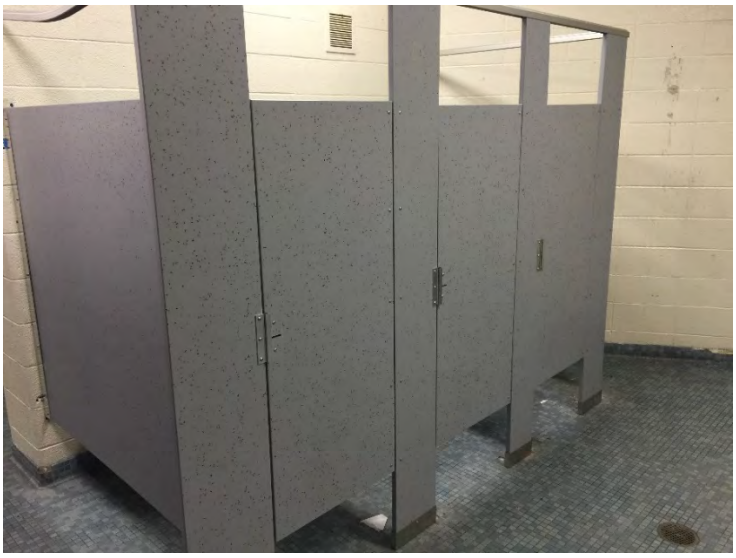
- Accessible routes throughout the building (521 CMR 20.1)

  Most areas of the buildings were generally accessible and along an accessible route via elevators. The existing elevator sizes appeared to meet the minimum threshold (4' x 4'), however the controls would need to be updated to comply with MAAB (Braille, height, etc.). Note that a stretcher-sized elevator is not required in existing buildings regardless of the level of renovation (524 CMR). The auditorium in the Freshman Academy Building had a raised platform with no accessible route.

Freshman Academy Stage

- Accessible toilet rooms (521 CMR 30)

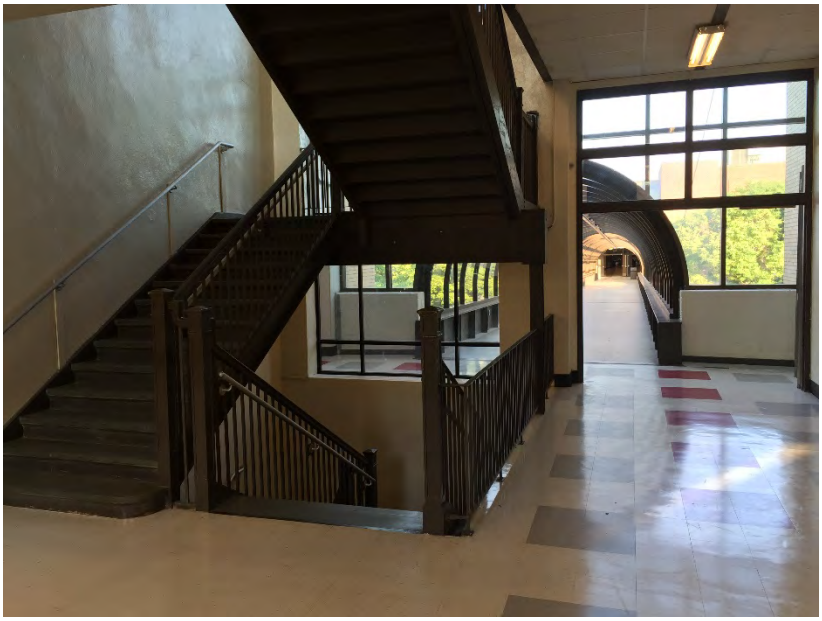
  Some of the existing restrooms are not accessible due to dimensional and clear space issues. The bathrooms observed in the Kouloheras and Lord Buildings appeared to be generally accessible but would need some slight modifications to meet the MAAB. The bathrooms and showers in the Field House were not accessible. The Freshman Academy was provided with a set of toilet rooms on the first level that appeared to be accessible however the other bathrooms located throughout the building appeared to be inaccessible. If the 30% threshold is triggered all toilet rooms must be brought into compliance with the MAAB.



Example Non-Compliant Toilet Stalls

- Accessible Handrails & Stair Nosings (521 CMR 27.4)

  Some handrails throughout the buildings were not compliant with the MAAB due to improper extensions at the top and bottom or handrails were only provided on one side of the stair. Stairs must be provided with handrails on each side and must extend at least 12 inches beyond the top riser and parallel with the floor. At the bottom, handrails must extend at least 12 inches plus the width of one tread beyond the bottom riser. The handrail shall continue to slope for a distance of the width of one tread from the bottom riser; the remainder of the extension shall be horizontal. The ramp located in the basement of the Kouloheras Building is not provided with handrails. The majority of stairs throughout the Kouloheras and Lord Buildings were provided with a compliant handrail on one side, however the handrail on the other side were typically not compliant with the extension requirements. The central stair in the Field House is only provided with a handrail on one side. Some stairs also included abrupt nosings that would have to be altered to comply.



Example Stair Handrails

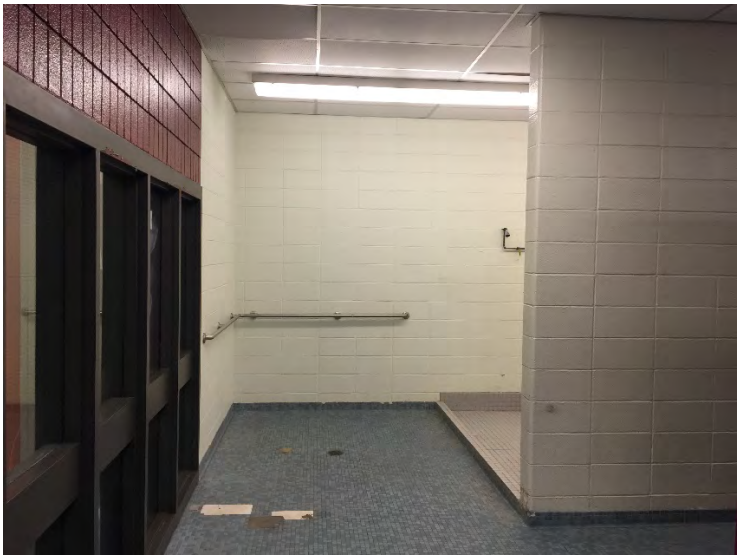
- Accessible Wheelchair Seating (521 CMR 14.4)

  Designated wheelchair spaces are required to be provided based on the total number of seats in the assembly space. The auditorium in the Kouloheras Building was not provided with wheelchair spaces on the balcony level and they were not clearly designated on the main level. Additionally there were not integrated wheelchair seating into the bleachers in the gym or pool in the Field House.

Auditorium Balcony Seating

- Accessible Locker Rooms (521 CMR 19)

  The locker rooms in the Field House were generally not accessible. The showers were not accessible due to a curb prohibiting wheelchairs from entering the shower areas.



Example Curb At Showers

- Accessible Door Hardware (521 CMR 26.11)

  In the Kouloheras Building is was observed that some doors are provided with knobs for opening devices. Doors must have operating devices that have a shape that is easy to operate with one hand and that does not require tight grasping (521 CMR 26.11.1). Lever operated mechanisms are required.

Example Door Hardware

- Accessible Lab Benches (521 CMR 12.4)

  The science classrooms in the Kouloheras Building were not provided with accessible lab benches. At least 5% of each type of sink, counter or other work areas in classrooms and labs must be made accessible.

Example Lab Bench

Americans with Disabilities Act Guidelines

The ADA Guidelines are not enforced by the Commonwealth of Massachusetts, they can only be enforced through a civil lawsuit or complaint filed with the U.S. Department of Justice. Compliance with the ADA Guidelines is triggered by renovations to an existing building. All renovations to the building must be made to ensure that, to the maximum extent feasible, the altered portions of the facility are readily accessible to and usable by individuals with disabilities (28 CFR Part 36 Section 36.402(a)). Alterations made to provide an accessible path of travel to altered areas and accessible facilities (i.e. provide accessible toilet facilities) are not required if the cost exceeds 20% of the total cost of the alteration (28 CFR Part 36 Section 36.403(f)). However, if the cost to meet these accessibility requirements does exceed 20%, alterations are still required to the maximum extent that the area can be made accessible without exceeding the 20% criteria (28 CFR Part 36 Section 36.403(g)). The ADA also contains less stringent dimensional requirements for some building elements in an existing building where it is infeasible to meet the requirements for new construction (ADA Section 4.1.6).

13. Minimum Number of Toilet Room Fixtures

248 CMR: The Massachusetts State Plumbing Code

The Massachusetts Plumbing Code (248 CMR) regulates the number of plumbing fixtures required throughout buildings. The minimum number of plumbing fixtures is established by 248 CMR 10.10(18) Table 1 based on the building use and the expected population as determined by the local Plumbing Inspector per 248 CMR 10.10 (18)(2).

The Plumbing Inspector must approve the building population, however, the building population can generally be based on the designer's determination of the actual number of people expected within the building. The Plumbing Code expects that the building population will be divided evenly between male and female for the purpose of determining fixture counts. Any distribution other than 50/50 must be justified to the Plumbing Inspector.

If the existing number of toilet room fixtures are altered (i.e. to make existing toilet rooms accessible) the number provided is subject to the minimum requirements of 248 CMR. The following analysis was completed using the maximum expected population of the buildings provided by the architect.

Kouloheras & Lord Buildings

Classification		Water Closets		Male Urinals [A]	Lavatories (each sex)	Drinking Fountains	Service Sink
		Female	Male				
Staff	170 Females 170 Males	1 per 20	1 per 25	33%	1 per 40	N/R	1 per Floor
	Required fixtures	8.5	6.8		4.25	0	
	Total Required Fixtures	9	5	2	5	0	
Students	1,320 Females 1,320 Males	1 per 30	1 per 90	1 per 90	1 per 90	1 per 75	1 Per Floor
	Required fixtures	44	14.67	14.67	14.67	35.2	
	Total Required Fixtures	44	15	15	15	36	

[A] Urinals may be substituted for toilets up to the percentage shown of the required number.

Freshman Academy

Classification		Water Closets		Male Urinals [A]	Lavatories (each sex)	Drinking Fountains	Service Sink
		Female	Male				
Staff	56 Females 56 Males	1 per 20	1 per 25	33%	1 per 40	N/R	1 per Floor
	Required fixtures	2.8	2.24		1.4	0	
	Total Required Fixtures	3	2	1	2	0	
Students	440 Females 440 Males	1 per 30	1 per 90	1 per 90	1 per 90	1 per 75	1 Per Floor
	Required fixtures	14.67	4.89	4.89	4.89	11.73	
	Total Required Fixtures	15	5	5	5	12	

[A] Urinals may be substituted for toilets up to the percentage shown of the required number.

Lowell High School Existing Conditions Evaluation / Base Repair Electrical Report
Lowell, MA
Project No. 67150.00
L#53797/Page 1/October 21, 2016

Introduction:

In general, the electrical systems have reached their life expectancy and are in poor condition. Life safety lighting and exit signs are fed from generators, with the exception to the Freshman Academy Building, and are not compliant with today's codes.

The fire alarm system is in fair condition but will require replacement due to voice evacuation requirements of present code.

Lighting systems in general have been upgraded with lamps and ballasts to conserve energy. T8 lamps have been installed in most spaces. Light fixtures, however, are in poor/fair condition in the majority of the building.

The power for the facility is in poor condition, a new power distribution system should be provided. Multiple services will be required.

The communications system wiring infrastructure for tel/data has been upgraded to accommodate desired use but is not up to present standards. A classroom intercom/paging system is not up to present standards. The central clock system is not operational. There is a dedicated headend room and remote IDF closets with a fiber optic back bone that is in fair condition.

Kouloheras (1892, 1922 & 1997 Addition) Building:

Electrical Service:

The Kouloheras Building service equipment was installed in the 1990s and is in fair condition. The switchboard prior to the 1990s, is back-fed through a 500 kVA dry type transformer. The second switchboard is manufactured by FPE and is in need of replacement. The second switchboard is rated at 1,600 amps, 120/208 volt, 3 phase.

Kouloheras Building Service

Distribution System:

There are a mixture of panels and feeders from various dates in all sections of the buildings. The panelboards prior to the 1990s renovations are in poor condition. All panels located in the corridors should be relocated to dedicated electric rooms. Panels are not separated by load type. Panels for computer equipment have been added over time.

Typical Pre-1990's Panelboard

Typical Corridor Panelboard w/ Padlock

Branch Circuits:

The branch circuits appear to be in fair condition throughout the building. The School has had upgrades for computer labs and also individual classrooms however, extension cords are being used which indicates lack of receptacles. The wiring includes conduit, wiremold, and armored cable. The code issue presently is that neutral conductors appear to be shared. Present code requires multi-wire branch circuits to have common trip.

Interior Lighting:

The interior lighting throughout generally has T8 fluorescent lamps and electronic ballasts. The school has gone through an energy conservation program in which lamps and ballasts have been replaced. The general assessment of the fixtures is that they are in fair condition. Pendant lighting fixtures are present in classrooms and Kouloheras Building.

Classroom Pendant Lighting

Exterior Lighting System:

The site lighting is generally from the street. There are building mounted fixtures at exit discharge. There is no onsite parking.

Emergency Power:

The Kouloheras Building is served by the generator at the power plant. There is an Olympian transfer switch present in the emergency electric room. The transfer switch feeds emergency and optional standby loads. There is only one switch present. The equipment not being used should be removed.

Kouloheras Building

Life Safety (Lighting & Fire Alarm):

The building is served by an emergency generator for emergency lighting and exit signs. The system appears to have limited capacity to serve loads other than life safety. The lighting is normal/emergency configuration in which light fixtures are used for the same purpose (it is code compliant). Exit signs appear to be adequate and well maintained.

The Building has been updated with Simplex 4120 addressable fire alarm panels. The system has ADA horn/strobes in some classrooms but not all locations.

Simplex Addressable Fire Alarm Panel

Security System:

Refer to TSG Solutions report.

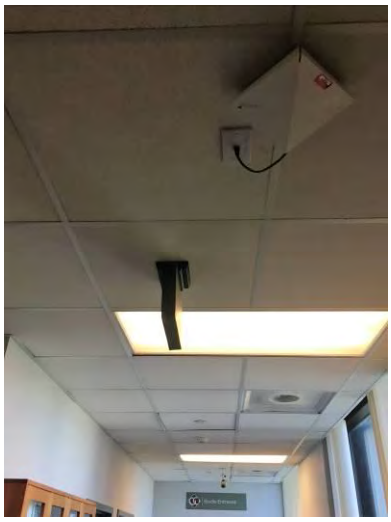
Communication/Clock System:

The clock speaker systems should be updated. There is a mixture of battery clocks and system clocks. Classrooms have analog handsets for communications with administration. Paging system: Refer to TSG Solutions report.

Typical Clock/Speakers

Data Systems:

The data cabling has been updated at several stages. The system appears to have been updated to serve various needs. There are IDF closets throughout the facility, as well as, cable tray in the corridors. There is also wireless access being added throughout the school. A/V wiring and interactive white boards are present in selective classrooms. Some classrooms have been equipped with a display post with 3 monitors at 120 degrees apart.



Wireless Access Point

Typical Work Station

Lord/Fieldhouse 1980 Building:

Electrical Service:

The Lord Building and Field House are served by a 3,000 amp, 277/480 volt, 3 phase Switchboard located in the receiving area main electric room. The equipment is manufactured by FPE and is in poor condition. A second switchboard has been tapped off the main bus due to space limitations. The second switchboard is in fair condition. The original switchboard needs replacement.

Lord Bldg. & Field House Service

Distribution System:

There are a mixture of panels and feeders from various dates in all sections of the buildings. The panelboards prior to the 1990s renovations are in poor condition. All panels located in the corridors should be relocated to dedicated electric rooms. Panels are not separated by load type. Panels for computer equipment have been added over time.

Typical Panelboard

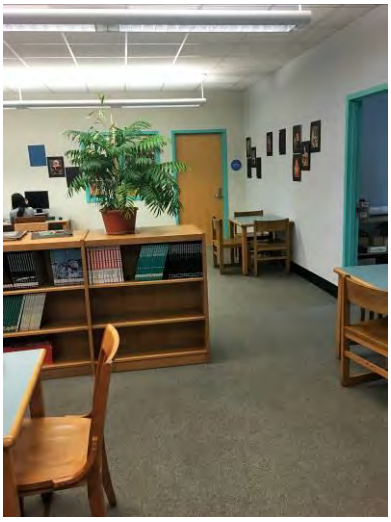
Branch Circuits:

The branch circuits appear to be in fair condition throughout the Lord Building and Field House Building. The School has had upgrades for computer labs and also individual classrooms however, extension cords are being used which indicates lack of receptacles. The wiring includes conduit, wiremold, and armored cable. The code issue presently is that neutral conductors appear to be shared. Present code requires multi-wire branch circuits to have common trip.

Typical Multi-Wire Branch Circuit

Interior Lighting:

The interior lighting throughout generally has T8 fluorescent lamps and electronic ballasts. The school has gone through an energy conservation program in which lamps and ballasts have been replaced. The general assessment of the fixtures is that they are in fair condition. Pendant lighting fixtures are present in classrooms.



Library Pendant Fixtures

Exterior Lighting System:

The site lighting is generally from the street. There are building mounted fixtures at exit discharge. There is no onsite parking.

Emergency Power:

The Lord Building and Field House are served by a 100 kW generator located adjacent to 750 KVA transformer. The generator serves emergency lighting throughout and walking kitchen refrigeration transformers. There is no separation between the generator and transformer. The automatic transfer switch is located in the main electric room.

Lord Building

Life Safety (Lighting & Fire Alarm):

The Lord Building and Field House are served by an emergency generator for emergency lighting and exit signs. The system appears to have limited capacity to serve loads other than life safety. The lighting is normal/emergency configuration in which light fixtures are used for the same purpose (it is code compliant). Exit signs appear to be adequate and well maintained.

The Buildings have been updated with Simplex 4120 addressable fire alarm panels. The system has ADA horn/strobes in some classrooms but not all locations. There is a local master box present near the main entrance on receiving side.

Simplex 4120 Fire Alarm Panel

Security System:

Refer to TSG Solutions report.

Communication/Clock System:

The clock speaker systems should be updated. There is a mixture of battery clocks and system clocks. Classrooms have analog handsets for communications with administration. Paging system: Refer to TSG Solutions report.

Typical Clock

Data Systems:

The data cabling has been updated at several stages. The system appears to have been updated to serve various needs. There are IDF closets throughout the facility, as well as, cable tray in the corridors. The only IDF that appeared to be in need of replacement is at the Field House. There are IDF closets throughout the facility, as well as, cable tray in the corridors. There is also wireless access being added throughout the school. A/V wiring and interactive white boards are present in selective classrooms. Some classrooms have been equipped with a display post with 3 monitors at 120 degrees apart.

Typcial Data Wiring

Steam Plant:

Electrical Service:

The Steam Plant main service consists of two switches and meters. The services are rated at 1,000 amp, 277/480 volt, 3 phase and 2,500 amp, 277/480 volt, 3 phase. The service equipment is in good condition.

Steam Plant Service

Distribution System:

The panelboards are in fair condition.

Motor Control Center

Branch Circuits:

The branch circuits appear to be in fair condition throughout the Steam Plant. The wiring includes conduit and armored cable.

Interior Lighting:

The interior lighting generally has T8 industrial fluorescent lamps and electronic ballasts. The school has gone through an energy conservation program in which lamps and ballasts have been replaced. The general assessment of the fixtures is that they are in fair condition.

Exterior Lighting System:

The site lighting is generally from the street. There are building mounted fixtures at exit discharge. There is no onsite parking.

Emergency Power:

The Steam Plant has a 105 kW natural gas emergency generator. The generator is in good condition. There are emergency battery units throughout as well, which are in poor condition.

Steam Plant Generator

Life Safety (Lighting & Fire Alarm):

A Mircom fire alarm panel is located in the Steam Plant with a rav key stuck trouble. Exit signs appear to be adequate and well maintained. The FireLite panel is in good condition but is in trouble condition.

Fire Alarm Panel

Security System:

Refer to TSG Solutions report.

Communication/Clock System:

The clock speaker systems should be updated. There is a mixture of battery clocks and system clocks. Paging system: Refer to TSG Solutions report.

Freshman Academy Building:

Electrical Service:

In the Freshman Academy Building, the main service is rated at 1,200 amp, 277/480 volt, 3 phase which feeds a 300 kVA dry type transformer with a 1,000 amp, 120/208 volt, 3 phase distribution panel. The equipment is in poor condition. There is a 400 amp fire pump breaker in the main switchgear.

Freshman Academy Service

Fire Pump Controller

Distribution System:

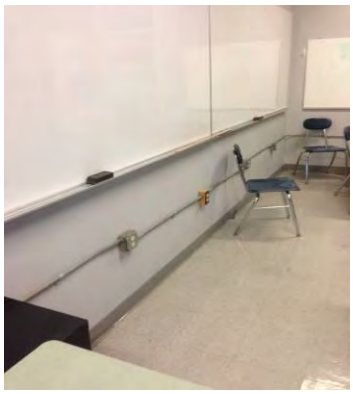
There is a mixture of panels and feeders from various dates in all sections of the buildings. The panelboards prior to the 1990s renovations are in poor condition. All panels located in the corridors should be relocated to dedicated electric rooms. Panels are not separated by load type. Panels for computer equipment have been added over time.

Typical Pre-1990's Panelboard

Typical Corridor Panelboard w/ Padlock

Branch Circuits:

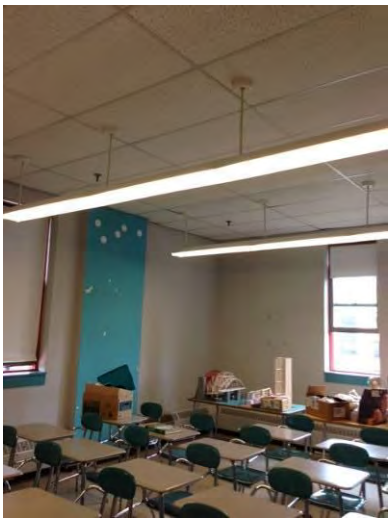
The branch circuits appear to be in fair condition. The School has had upgrades for computer labs and also individual classrooms however, extension cords are being used which indicates lack of receptacles. The wiring includes conduit, wiremold, and armored cable. The code issue presently is that neutral conductors appear to be shared. Present code requires multi-wire branch circuits to have common trip. The Freshman Academy Building has outlets near sinks which are not GFCI protected.



Surface Conduit Branch Circuit

Interior Lighting:

The interior lighting throughout generally has T8 fluorescent lamps and electronic ballasts. The school has gone through an energy conservation program in which lamps and ballasts have been replaced. The general assessment of the fixtures is that they are in fair condition. The Freshman Academy has a number of broken fixtures that need replacement.



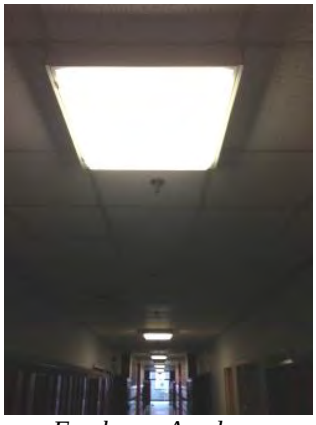
Classroom Pendant Lighting

Exterior Lighting System:

The site lighting is generally from the street. There are building mounted fixtures at exit discharge. There is no onsite parking.

Emergency Power:

The Freshman Academy does not have an emergency generator. All emergency lighting is done through Bodine ballasts and battery units.



Freshman Academy

Life Safety (Lighting & Fire Alarm):

The building is served by an emergency generator for emergency lighting and exit signs. The system appears to have limited capacity to serve loads other than life safety. The lighting is normal/emergency configuration in which light fixtures are used for the same purpose (it is code compliant). Exit signs appear to be adequate and well maintained.

The coverage of devices appears to be adequate except for the pool area. There are no sprinklers or automatic detection in the pool area. The system has ADA horn/strobes in some classrooms but not all locations. The Freshman Academy Building fire alarm system is in poor condition and needs complete replacement of the Zans 400 conventional panel. Fire pump controller is not on a generator.

Fire Alarm Control Panel

Security System:

Refer to TSG Solutions report.

Communication/Clock System:

The clock speaker systems\ should be updated. There is a mixture of battery clocks and system clocks. Classrooms have analog handsets for communications with administration. Paging system: Refer to TSG Solutions report.

Typical Clock/Speakers

Data Systems:

The data cabling has been updated at several stages. The system appears to have been updated to serve various needs. There are IDF closets throughout the facility, as well as, cable tray in the corridors. There are IDF closets throughout the facility, as well as, cable tray in the corridors. There is also wireless access being added throughout the school. A/V wiring and interactive white boards are present in selective classrooms. Some classrooms have been equipped with a display post with 3 monitors at 120 degrees apart.

Typcial IDF Room

Recommendations:

- The Kouloheras Building service is only at 50% life, however, the second switchboard used for distribution at 120/208 volt, 3 phase needs replacement. The Lord Building and Field House services should be updated from a pad mounted transformer to new switchgear. Equipment installed in the 1990s can be back-fed. The Freshman Academy Building electrical service equipment is in poor condition and should be replaced. The Steam Plant service is only at 50% life including distribution equipment.

- All FPE panelboards and feeders should be replaced as they appear to be the oldest vintage.

- We recommend separating neutral conductors for branch circuits and adding breaker ties for multi-wire branch circuits. Replace GFCI outlets within 6ft. of sinks in classrooms.

- The interior lighting fixtures are in fair condition. Replacement of fixtures should be done as areas are reconfigured or renovated. Also, we recommend installing LED fixtures on exterior of building perimeter for energy savings.

- In the Kouloheras Building, the 115 kW generator is no longer in service and should be removed. The emergency distribution system should be separated between life safety and optional standby. The existing transfer switch and non-life safety feeders can remain. New 2-hour rated closets and feeders should be installed to serve life safety loads only. The Lord Building and Field House generator should be separated from the transformer by 20 feet or a concrete masonry wall should be installed. Due to the size of the building, the generator appears small and does not have the capacity to add the heating system in the event of an outage. The emergency system needs to be installed in dedicated 2-hour rated rooms. An emergency generator should be provided for the Freshman Academy Building. The Steam Plant emergency battery units should be upgraded.

- A test of the life safety lighting system is recommended at night-time for coverage. During the walkthrough, the coverage did appear adequate.

- The Simplex panel 4120 is obsolete and should be replaced by a 4100ES. The system appears to have been updated in the 1990s and has reached its life expectancy. The life expectancy of a fire alarm system is 20 years.

- The security system for all buildings should be updated to include an integration of Intrusion CCTV and Access Control. Refer to TSG Solutions report for additional Security system information.

- A new wireless clock and VOIP system should be installed to replace the present system.

- The data system should be updated as a continuing operations program. It appears that it is presently in a continuous updating stage. Continue upgrading wireless access for sufficient data access.

Crabtree McGrath Associates, Inc.

LOWELL HIGH SCHOOL EXISTING CONDITIONS EVALUATION

PERKINS EASTMAN PROJECT # 67150.00
FOODSERVICE EQUIPMENT ASSESSMENT

KOULOHERAS BUILDING – CULINARY ARTS KITCHEN AND CAFE

The Lowell High School Culinary Arts kitchen, known as the Hospitality Academy, is a typical program offering two tracks of Culinary Arts instruction. There is a baking program and an Ala-Carte program with both programs supporting the Daniel P. Kane Courtyard Café. The café serves a daily breakfast bar that is offered to the teaching staff and the general public. Additionally, the program offers lunch three days per week, hosting the general public and various local groups. The culinary arts program is located on the lower level of the Kouloheras Building is difficult for the public to accessed without going through the school. As a result, many groups inquire about having the program host events, but some must seek other venues due to a lack of direct street access. In speaking to the Culinary Arts director, this does happen with some regularity. It is clear that with a street presence and improved access, the local community will better utilize this program and it would provide a richer educational program for the students.

Programmatically, the culinary arts system is set and on a solid footing; however, the physical facilities present tremendous challenges to the program, with countless safety concerns, and the lack of space needed to effectively bring it to the next level. Below are highlights of the challenges we observed.

KITCHEN FINISHES –CULINARY ARTS

The kitchen finishes are original to the school construction in many cases. In other cases some finished seem to go back to a least 1985. In any even, there I no clear separation between the baking and ala-carte teaching programs.

Specific Issues	***Recommendations***
The floor within the kitchen is a painted concrete. In many cases the paint is chipping. The floor is uneven and pitted. The junctions where the floors meet the walls are missing the required coving needed to assist in keeping the floor clean (image 1).	We recommend replacing the floor with a more durable quarry tile floor with an integral coved base. *Base repair requirement.*
The walls leave much to be desired. They are comprised of a painted block, which is adequate, but because this space was not originally designed to be a commercial kitchen, piping and electrical conduits are exposed and surface mounted to the walls (image2).	All piping and conduit must be concealed in walls. Walls must be free of obstructions and be smooth, easily cleanable, and durable. *Base repair requirement.*

161 West Main Street, Georgetown, Massachusetts 01833 phone: 978.352.8500 mail@crabtree-mcgrath.com

The health code mandates that ceiling material be a smooth, non-porous, and easily cleaned surface. The current ceiling is choked with piping and conduit. (image3).	Conceal piping and conduit above a drop ceiling of code compliant material. *Base Repair requirement.*

Image 1

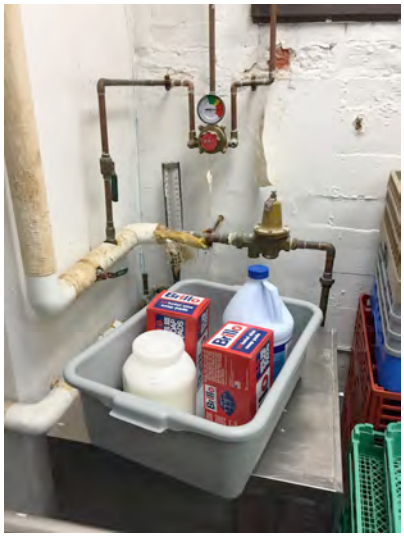


Image 2

Image 3

EQUIPMENT NEEDS – CULINARY ARTS

The Culinary Arts Director indicated that the kitchen is too small and not well equipped. We agree, and feel that the current conditions can be unsafe, difficult to manage, and not appropriate in the long term. There is no clear separation between Baking and Ala Carte cooking. The two programs are forced to use the single food preparation sink within the facility. This is problematic in that one group may be dealing with raw meats and poultry at the sink, and the baking group comes along to utilize the sink for baking needs that may or may not be cooked, resulting in cross contamination. The teaching staff is managing this risk well, but with a clear distinction between both programs and adequate equipment, the staff can devote more focus to teaching and less to managing sanitation.

SPECIFIC ISSUES	***RECOMMENDATIONS***
The steam kettles and oven that are present do not have a hood above them to exhaust the cooking fumes. Additionally, they are located in the baking side of the kitchen (Image 4)	With more space, each program can be better equipped, and properly protected with fire suppression systems and exhaust hoods. *Base Repair requirement.*
The range is rather large and unsafe. In Image 5 the students are learning to prepare stock. This should be done in stationary floor mounted kettles. The facility would benefit from additional ovens rather than the present range top. (Image 5).	Replace the six-burner range with multiple rages to facilitate smaller groups. Provide floor-mounted kettle for stock and sauces. Provide additional ovens and update the balance of the cooking equipment.

The single deck of oven capacity is insufficient to support the current population.	
The walk-in refrigerator and freezer are undersized for the current needs. They are also remotely located many hundreds of feet away from the kitchen. Having this storage is better than nothing but inconvenient. (Image 7 to 9). Note the floor and ceiling finishes.	Replace the existing units with larger units and locate them within the teaching kitchen. Two sets of coolers and freezers are required. One for baking and one for ala carte cooking.
Overall the equipment is out of date and in need of replacement (image 6). There have been a few investments in equipment. The convection oven, kettles, dishwasher, and miscellaneous small equipment have been added.	These recent equipment investments are great and of good quality. The assumption is that they can be transferred should a new facility be built; however, exhaust hoods, worktables, and sinks will be needed to supplement what is transferred.

LORD/FIELD HOUSE BUILDINGS – HIGH SCHOOL KITCHEN AND SERVERY

The Lowell High School Kitchen and Servery prepares approximately 2,000 meals per day for the high school and Freshman Academy. In addition, it prepares 500 dinner portions and another 600 meals that are shipped to various lower schools within the city. This kitchen serves as the central hub of receiving, production, and distribution. Adding to the complexity, the program prepares many meals from scratch, meaning food is prepared on site with care, avoiding when possible frozen and highly processed ingredients. It is very much a source of pride to the staff to be able to prepare healthy nutritious meals.

The high school servery is remotely located from the kitchen. Logistically, this is not desirable and diminishes available labor hours for production by relegating it to distribution. Any future renovation must address this issue and have the servery directly adjacent to the production floor. The servery was recently renovated to give it a refreshed appearance and to better display the food and create more serving points. The servery refresh also took aim at being able to move students through the facility efficiently. The renovation was effective, but it could only go so far. The renovation was limited in scope so it could not address queuing, and certain travel paths still conflict with one another.

Lastly, the kitchen also prepares and ships meals to the Freshman Academy, which is remotely located. We will address the freshman academy later on in this report.

KITCHEN FINISHES - LORD/FIELD HOUSE

The kitchen finishes are original to the school construction. As the kitchen program and foodservice needs have changed, the finishes and equipment within those spaces have not; resulting in instances where the finishes and placement of equipment are not appropriate to the function of the space. Below are specific observations and recommendations.

SPECIFIC ISSUES	***RECOMMENDATIONS***
A walk-in cooler was added to what was once a break room. As a result, the finishes are not appropriate for the function (image 10).	New coolers and freezer of sufficient size are needed. *Base repair requirement.*
The added walk-in cooler is not sealed to the finished ceiling above. The compressor for the added cooler is located indoors above the box. Its placement was convenient but not appropriate (image 11).	Sealing off horizontal surfaces prevents dust accumulation. Locating the compressor outdoors allows heat and noise to be removed from the kitchen environment. *Base repair requirement.*
The rear door to the kitchen must have a screen or some type of air door to prevent flying insects form entering the kitchen (image 12).	The addition of an air door or screen is needed. *Base repair requirement.*
The dry goods storage finishes are worn. Missing floor tiles and damaged celling tiles do not meet the criteria for sanitation (image 13). The floor	Quarry tile flooring and a new ceiling will provide a more durable surfaces and better sanitation. *Base repair requirement.*

tiles are missing in various locations due to heavy pallet truck traffic (image 14).	
The storage equipment is in need of replenishment. Mobile carts should be used to transport goods (image 15).	Dunnage platforms are needed for bulk storage along walls. Wood pallets storage is fine in the short term only. The need for additional carts is evident.

Image 10

Image 11

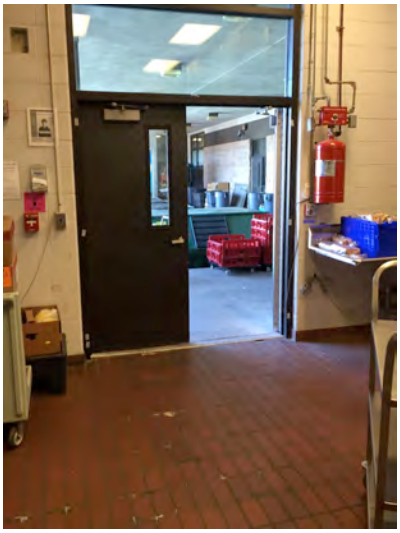

Image 12

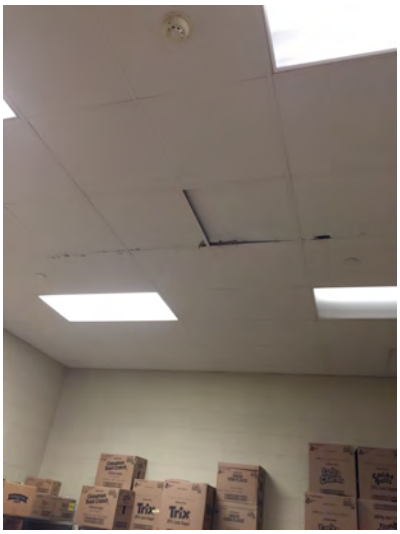

Image 13

Image 14

Image 15

Other finishes associated with equipment have also suffered from many years of hard use. For example, the original walk-in cooler and freezer are showing signs of failure. In addition, they are undersized given the growth of the program.

SPECIFIC ISSUES	***RECOMMENDATIONS***
The original walk–in freezer floor is a very slippery diamond pattern metal floor (image 16). The metal floor system weakens over time. As the gaskets between the panels age, moisture works its way into the insulation reducing the effectives of the insulation and corroding the floor.	Modern floor systems carry the quarry tile finish into the refrigerated rooms. This provides for better slip resistance and sanitation as the floor system will be monolithic and seal moisture from working its way into the insulated floor panels.
The freezer floor is failing. In fact, the frozen temperature is likely the only way it has maintained its integrity. Moisture that had worked into the panels can be seen heaving out to the gaps in the floor (image 17).	This can only be resolved with a new unit or costly floor replacement.
The piping covers serving the cooking equipment has failed (image 18). All the piping is exposed making proper cleaning of this area impossible. The insulation on the piping is absorbent of liquids and is not considered a cleanable surface.	In a modern installation these pipes will be enclosed within a stainless steel chase assembly. Proper cleaning and future equipment changes are made easier by utilizing a stainless steel enclosure system to convey utilities.

Image 16

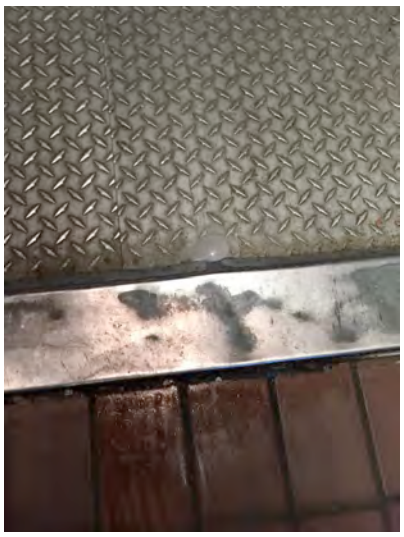

Image 17

Image 18

EQUIPMENT NEEDS - LORD/FIELD HOUSE

The kitchen facility has grown since the original construction. As a result, equipment has been added were possible and not necessarily where it will be most effective. Large rotary ovens were added to the program due to the volume of cooking that takes place. As described by the foodservice director, the rotary oven is the backbone of the operation. When the unit goes down and is in need of repair, the program is left severely under capacity. The future equipment compliment must consider redundancy with key pieces of equipment.

SPECIFIC ISSUES	***RECOMMENDATIONS***
The need for preparation work surface is evident. There is an abundance of sinks but not enough flat working surfaces. The staff has taken to covering the sinks with a vinyl work boards to rectify this need. (Image 19).	Work sinks and tables must be redesigned to better serve a modern foodservice program. The current assembly is not ergonomically correct.
Simple things like transport carts will dramatically improve efficiency. The staff has taken to using whatever is an available to transport items to the remote serving areas (image 20).	The TV cart is a clever solution but a stainless steel cart that is easily cleaned and equipped with suitable food grade finish is needed.
The rotary oven seen here is the backbone of the operation (image 21). The unit works well but does need to be greased and repaired on occasion. The entire right side of the unit has had the side panel removed. Gears and sprockets are visible.	Multiple rotating rack ovens with smaller footprints are needed. Multiple units provided for redundancy and flexibility by being able to cook at varying temperatures.

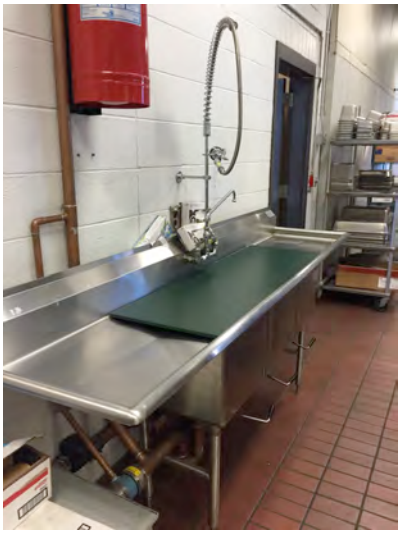

Image 19

Image 20

Image 21

Overall we feel the footprint area of the kitchen is sufficient; but organizationally, improvements are needed. There is not doubt a future renovation is needed. The kitchen redesign will need to reflect how the operation currently operates and offer future flexibility. The trend in foodservice is to move away from frozen highly processed foods in place of more flavorful nutritious and healthier foods. To some extent this has already taken effect, but much of the equipment and the flow through of the production floor has not been updated.

FRESHMAN ACADEMY BUILDING – SERVING AREA

The Freshman Academy is composed of only one serving line and two small storage rooms. This venue does not have the capability to prepare meals of any kind or to cook and reheat food. It relies on the High School kitchen for all meal preparation.

The facility serves approximately 520 meals per day in four lunch waves. The location of the serving line is within what was once a storage closet attached to a large gymnasium type space. As a result, all that can fit is a single serving line. A facility serving 520 meals per day should have at minimum two serving lines. Due to the lack of space, a significant portion of the serving line has spilled out into the seating area.

We observed the serving line during mealtime and noticed that the students were waiting in a line that wrapped around three quarters of the seating area. This is problematic, as the extended serving time observed resulted in the last students only having a few minutes to eat and rest.

SPECIFIC ISSUES	***RECOMMENDATIONS***
The storage associated with the servery is inadequate. The wall, floor and ceiling finishes are not code compliant (image 22).	Walls must be sealed; floor should be durable and easy to clean with coving at the walls. The ceiling should be a lay in washable tile concealing the structure above.
The storage equipment within the storage room is made of standard metal shelving. This material is not code compliant (image 23)	Proper NSF approved shelving in needed.
Another small storage area seen in image 24 is located in what was once a mop closet. Note the wood shelving.	A proper storage room with proper equipment is needed. There should also be a mop closet available for cleaning. NSF approved and code complaint shelving in required.

Image 22

Image 23

Image 24

The Freshman Academy servery is compressed into one serving line. This causes all students to queue into one line regardless of what selection they intend to make.

SPECIFIC ISSUES	***RECOMMENDATIONS***
The serving line spills out into the seating area. There is not enough space in either storage room or the serving room to secure these items when not in use (image 25).	Adequate area to house two separate serving lines is required.
The prep sink seen in Image 26 is now used as a hand sink. The health code requires both a hand washing sink and a food preparation sink in this configuration.	The proper compliment of sinks is required to promote adequate sanitation practices.

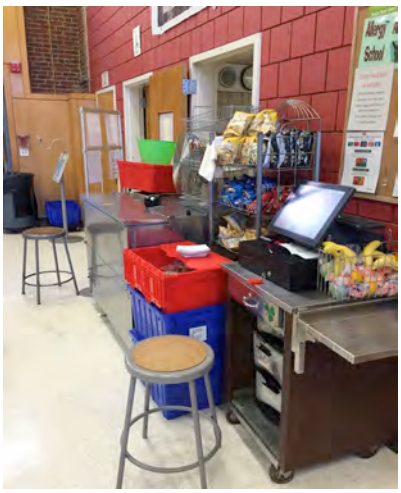

Image 25

Image 26

CONCLUSION

KOULOHERAS BUILDING – CULINARY ARTS KITCHEN AND CAFE

The culinary program will benefit from additional kitchen space. That space must be divided into two distinct spaces: one side for baking, and one side for Ala-carte cooking and instruction. Dry goods storage, refrigerated storage, and pot and pan washing will support both spaces. Linking both programs to share a common set of support space makes the most sense and is the most efficient use of space. Also, by providing higher visibility and making the site accessible for community use, the students will gain real working experience and the community with benefit from having a quality small event venue available that is reasonably priced. Lastly, this in turn educates the community as to what the students can accomplish.

Base repair needs and estimate:

- Supplement existing shelving with NSF complain shelving
- Add additional work tables
- Replace exhaust hoods and add hood where missing (this may not be possible given the existing head height conditions)
- Replace the exhaust hoods and add UD system to neaten the piping assemblies between the hoods.
- Update all finishes to comply with current code requirements
- Provide adequate employee support areas such as lockers, toilets, and office space
- Provide changing space for students to change into whites and place personal belongings
- Replace broken and failing equipment
- Add a chefs line to the ala carte foo preparation area

Base repair foodservice equipment budget – $280,000

Future Recommendations for Feasibility Study:

- Culinary Arts instructional Area – 4,800 square feet
- Seating area and retail – 3,100 square feet
- Separate the baking and ala carte programs by function
- Add support areas such as refrigerated storage and dry goods storage.

Foodservice equipment budget – $700,000

LORD/FIELD HOUSE

The school foodservice program will benefit from a complete reorganization. The priority must be to link the high school kitchen and servery into a contiguous space. Doing this will improve the delivery of food and allow for better distribution of labor resources. The kitchen must be reorganized to update the workflow to better reflect the current food program and to meet modern kitchen requirements. Improvements to the servery must address flow so that the various serving lines can flow freely and quickly without crossing travel paths.

Base repair needs and estimate:

- Supplement existing shelving with NSF complain shelving
- Add additional work tables
- Replace or repair walk-in rooms.
- Relocate walk-in cooler and freezer compressor to the outdoors.

- Replace the exhaust hoods and add UD system to neaten the piping assemblies between the hoods.
- Add rotating rack ovens for redundancy adequate cooking capacity
- Add air screen to back door
- Replace defunct reach-in point of use refrigerators
- Provide adequate support table for the pot and pan washing area
- Provide adequate employee support areas such as lockers, toilets, and office space

Base repair foodservice equipment budget – $380,000

Future Recommendations for Feasibility Study:

- Relocate the servery so that is adjacent to the kitchen
- Provide all new equipment and storage facilities
- Organize the kitchen function and flow to better serve the modern foodservice program

New kitchen and servery budget – $680,000

FRESHMAN ACADEMY BUILDING – SERVING AREA

The freshman Academy is in need of two serving lines and appropriate support spaces for storage and limited food preparation. The ability to re-heat food if need is also major benefit to the remote serving area. Adequate storage, clean up space, and security is also required.

Base repair needs and estimate:

- Replace wood shelving with NSF complain shelving
- Add a dedicated hand washing sink
- Provide adequate service counter and racks better secure the area outside the serving area.

Base repair foodservice equipment budget – $10,000

Future Recommendations for Feasibility Study:

- New serving area – 900 to 1,000 square feet
- Combine all serving within a common are that can be secured when not in use.
- Provide hand mean to reheat food if temperatures are outside acceptable limits

New foodservice equipment budget – $160,000

MEMORANDUM

To:	Alicia Caritano Perkins Eastman Architects
From:	Alicia Svenson
Date:	October 6, 2016
Project:	Lowell High School Existing Conditions Evaluation / Base Repair Historic Preservation Regulatory Review

Building Conservation Associates, Inc. (BCA) was contracted to research the historic status of four existing buildings as part of the feasibility study for Lowell High School for the Massachusetts School Building Authority (MSBA). The goal of the research was to determine which state, local or national inventories of historic properties or historic districts the buildings are located within and identify issues that should be taken into account during the project planning process. The following properties were researched:

- Kouloheras Building
- Lord/Fieldhouse Buildings
- Freshman Academy
- Steam Plant

BUILDING HISTORY SUMMARIES

Kouloheras Building

The original portion of the Kouloheras Building was constructed as the Lowell High School in 1892, designed by the architectural firm Stickney & Austin who had offices in Lowell and Boston. The building was built in the Renaissance Revival style and was notable for its use of yellow brick, which was uncommon in Lowell at the time, and granite and terra cotta trim. The building has been extensively added to and altered since its construction. In 1922 a three-story addition was added to the north side of the school. The addition, designed by architect H. L. Rourke of Lowell, connects to the original school building via passages on the east and west. It was also built in yellow brick with granite and terra cotta trim, but is much simpler in style than the original school building. Arched windows are located periodically across the east and west elevations, echoing the arched windows at the original building. A small interior courtyard is located between the two buildings. The windows of both buildings have been replaced with windows that are not in keeping with the historic character of the building. In 1997 a further addition was added to the north end of the 1922 addition. The design of the new addition is similar to the 1922 addition although cast stone was used for trim.

Lord/Fieldhouse Buildings
The Lord/Fieldhouse buildings were added to the High School complex on the west side of the Western Canal in 1980. They are red brick structures with cast stone trim designed by Sverdrup Facilities Inc. and HMFH Architects. The design included two passageways at the second floor level that cross over the canal and connect these buildings to the Kouloheras building's 1922 addition.

Freshman Academy
The building now known as Freshman Academy consists of the former Lowell High School Commercial and Manual Training Department (Trade High School), constructed in 1900-1901 and the High School Annex building, constructed in 1939. Both buildings were designed by architect Harry Prescott Graves, of Lowell, in red brick with granite trim. The Annex building, on French Street, was a Federal Works Agency project.

Steam Plant
Date of construction for the red brick steam plant building is not on file at the Massachusetts Historical Commission, but photographs show that the steam plant building was likely constructed at the same time as the High School addition in 1922.

REGULATORY RESEARCH SUMMARY

The Lowell National Historical Park and Preservation District was authorized by Congress in 1978. The Downtown Lowell Historic District (DLHD) was created by Special Act of the Massachusetts Legislature in 1983 (and was expanded in 1986 and 2004). The National Historical Park boundaries include the power canal system, a portion of the central business district, and three major mill complexes – areas intended for intensive visitor use and interpretation of the history of Lowell. The Preservation District and DLHD includes these areas, but also extends to the remaining portion of the central business district and other historic mill sites and smaller factories. Air rights over the canals are owned by the State Department of Conservation and Recreation (DCR).

All of the properties associated with the Lowell High School study, including the 1980 Lord/Fieldhouse buildings are located within the Lowell National Historical Park and Preservation District, putting them on the National Register of Historic Places and the State Register of Historic Places. In addition, all of the buildings are located within the Downtown Lowell Historic District. Work on these properties will be subject to review by the Massachusetts Historical Commission (MHC), the Lowell Historic Board, and the National Park Service. Once a Project Notification Form is submitted to the MHC for review the MHC will reach out to the Lowell Historic Board and National Park Service for assistance with the design review process.

The scope of review of the Lowell Historic Board includes:

> The erection, demolition, reconstruction, or alteration of any exterior feature (and interior when work affects the exterior appearance) of any building, structure, or parcel including, but not limited to, alteration of the site topography or general architectural arrangement of such portion of the exterior as designed to be open to view from any street, canal, or way open to public or private vehicular or pedestrian travel.[1]

The work will be reviewed by the *Secretary of the Interior's Standards for the Treatment of Historic Properties* and by the Lowell Historic Board's *Downtown Historic District Design Review Standards*. These two publications are similar, and provide recommendations for work rather than listing requirements to allow for flexibility within projects. The *Downtown Historic District Design Review Standards* are specific to Lowell, and are likely to be most applicable to any project contemplated for the High School complex. It should be noted that the DCR might also be involved with the review process if alterations are made to the passageways crossing the canals between the buildings of the High School complex that trigger air rights review.

HISTORIC PRESERVATION GUIDELINES

While all of the buildings are located within Lowell's national and local historic districts and are thus subject to design review, there will be different levels of review for the different structures based on age and level of architectural and historic significance.

Kouloheras Building
Work at the Kouloheras Building, especially the 1882 portion of the building, will be the most scrutinized. Alterations to this building that change its exterior appearance or character are not likely to be approved. Alterations that improve accessibility or have other tangible benefits to the school that are designed to be compatible with the historic structure are more likely to be approved. Alterations that help bring the structure closer to its original appearance, for instance, replacing the existing aluminum windows with new aluminum windows with profiles and glazing patterns that match original window profiles are encouraged.

Lord/Fieldhouse Buildings
While in the historic district, these buildings are less than fifty years old. Character-changing alterations are likely to be more acceptable for these buildings. It is also possible that demolition or partial demolition might be considered.

Freshman Academy and Steam Plant
While not as significant as the Kouloheras Building, these buildings are important to the fabric of the historic district. Guidelines for alterations are similar to those noted for the Kouloheras building above, although there may be more flexibility, particularly at less prominent elevations.

[1] Downtown Lowell Historic District Permitting Process Fact Sheet
http://www.lowellma.gov/dpd/devservices/historic/Documents/DLHD%20Process%20Factsheet.pdf

Downtown Lowell Historic District (DLHD) Design Review Standards

The current Design Review Standards, dated January 9, 2012 (attached) provide guidelines for any project considered during the feasibility study. Important elements from the standards that should be considered early in the feasibility study include:

2.0 EXISTING STRUCTURES

2.1 Removal of Structures

2.10 Demolition

2.101 There shall be a presumption toward retaining all existing buildings except those rated "D" in the Index of the document entitled "Details of the Preservation Plan," published by the Lowell Historic Preservation Commission (available from the Historic Board Administrator).[2]

2.102 Demolition shall be allowed only when the new construction relates better to the Historic District than does the existing building, and when all the other requirements below are satisfied.

2.3 Changes to Structures

2.30 General Principles

2.301 Historic Architectural Character

2.3011 The historic architectural character of each building shall be maintained or restored. Buildings shall be rehabilitated to reveal their historic materials and details. Missing architectural elements shall be recreated wherever feasible. Significant existing materials shall be retained wherever possible, by stabilizing, repairing or matching them with compatible new materials as required.

3.0 NEW CONSTRUCTION

3.1 General Principles

3.10 Character: New construction on currently vacant sites shall be encouraged to create a tightly-knit urban environment reflecting Lowell's traditional character, embodied in the compactness and richness of its building types.

3.11 Continuity: New buildings should not be designed as free-standing objects, but instead shall generally conform with the tradition of continuous structures holding the lines of streets, canals and riverfronts. The creation of interior courtyard spaces is encouraged.

3.14 Contemporary Approaches: New buildings shall generally utilize contemporary design ideas, but shall also respect and reflect the traditional scale, proportions, rhythms, and mood of historic structures. These traditional architectural values should be interpreted into

[2] Despite their relatively recent date of construction, the Lord/Fieldhouse building are rated "C" in this plan. Rating C is defined as "Properties that do not meet criteria, but which do not have a negative impact." The Kouloheras, Freshman Academy, and steam plant buildings are all in the "A" (nationally significant) and "B" (locally significant) categories.

contemporary building design, but the use of imitation historic building details and ornaments is discouraged. Building design must also be internally consistent, and amalgamations of historically unrelated stylistic elements shall generally be prohibited.

5.0 OTHER DEVELOPMENTS

5.4 Open Space

5.40 Canal and River Banks

5.401 The historic character and the environments associated with canal and river banks shall be protected.

5.402 Public pedestrian access, safety, and enjoyment shall be considered when construction is proposed adjacent to a canal or river.

5.41 Urban Parks

5.411 Existing parks shall be preserved and enhanced.

5.6 Canalway Development

5.60 New structures shall be oriented toward the Canals not only visually, but also functionally wherever practicable. Two "fronts," one facing the Canal, should be designed for every new building constructed along the Canalway.

5.61 An urban edge (line of buildings) shall be maintained along Canal banks except in landscaped areas developed for private or public space.

PROCESS

While the review process will begin at the MHC, most of the design review itself will be performed by the Lowell Historic Board. It is recommended that the Board be involved early in the design process to allow for discussion and incorporation of comments into design.

Lowell High School Existing Conditions Evaluation / Base Repair HVAC Report
Lowell, MA
Project No. 67150.00
L#53830/Page 1/October 21, 2016

Introduction:

In general, the majority of the heating, cooling, ventilation, and automatic temperature controls and building management systems have reached or exceeded their expected useful service life and are generally in poor condition. The existing heating, ventilation and air conditioning system appears to have been well maintained, and various portions of the HVAC system have been repaired, upgraded or replaced over the years in order to keep the system functional. However, due to the age and general poor condition of the majority of the HVAC equipment, distribution systems, and system components, we recommend that the building HVAC equipment be replaced in its entirety.

The majority of building HVAC systems lack adequate temperature control due to the antiquated pneumatic control system and multiple failures in recent years of the of the system including: thermostat, control damper and steam and hot water valve failures; rooftop unit, rooftop boiler heater, compressor and fan failures, and air handling unit fan and coil failures.

Many of existing systems appear to have lower ventilation capacities and energy efficiency than required by current codes. Therefore, the existing HVAC system should also be upgraded to meet current code requirements for ventilation and energy efficiency, and energy conservation measures (such as energy recovery, variable speed drives for fans and pumps, low pressure ductwork and piping distribution system design, and state of the art direct digital controls and building energy management system) should be designed as part of a new replacement HVAC system.

The following existing conditions report and recommendations summary provides additional information pertaining to the HVAC system.

Kouloheras (1892, 1922 & 1997 Addition) Building:

Heating and Air Conditioning Systems:

The mechanical rooms within this building are equipped with shell and tube steam to hot water heat exchangers that utilize steam from the Steam Plant to provide hot water to the Kouloheras building. Steam and condensate piping is routed from the mechanical room to the Steam Plant via an underground tunnel. Steam condensate is returned to the Steam Plant by a condensate pump. Hot water is circulated throughout the building with the use of (2) end suction base mounted Bell & Gossett pumps (model 1510 pumps, equipped with 25 HP motors). VFD drives have been installed in recent years for the pumps. The pumps, heat exchanger, condensate pump, and associated piping and valving appears to be in poor condition and beyond its useful expected service life.

Shell and Tube heat exchangers appear to have corrosion on them, replacement in the near future should be considered. Insulation on equipment appears soiled and in some locations damaged, or missing, and should be replaced as needed. Pumps appear to have corrosion forming on the impeller casing, repair as needed is recommended.

Steam to Hot Water Heat Exchanger

Condensate Pump

Hot Water Pumps

Steam and Condensate Piping in Tunnel

Within one of the mechanical rooms is a 106 ton Carrier indoor chiller which is associated with a refrigerant outdoor condenser also of the Carrier manufacture. Chilled water is delivered to RTU's through the use of (2) end suction base mounted Bell & Gossett pumps. The indoor chiller and associated outdoor condensing unit should be provided with yearly maintenance, and replaced in the near future.

Heat Exchanger

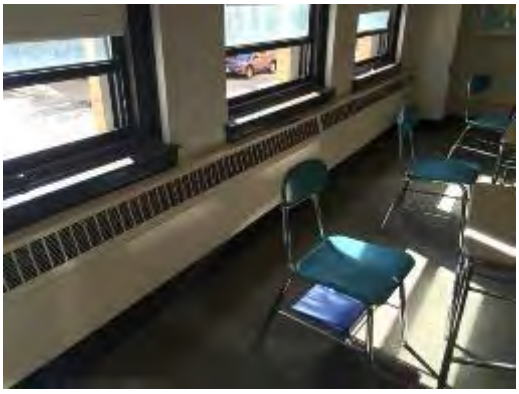
Indoor Spilt Air Cooled Chiller

Gas fired Roof Top Units provide ventilation air throughout the majority of the building. Some of the units are provided with chilled water coils for dehumidification purposes and provide constant volume to the rooms for ventilation.

Classrooms:

Typical classrooms throughout this building are provided with overhead ducted distribution systems with ceiling mounted diffusers and a combination of low and high sidewall or ceiling exhaust registers for ventilation purposes. Wall mounted fin tube radiation at the exterior walls are utilized as the main heat source for the spaces. The majority of classrooms have operable window for natural ventilation. The majority of rooms are provided with pneumatic (typically Barber Coleman) heating system thermostats while some rooms are equipped with new DDC temperature sensors for monitoring through the building management workstation.

Many of the ceiling mounted diffusers and grilles appear dirty which could be a sign of dirty filter and ductwork, it's recommended that rooftop units are replaced and ductwork be internally cleaned at a minimum or preferably replaced. It is also recommended that more DDC thermostats and control valves be installed within the building to provide a more accurate measurement of temperature for increased comfort and energy savings. Currently, several classrooms (often up to 3 classrooms) are controlled by one control valve.



Hot Water Radiation

Sidewall Exhaust Register

Basement Classrooms:

Many of the basement classrooms are heated and ventilated by classroom ceiling suspended horizontal unit ventilators. The units appear to be in poor condition and in need of replacement.

Unit Ventilator

Art Room:

The Art Classroom is heated and ventilated by an old indoor heating and ventilation unit located in the adjacent Kiln/Storage room. The unit is in poor condition. The electric Kilns do not have canopy heat capture exhaust air system installed.

Art Room H&V Unit

Kiln/Storage Room

Auditorium:

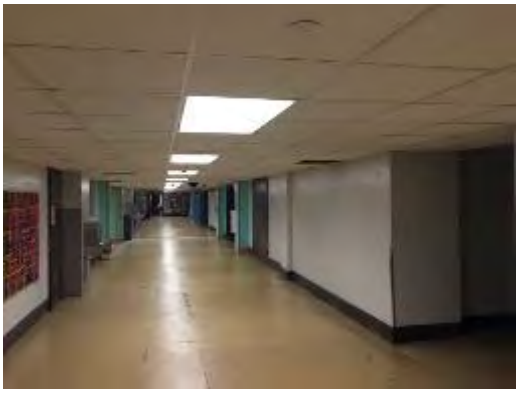
The Auditorium is served by a rooftop unit that provides heating and cooling through a ducted distribution system that terminates at the ceiling level with decorative grilles which are integrated into the ceiling design. Return air is captured below the stage through vertical grilles on the face of the stage and on the sidewall of the Auditorium. The stage itself is also supplied by this unit and has supply and return ducts high within the space for distribution. This space has a new DDC sensor for temperature monitoring and control.

Auditorium Ceiling Supply Grilles

Auditorium Sidewall Return Grille

Corridors:

The majority of corridors located with this building do not appear to have code required ventilation air. In addition, the heating equipment directly installed for the corridor areas appears to be minimal.



Basement Corridor

Lord/Fieldhouse 1980 Building:

Heating and Air Conditioning Systems:

The majority of this building is heated, ventilated and air conditioned by rooftop air handling units. One large gas-fired heating, DX cooling VAV Multi-Zone unit (manufactured by Trane – Intellipack Model) that serves the Library and Media Studio was installed in 1997, while the majority of rooftop units were installed in 2005. The rooftop units that were installed in 2005 were manufactured by Trane. Each of these units is provided with direct expansion cooling components, supply and exhaust fans, filter sections, and hot water coils. Hot water for each rooftop is generated through the use of instantaneous gas fired water heater boilers, manufactured by Rinnair. Each rooftop unit is equipped with several water heaters, which are piped into a common header. The outlet and inlet piping on the hot water coil connects to this header. All of the piping is not insulated and is exposed to the weather including the water heaters. The manner in which the piping is installed can potentially back feed water into other water heaters that may not be operating and causing a high pressure drop within the system. Due to piping not being insulated, this will cause an increased water temperature drop and force the water heaters to operate longer and harder than required to meet the design temperature. This current heating system associated with these rooftop units has been failing on a constant basis and high number of water heaters have been replaced and continue to fail.

It is recommended that all the instantaneous water heaters on all the rooftop units be removed and a new high efficiency-condensing boiler be installed within the building or within a packaged boiler room on the roof. This will generate hot water much more efficiently and provide energy savings year-round with the condensing boiler and outside air reset control. The hot water piping traveling from the boiler to the individual rooftop unit hot water coils could be installed on the roof and would be insulated and jacketed with a weather proof cover.

Rooftop Unit with Outdoor Mounted Boilers

Multi-Zone VAV Unit

Rooftop Units with Outdoor Mounted Boilers

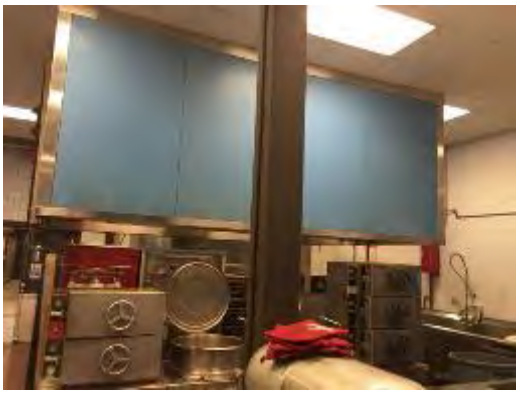
Distribution Systems:

The building HVAC system typically utilizes overhead ducted distribution systems with ceiling mounted diffusers and a mix of low, high or ceiling returns for heating, ventilation and cooling purposes. Majority of the rooms are provided with pneumatic thermostats (Barber Colman) while some rooms are equipped with electronic Trane Tracer temperature sensors. The Trane Tracer software is integrated into the direct digital control system utilized for monitoring and is graphically indicated on the building management workstation. Some areas are provided with variable air volume dampers with electric heat. These components provide individual control for specific areas through the spaces thermostat.

Many of the ceiling mounted diffusers and grilles appear dirty which could be a sign of dirty filter and ductwork, it is recommended that filters be changed quarterly and ductwork be internally cleaned at a minimum, or ideally replaced. It is recommended that more DDC thermostats be installed within the building to provide a more accurate measurement of temperature for increased comfort and energy savings.

Kitchen:

The kitchen is provided with (2) overhead cooking hoods, a pizza oven and a dishwasher that were all being exhausted by individual exhaust ducts and exhaust fans. This space is not air-conditioned and was provided with a roof mounted gas fired make up air unit utilized to maintain a neutral pressure in the kitchen once the hoods are activated. The associated make-up air unit and exhaust air fans appear to be in poor condition and in need of replacement.

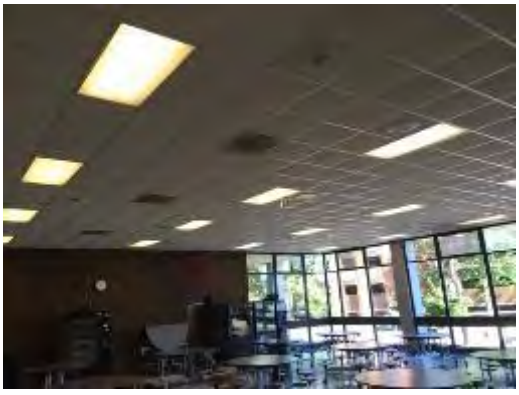


Kitchen Exhaust Hoods

Make-up Air Unit

Cafeteria:

The Cafeteria has an overhead ducted distribution system with ceiling mounted diffusers and a combination of low, high sidewall return and ceiling supply registers for heating, ventilation and cooling purposes. The exterior wall does not have fin tube radiation heating, which can cause higher energy use and reduced thermal comfort control.



Cafeteria Overhead Air Distribution

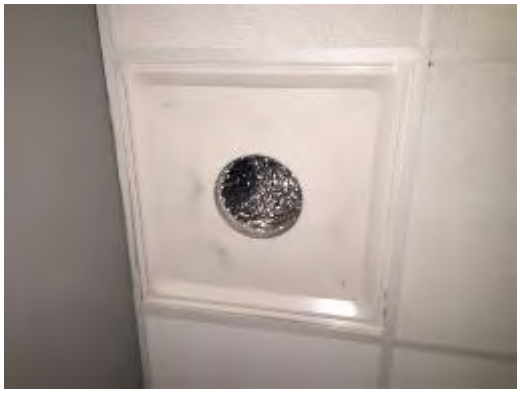
Library:

The Library has an overhead ducted distribution system with ceiling mounted diffusers and a combination of low, high sidewall return and ceiling supply registers for heating, ventilation and cooling purposes. The exterior wall does not have fin tube radiation heating, which can cause higher energy use and reduced thermal comfort control. The Library has inadequate thermostat control, and experiences times when the room is too hot and/or too cold according to the Library Staff.

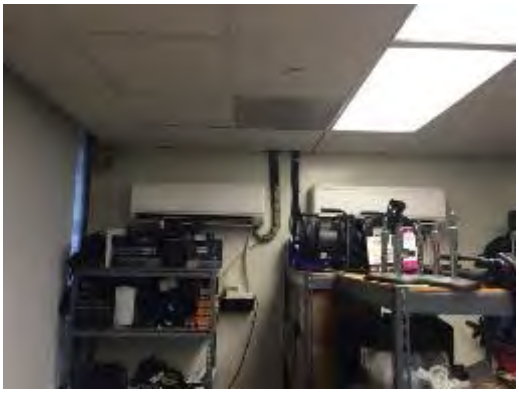
Media Studio:

The Media Studio has an overhead ducted distribution system with ceiling mounted diffusers and a combination of low, high sidewall return and ceiling supply registers for heating, ventilation and cooling purposes. Many of the ceiling supply and return registers are damaged and do not have diffuser plates and/or face grilles installed. The TV studio is served by an exposed overhead ductwork distribution system. The Control room is air conditioned by two (2) ductless AC units with associated roof mounted condensing units.

TV Studio Ductwork



Ceiling Diffuser with Missing Face Grille



Control Room Ductless AC units and associated Condensing Units

Little Theatre:

The Little Theatre has an overhead ducted distribution system with ceiling supply and return registers, which provide heating, ventilation, and cooling to the theatre.

Little Theater Overhead Air Distribution

Classrooms:

The majority of classrooms in this building are located in the interior section of the building and are heated, ventilated and air conditioned by packaged direct expansion cooling and hot water heating rooftop air handling units that were installed in 2005. The overhead ductwork distribution systems were installed in 1980. Many of the associated air distribution registers and grilles appeared to be dirty and some showed signs of damage. In general, we would recommend that the classroom rooftop units and associated ductwork distribution system are replaced.

Corridors & Entryways:

Corridors and entryways are typically heated by hot water cabinet unit heaters and convectors by a combination of hot water cabinet unit heaters, convectors and fin tube radiation heating. In general, the terminal heating equipment is in poor condition and in need of replacement. Many corridors throughout the building are not provided with code required ventilation air.

Entryway Unit Heater

Corridor Hot Water Convector

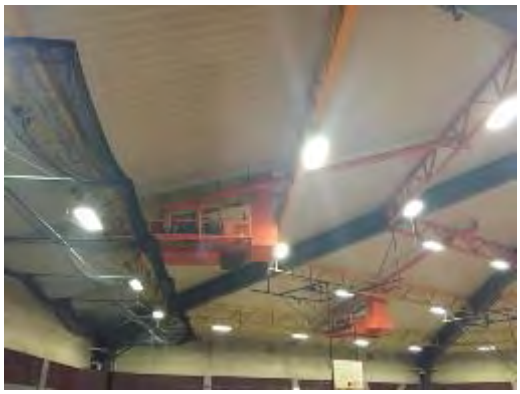
Field House:

The field house consists of several individual systems, each dedicated for a specific space/area. The pool area is served by one indoor gas/oil fired air-handling unit located in a mechanical room in the basement. Breeching for the furnace section travels up through the building and exits the roof. The oil piping is connected to the burner, however, the storage tanks have been decommissioned and oil is no longer used. A galvanized sheet metal duct distribution system carries tempered air into the pool area, where supply air is delivered into the space at a high elevation and returned at a low elevation. The air-handling unit has an associated inline return air fan that draws air from the space and back into the unit. The pool itself is heated through the use of a Bryant Flex Water Tube boiler, the piping from the boiler directly connects to the pool water piping with no heat exchanger inline. Without a heat exchanger to separate the two systems, the chemically treated pool water is traveling into the boiler, which is corrosive to the cast iron and components within the boiler. Signs of this have already appeared and becoming an issue. The breeching was recently replaced due to the corrosive nature of the space.

Pool and Pool Mechanical Room Gas-fired Air Handling Units

The locker rooms, weight room and wrestling room have similar systems with indoor gas/oil fired air handling units which provide tempered air to the spaces through ceiling mounted diffusers and registers.

The Field House is provided with (4) gas fired indoor air handling units with a single discharge and inlet grille. Associated breeching exits the roof directly above the unit. This space also has (2) inline exhaust fans, which exhaust any outside air introduced by the air-handling units to maintain a neutral pressure within the space. The entire field house is not air-conditioned, and is only provided with heating and ventilation.



Field House H&V Units and Exhaust Air Fans

Field House Intake and Exhaust Louvers

The heating and ventilation equipment within the Field House is antiquated and in need of replacement. The functional ability of these units are decreasing rapidly with squeaking motors, decreased airflow, minimal control, low gas furnace efficiencies and deteriorating insulation. It is recommended that these units be replaced with similar style gas fired air handling units or a centralized gas fired hot water condensing boiler system providing hot water to new indoor air handling units. Temperature control for this building should be enhanced and an increase of the direct digital control system currently on campus should be implemented. Air quality within the building seems to be poor and should be corrected and brought up to current standards.

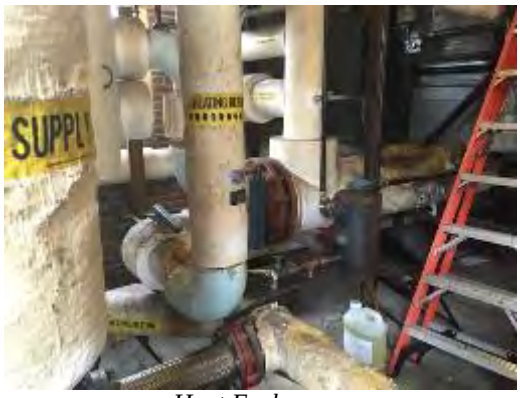
Freshman Academy Building:

Heating and Air Conditioning Systems:

The penthouse mechanical rooms located within this building is equipped with a shell and tube steam to hot water heat exchanger that utilizes steam from the Steam Plant to provide hot water to the building. Hot water is circulated throughout the building with the use of (2) end suction base mounted Bell & Gossett pumps. Condensate is returned to the Steam Plant via a condensate receiver and duplex pump set.

The shell and tube heat exchanger and condensate pump appear to have corrosion on the heat exchanger and condensate pump surfaces. Replacement of this equipment in the near future should be considered. Insulation on equipment appears soiled and in some locations damaged. The insulation should be replaced. Pumps appear to have corrosion forming on the impeller casing, and should be repaired or replaced in the near future. Pump motors should be inverted duty type for VFD applications to provide increased energy efficiency.

Hot Water Pumps



Heat Exchanger

Condensate Pump

One gas fired rooftop unit is provided for ventilation purposes for the Cafeteria, Theatre and internal areas of the building. The majority of the classroom and administration areas of the building is ventilated by a central indoor hot water heating and ventilation unit located in the mechanical room. The H&V (heating and ventilation) unit has a supply air fan, filter section and hot water heating coils. The rooftop and indoor H&V units are generally in poor condition and in need of replacement. These units are functioning poorly and may become an issue in the near future. Return air is distributed back to the H&V units or relieved to the outdoors by return air fans. In most classrooms the supply and return grilles are located very close to each other; thereby reducing the ventilation system's effectiveness.

Rooftop H&V Unit

Indoor H&V Unit

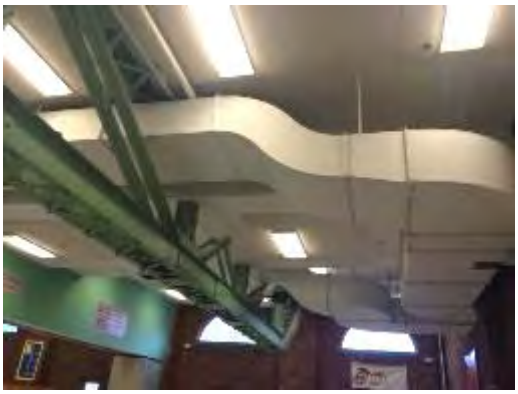
Maker Space:

A Maker Space was added as part of a renovation project last year. The Maker Space is air conditioned by three (3) ductless AC units that are piped to exterior wall mounted air cooled condensing units. The AC system appears in very good condition. The Maker Space is heated by hot water fin tube radiation heating and is ventilated by the central H&V air handling system. The fintube radiation and associated enclosure are in poor condition and in need of replacement.

Maker Space AC System

Cafeteria and Auditorium:

Within the cafe and auditorium an exposed ducted distribution system provides tempered air to the spaces. Wall mounted fin tube is also utilized in these spaces for supplemental heat. The fintube radiation and enclosure are in poor condition and in need of repair or replacement. These spaces had new DDC sensor for temperature monitoring and control. Corridors and stairwells are heated through the use of fin tube radiation and unit heaters.



Cafeteria Ductwork and Radiation Heating

Auditorium Ductwork and Radiation Heating

Classrooms:

Typical classrooms throughout this building are provided with overhead ducted distribution systems with ceiling mounted diffusers and a combination of low, high or ceiling returns for ventilation purposes. Wall mounted fin tube radiation at the exterior walls are utilized as the main heat source for the spaces. Temperature control for individual spaces utilize thermostatic control valves located on the supply side of the fin tube radiation. These valves provide a dial type control where increasing or decreasing the dial will lower or increase the space temperature. These are ineffective when trying to maintain a constant comfort level within the space. Many of the ceiling mounted diffusers and grilles appear dirty which could be a sign of dirty filter and ductwork, it is recommended that filters be changed quarterly and ductwork be internally cleaned at a minimum. It is recommended that the existing thermostatic control valves be removed and replaced with digital control valves and thermostats, and individual classroom control valves are installed to provide accurate measurements of temperature for increased comfort and energy savings.

In general, the classroom diffusers, associated ductwork, hot water fintube radiation, and associated hot water piping appear to be in poor condition and should be replaced.

Classroom – Exterior Wall Fin Tube Radiation

Steam Plant:

The main campus heating plant consists of (2) gas-fired steam Cleaver Brooks tube style boilers, each having a capacity of 24,493 MBH natural gas input. The Boilers are Cleaver Brooks Model CBI700.600.015ST boilers, which were installed in 1996. The boilers appear to be in fair physical condition on the exterior, however the boiler internal shell and tubes surfaces show signs of wear and corrosion. The boilers are nearing the end of their expected useful service life of 25 years. The Steam Plant feeds steam to the Lord/Fieldhouse and Freshman Academy buildings. Condensate return travels back to the boilers through the use of a triplex pump condensate receiver and deaerator boiler feed unit, which was manufactured by Shipco (Serial No. 15571). Breeching associated with each boiler consists of a double wall positive pressure system that combines into a common header and exits the building into a masonry stack located adjacent to the Steam Plant. Combustion air for boilers is provided through high wall mounted louvers, which are equipped with dampers which are interlocked to the boilers. Gas fired vertical unit heaters are utilized for spatial heating requirements. The Steam Plant is tied into a direct digital control network system of the Siemens manufacture and graphical representation is provided which indicates boiler operation, steam pressure, and general alarms. A combustion air control and variable speed burner blower control system, manufactured by Nexus (Model Fireye), was installed by Frank Rounds Co. was installed in recent years.

Existing Steam Boilers

Existing Steam Boiler – Corroded Shell Surface

Boiler Deaerator Feedwater Unit

Boiler Breeching & Chimney

Piping Systems:

Overall the majority of the High School campus is served by hot water and steam, and schedule 40 black steel is typically utilized for both systems. From an outwards appearance the many sections of piping appeared to be in fair condition; however, sections of pipe throughout the buildings should be cut to determine the exact interior conditions of the piping system if any of the piping system is proposed for re-use as part of a renovation project. In general, the majority of hot water piping located throughout the High School campus is nearing or has exceeded its useful expected service life and therefore should be replaced. Insulation appears to be lacking in many areas and should be replaced or provided where soiled, missing or damaged insulation is currently installed.

It is recommended that chemical treatment of the piping system should occur on a yearly basis as part of a maintain plan or contract.

Automatic Temperature Controls & Building Management System:

All the buildings on campus utilize pneumatic controls as their main control system. Compressors with refrigerant air dryer systems are installed in each building and provide compressed air to individual components throughout the building. However, in many cases the controllability and dependability of this system is failing. Many wall-mounted thermostats are disconnected or not functional and provide no occupant control. In addition to the pneumatic system, all buildings have been integrated and incorporated into a campus wide direct digital control system with one main workstation providing web access, graphical representation and limited control utilizing a Tridum Niagra platform. This DDC system is not a complete building management system and only provides the necessary controls and ability to monitor the major pieces of equipment and selected areas/rooms. Some equipment such as rooftops, air handling units, pumps and main plant boilers are provided with actual control. This system has several secondary control manufactures integrated into the Niagra platform such as Trane and Siemens. Only selected rooms throughout the campus buildings are provided with wall mounted temperature sensors that feed back to the DDC system for overall building temperature and adjustment. Currently, these two systems work in conjunction with one another to provide temperature control.

The Pneumatic system is antiquated and is generally not reliable or dependable. It is recommended that all of the pneumatic systems be removed and the DDC system be expanded or replaced to incorporate full campus DDC control and energy management. New DDC controls should be provided for all equipment such as fin tube, unit heaters, AHU, RTU, pumps, heat exchangers etc. Wall mounted thermostats should be provided for each classroom space for improved temperature control. The current ATC system control graphics should be updated to include all equipment and provide equipment alarms, trending data, optimized start for energy savings, outdoor temperature reset and damper and valve positioning feed back if it is to be re-used and expanded as part of a renovation project.

Kouloheras Building Control Panel

Lord/Fieldhouse Building Control Panel

Freshman Academy ATC Compressor

Recommendations:

- When considering the overall age and poor performance of the HVAC and automatic temperature control systems, all HVAC and ATC Control systems should be replaced. We do not recommend upgrading the components of the system on a sectional basis since the mechanical systems and their components work together as a single system. As an example, changing the boilers without the piping systems, or the classroom radiator without adding automatic controls and the piping, would not result in achieving the benefits of the investment of upgrading the components since a failure could be eminent at any point within the existing components. An interruption at any point in the system could render portions of the HVAC system inoperative, or poorly performing.

- As the building presently exists, there does not appear to be any immediate life safety concerns associated with the HVAC systems however, the building code has specific requirements relating to ventilation air of which is severely compromised within many areas of the buildings.

- Due to the antiquated portions of the automatic temperature controls system, energy consumption within the building is most likely above average when compared to similar buildings with high efficiency systems and current energy management systems. Considering the general poor condition of the HVAC system, maintenance costs and repair costs would also likely be considered above average. On a long-term basis, the only alternative to correcting the ventilation code deficiency; below average thermal comfort, high operating costs; and high maintenance and repair costs would be an overall system replacement utilizing new high efficiency HVAC systems and energy conservation design techniques.

- In general, replacing the current High School HVAC system with a high performance HVAC system would consist of the follow:

    1. Replace existing steam boiler plant with new high efficiency gas fired hot water plant and replace existing steam and hot water heating equipment with new hot water heating equipment. Remove all existing steam heating and condensate distribution piping systems.
    2. Replace existing pneumatic automatic temperature controls and newly installed DDC controls that require an upgrade with a new direct digital control building energy management system.
    3. Replace rooftop and indoor air handling units. Provide energy recovery ventilation systems to air handling systems that require higher levels of fresh air ventilation as required by code. The existing Lord/Fieldhouse Building Rooftop unit heating load should be served by the central hot water heating plant, in lieu of the currently installed packaged instantaneous boilers at each rooftop unit.
    4. The entire existing hot water and chilled water piping distribution systems should be replaced.
    5. Existing ductwork distribution systems should be replaced.
    6. Existing constant volume air handling distribution systems equipped with multi-zone dampers and hot water heating coils and associated piping and controls should be replaced and should be converted to new variable air volume boxes with reheat coils and associated piping and controls.
    7. Replace existing split air-cooled chillers with high efficiency packaged air-cooled or water cooled chiller plant(s). This would eliminate refrigeration piping within the building. Provide a high efficiency air conditioning system for all building areas that require air conditioning. Remove all Window AC units.
    8. Add isolation valves to major piping runs to improve ease of maintenance.
    9. Replace existing fin tube radiation, convectors and unit heaters throughout the building.
    10. Replace all exhaust air fans that have exceeded service life.
    11. Provide ventilation to areas not directly ventilated, e.g. corridors, select interior classrooms, and offices located throughout the building.
    12. Exhaust all copy room and rooms in which chemicals are used.

Perkins Eastman Architects

ESSENTIAL ESTIMATING

241 Boston Post Rd. West 1st Floor
Marlborough, MA 01752
508-885-1313

LOWELL HIGH SCHOOL BASE RENOVATION FEASIBILITY STUDY

Lowell, MA
11-15-16

NOTES ON ESTIMATE
This estimate was produced from drawings by Perlins Eastman dated October 27, 2016, and Narratives. Any design and engineering changes or changes produced subsequent to these documents are not included with the exception of items in the estimating clarification log and Site-Work telephone meeting November 14.

PRICING
This cost estimate reflects the probable construction costs for Lowell, MA. Costs should be escalated to the recommended mid-point of construction. Any further change in bid date will require additional escalation added and prorated to the anticipated bid date or mid point of construction. This estimate is a determination of the fair market prevailing wage value for the construction of this project as outlined. Unit prices include waste factors and sub-contractor overhead and profit. Pricing assumes a CMR contract procurement process with competitive bidding in every portion of the construction work for all subcontractors and general contracts. It is assumed that a minimum of 4 to 6 bids are received for all pertinent divisions.

CONTINGENCIES
Design Contingencies to be added of a minimum of 15.0% for renovation construction to

·allow for minor design development changes through the design phase.

Construction Contingency – a construction contingency is **NOT** included in our costs but should be added on the summary page to allow for unforeseen change orders that may arise during the construction phase.

A bid contingency is also recommended.

ITEMS SPECIFICALLY EXCLUDED FROM THIS ESSENTIAL ESTIMATE
Professional, management and design Fees included in TPC
Owner Furnished Items included in TPC
Furnishing and Equipment not specified
Temporary Facilities
Relocation expenses
Testing
Land and Finance Costs
Phasing
Overtime
Food Service Equipment & Haz Mat were furnished to us for inclusion by Perkins Eastman consultant.
Total square footage for this design was furnished to us by Perkins Eastman.
Permits
Costs for Options other than the Base Renovation.

Essential Estimating recommends that the Owner and Architect carefully review this document, including line item descriptions, scope of work, clarifications, exclusions, inclusions and assumptions, contingencies, escalation, and markups. If the project is over budget, or if there are unresolved budgeting issues, alternate system/schemes should be evaluated before proceeding with releasing the bid documents.

ESSENTIAL ESTIMATING

241 Boston Post Rd. West 1st Floor
Marlborough, MA 01752
508-885-1313

LOWELL HIGH SCHOOL FEASIBILITY STUDY 3 DETAILED BASE OPTIONS

Lowell, MA
1-26-17

NOTES ON ESTIMATE
This estimate was produced from drawings by Perlins Eastman dated January 7, 2017, and Narratives. Any design and engineering changes or changes produced subsequent to these documents are not included.

PRICING
This cost estimate reflects the probable construction costs for Lowell, MA. Costs should be escalated to the recommended mid-point of construction. Any further change in bid date will require additional escalation added and prorated to the anticipated bid date or mid point of construction. This estimate is a determination of the fair market prevailing wage value for the construction of this project as outlined. Unit prices include waste factors and sub-contractor overhead and profit. Pricing assumes a CMR contract procurement process with competitive bidding in every portion of the construction work for all subcontractors and general contracts. It is assumed that a minimum of 4 to 6 bids are received for all pertinent divisions.

CONTINGENCIES
Design Contingencies to be added of a minimum of 15.0% for reno & 10.0% New to

·allow for minor design development changes through the design phase.

Construction Contingency – a construction contingency is **NOT** included in our costs but should be added on the summary page to allow for unforeseen change orders that may arise during the construction phase.

A bid contingency is also recommended.

ITEMS SPECIFICALLY EXCLUDED FROM THIS ESSENTIAL ESTIMATE
Professional, management and design Fees included in TPC
Owner Furnished Items included in TPC
Furnishing and Equipment not specified
Temporary Facilities
Relocation expenses
Testing
Land and Finance Costs
Phasing
Overtime
Food Service Equipment & Haz Mat were furnished to us for inclusion by Perkins Eastman consultant.
Total square footage for this design was furnished to us by Perkins Eastman.
Permits
Options other than the 3 options - New -Wang site, Option 3 Add/Reno & Full Reno w Adds.

Essential Estimating recommends that the Owner and Architect carefully review this document, including line item descriptions, scope of work, clarifications, exclusions, inclusions and assumptions, contingencies, escalation, and markups. If the project is over budget, or if there are unresolved budgeting issues, alternate system/schemes should be evaluated before proceeding with releasing the bid documents.

Lowell, Massachusetts
Traffic Impact Analysis

Dear Ms. Caritano:

Bryant Associates, Inc. (Bryant) has been retained by Perkins Eastman to provide traffic analysis services for the Lowell High School. Currently, the design team is evaluating options to achieve the City's goals for the high school. The evaluation includes the assessment of the following options for the proposed high school design:

- A full renovation of the existing school,
- an addition and renovation design of the existing school [Options 1A, 2, 3, 4, and 5],
- a new building on the existing site,
- a new building on an expanded site,
- a new building at the Wang site, and
- a new building at the Cawley site.

Bryant has been part of the review of the existing site, as well as the alternative locations at the Wang site and the Cawley site. Bryant will conduct a more detailed traffic impact analysis study once the final site is selected.

Should you have any questions or comments, please do not hesitate to call Elizabeth R. Lavoie (401.834.1071) or me (401.834.1063).

Very truly yours,

BRYANT ASSOCIATES, INC.

MEMORANDUM

To:	Alicia Caritano Perkins Eastman Architects
From:	Alicia Svenson
Date:	February 16, 2017
Project:	Lowell High School, Lowell MA Design Options - Historic Preservation Regulatory Summary

HISTORIC REVIEW OVERVIEW

The following document summarizes the historic review process for Lowell High School as the project moves through the Massachusetts School Building Authority (MSBA) grant program modules. This document includes information from a conversation on February 15, 2017 with Ryan Maciej, Architectural Historian/Preservation Planner at the Massachusetts Historical Commission (MHC).

MHC Submission Timeline

The design options included in the Preliminary Design Program (PDP) submission to the MSBA, regardless of whether they involve an historic property, will need to be submitted to the MHC for review. The purpose of submitting multiple options for review is to allow the MHC to evaluate the options and provide recommendations on preferred options that minimize impact to historic resources.

Once the PDP has been submitted to the MSBA at the end of February, a Project Notification Form (PNF) should be prepared and submitted to the MHC with supporting documentation for each design option. Mr. Maciej clarified that one PNF could be submitted that included all options (previous conversations with the staff at the MHC had indicated that one form might be needed for each address).

The MHC will respond in writing within 30 days, evaluating the options listed on the PNF. They will outline which historic resources, if any, are affected by each option and will note which, if any, of the options would constitute an "adverse effect" per Commonwealth of Massachusetts Regulation (CMR) 71.05(a) through the destruction or alteration of all or part of a State Register property. They will provide their recommendations on which option to select, that should be considered during the preparation of the Preferred Schematic Report (PSR) for the MSBA. The PNF form and supporting documentation should be submitted to the MHC as soon as possible after the PDP submission to allow ample time for review before the PSR submission date in May 2017.

The design option selected in the PSR will need to be re-submitted to the MHC for review. A new PNF will be prepared for this submission. The MHC will review the selected design option and determine whether the project constitutes an "adverse effect" per CMR 71.05(a). They may also request additional information on the project beyond what is submitted if needed for their determination. If no "adverse effect" is found the MHC review process is complete. If it is determined that the project does constitute an adverse effect on an historic resource then the MSBA and City of Lowell would be required to participate in the MHC's consultation process to seek ways to avoid, minimize, or mitigate the adverse effect. At the end of the consultation process a Memorandum of Agreement (MOA) would be drafted between the MHC and the project proponents that would summarize the agreed upon avoidance or mitigation measures. This would likely include additional MHC review of project documents during the design phase.

It should be noted that all of the options that involve the existing high school complex will be subject to design review by the Lowell Historic Board regardless of whether or not there is a determination of adverse effect by the MHC by virtue of the buildings' location within the Downtown Lowell Historic District.

MEMORANDUM

To:	Alicia Caritano Perkins Eastman Architects
From:	Alicia Svenson
Date:	February 16, 2017
Project:	Lowell High School, Lowell MA Design Options – Historic Preservation

The following is a summary of known historic issues for the four conceptual design options for Lowell High School included in the Preliminary Design Program (PDP) submission to the Massachusetts School Building Authority (MSBA). This summary builds on information in BCA's Existing Conditions Report dated October 19, 2016 and Conceptual Design Options Report dated January 20, 2017 and is revised per information provided by Perkins Eastman Architects on February 8, 2017. The following options are were reviewed:

- Full Renovation
- Addition/Renovation Option 2
- Addition/Renovation (Expanded Site) Option 3
- New School at Cawley Site

SITE-SPECIFIC HISTORIC PRESERVATION ISSUES AND DESIGN GUIDELINES

Full Renovation and Addition/Renovation Options 2 and 3

As noted in the "Existing Conditions Evaluation" memorandum prepared by Building Conservation Associates on October 19, 2016, all of the properties associated with the Renovation and Addition/Renovation options are located within the Lowell National Historical Park and Preservation District. This includes the original high school building with its sections from 1892, 1922 and 1995 (hereafter referred to as the 1922 Building) and the 1980s additions to the high school (the Lord and Fieldhouse buildings) located across the canal, despite the 1980s buildings being less than fifty years old. Their presence within the Park places these buildings on the National Register of Historic Places and the State Register of Historic Places. In addition, all of the buildings are located within the Downtown Lowell Historic District and the City Hall National Register District. Air rights over the canals are owned by the State Department of Conservation and Recreation (DCR)

All work on these properties will be subject to review by the Lowell Historic Board by virtue of their presence in the Downtown Lowell Historic District. Depending on the extent of the work at the complex, additional review from the Massachusetts Historical Commission (MHC) and the National Park Service may be required. Once a Project Notification Form is submitted to the MHC for review the MHC will reach out to the Lowell Historic Board and National Park

Service for assistance with the design review process. It is likely that all options will require preparation of a Memorandum of Agreement (MOA) between the MSBA and City of Lowell with the MHC, although there is also a possibility that the MHC may defer review responsibilities to the Lowell Historic Board. The MOA will outline design review requirements throughout the project as it moves forward. Whether a MOA is required or not, it is anticipated that the Lowell Historic Board will perform the majority of the design review and it is recommended that the Board be involved early in the design process to allow for discussion and incorporation of comments into design.

While all of the buildings are subject to design review, there will be different levels of review for the different structures based on age and level of architectural and historic significance. Work at the 1922 Building, especially the 1892 portion of the building, will be the most scrutinized, whereas alterations to the 1980 Lord and Fieldhouse buildings and contemporary buildings on the expanded site will be more permissible, including alterations that require demolition. Work, including interior work, will need to follow the guidelines outlined in the *Secretary of the Interior's Standards for the Treatment of Historic Properties* and the Lowell Historic Board's *Downtown Historic District Design Review Standards.* It is likely that the DCR will also be involved with the review process due to the new two-tier bridges crossing the canals between the buildings of the high school complex.

Levels of Review – 1922 Building

Alterations to the 1922 building that change its exterior appearance or character are not likely to be approved. Alterations that improve accessibility or have other tangible benefits to the school that are designed to be compatible with the historic structure are more likely to be approved. Alterations that help bring the structure closer to its original appearance, for instance, replacing the existing aluminum windows with new aluminum windows with profiles and glazing patterns that match original window profiles are encouraged. The general principles for existing structures in the Lowell Historic Board's *Downtown Historic District Design Review Standards* are as follows*:*

2.30 General Principles

2.301 Historic Architectural Character

2.3011 The historic architectural character of each building shall be maintained or restored. Buildings shall be rehabilitated to reveal their historic materials and details. Missing architectural elements shall be recreated wherever feasible. Significant existing materials shall be retained wherever possible, by stabilizing, repairing or matching them with compatible new materials as required.

Levels of Review - Lord and Fieldhouse Buildings

Character-changing alterations, including the partial demolition called for in Addition/Renovation Option 2 and Addition/Renovation (Expanded Site) Option 3 are likely to be more acceptable for these buildings than for the 1922 building. New construction will be subject to review, per the Lowell Historic Board's *Downtown Historic District Design Review Standards. Applicable general principles for new construction in the Standards are as follows:*

3.1 General Principles

3.10 Character: New construction on currently vacant sites shall be encouraged to create a tightly-knit urban environment reflecting Lowell's traditional character, embodied in the compactness and richness of its building types.

3.11 Continuity: New buildings should not be designed as free-standing objects, but instead shall generally conform with the tradition of continuous structures holding the lines of streets, canals and riverfronts. The creation of interior courtyard spaces is encouraged.

3.14 Contemporary Approaches: New buildings shall generally utilize contemporary design ideas, but shall also respect and reflect the traditional scale, proportions, rhythms, and mood of historic structures. These traditional architectural values should be interpreted into contemporary building design, but the use of imitation historic building details and ornaments is discouraged. Building design must also be internally consistent, and amalgamations of historically unrelated stylistic elements shall generally be prohibited.

New School at Cawley Site

The Cawley site is not located in any national, state or local historic districts. The conceptual design option does not disturb either of the existing buildings on the site. It appears unlikely that there would be substantial objections from the MHC to the proposed changes to the site.

Lowell High School – FSA – Preliminary Design Program Submission

Dear Ms. Blache,

Pursuant to the Module 3 - Feasibility Study requirements and in accordance with Section 8.1.1.2 of the OPM Contract, we have reviewed and coordinated the materials associated with the enclosed Preliminary Design Program Submittal. We certify, to the best of our knowledge, that the information is accurate, complete and in full compliance with the MSBA's Feasibility Study requirements.

The School Building Committee met February 7, 2017 to approve the Preliminary Design Program and made the recommendation to the City Council to authorize Skanska USA, the Owner's Project Manager, to submit the Preliminary Design Program to the Massachusetts School Building Authority on behalf of the School District no later than February 24, 2017.

Following that meeting, the City Council met on February 7, 2017 and after much deliberation, referred the matter to the Finance Subcommittee for further review. The subcommittee met February 16, 2017: Eight members present, also voted to narrow the 10 options presented down to four finalists: the Cawley site and three renovations of the current downtown location and then referred the matter back to the full committee who are scheduled to meet February 28, 2017.

The 3.1.7 Local Actions and Approvals Certificate, certified meeting minutes and financial narrative for the Preliminary Design Program will be available after the February 28, 2017 City Council Meeting and subsequent meeting to approve minutes of that meeting.

The submittal has been attached electronically as requested by the MSBA. We look forward to our next meeting with the MSBA team, in order to review our progress with the program to date.

Please contact us should you have any questions or concerns regarding this submission.

Sincerely,

Skanska USA Building, Inc.
Mary Ann Williams
Project Executive

Perkins Eastman
